Logtalk APIs

Release v3.88.0

Paulo Moura

Jan 29, 2025

CONTENTS

xxvi

LIBRARIES

To load any library (including developer tools, ports, and contributions), use the goal logtalk_load(library_name(loader)). To run the library tests, use the goal logtalk_load(library_name(tester)). To load an entity, always load the loader file of the library that includes it to ensure that all required dependencies are also loaded and that any required flags are used. The loading goal can be found in the entity documentation.

1.1 arbitrary

category

1.1.1 arbitrary

Adds predicates for generating and shrinking random values for selected types to the library type object. User extensible.

Availability:
> logtalk_load(arbitrary(loader))

Author: Paulo Moura
Version: 2:35:1
Date: 2024-08-13

Compilation flags:
> static

Complements:
> type

Uses:
> fast_random
> integer
> list
> type

Remarks:

- Logtalk specific types: entity, object, protocol, category, entity_identifier, object_identifier, protocol_identifier, category_identifier, event, predicate.

- Prolog module related types (when the backend compiler supports modules): module, module_identifier, qualified_callable.

- Prolog base types: term, var, nonvar, atomic, atom, number, integer, float, compound, callable, ground.

- Atom derived types: non_quoted_atom, non_empty_atom, non_empty_atom(CharSet), boolean, character, in_character, char, operator_specifier, hex_char.

- Atom derived parametric types: atom(CharSet), atom(CharSet,Length), non_empty_atom(CharSet), character(CharSet), in_character(CharSet), char(CharSet).

- Number derived types: positive_number, negative_number, non_positive_number, non_negative_number.

- Float derived types: positive_float, negative_float, non_positive_float, non_negative_float, probability.

- Integer derived types: positive_integer, negative_integer, non_positive_integer, non_negative_integer, byte, in_byte, character_code, in_character_code, code, operator_priority, hex_code.

- Integer derived parametric types: character_code(CharSet), in_character_code(CharSet), code(CharSet).

- List types (compound derived types): list, non_empty_list, partial_list, list_or_partial_list, list(Type), list(Type,Length), list(Type,Min,Max), list(Type,Length,Min,Max), non_empty_list(Type), codes, chars.

- Difference list types (compound derived types): difference_list, difference_list(Type).

- List and difference list types length: The types that do not take a fixed length generate lists with a length in the [0,MaxSize] interval ([1,MaxSize] for non-empty list types).

- Predicate and non-terminal indicator types arity: These types generate indicators with an arity in the [0,MaxSize] interval.

- Other compound derived types: compound(Name,Types), predicate_indicator, non_terminal_indicator, predicate_or_non_terminal_indicator, clause, grammar_rule, pair, pair(KeyType,ValueType).

- Other types: Object::Closure, between(Type,Lower,Upper), property(Type,LambdaExpression), one_of(Type,Set), var_or(Type), ground(Type), types(Types), types_frequency(Pairs), transform(Type,Closure), constrain(Type,Closure).

- Type Object::Closure notes: Allows calling public object predicates as generators and shrinkers. The Closure closure is extended with either a single argument, the generated arbitrary value, or with two arguments, when shrinking a value.

- Type compound(Name,Types) notes: Generate a random compound term with the given name with a random argument for each type.

- Type types_frequency(Pairs) notes: Generate a random term for one of the types in a list of Type-Frequency pairs. The type is randomly selected taking into account the types frequency.

- Type transform(Type,Closure) notes: Generate a random term by transforming the term generated for the given type using the given closure.

- Type constrain(Type,Closure) notes: Generate a random term for the given type that satisfy the given closure.

- Registering new types: Add clauses for the arbitrary/1-2 multifile predicates and optionally for the shrinker/1 and shrink/3 multifile predicates. The clauses must have a bound first argument to avoid introducing spurious choice-points.

- Shrinking values: The shrink/3 should either succeed or fail but never throw an exception.

- Character sets: ascii_identifier, ascii_printable, ascii_full, byte, unicode_bmp, unicode_full.

- Default character sets: The default character set when using a parameterizable type that takes a character set parameter depends on the type.

- Default character sets: Entity, predicate, and non-terminal identifier types plus compound and callable types default to an ascii_identifier functor. Character and character code types default to ascii_full. Other types default to ascii_printable.

- Caveats: The type argument (and any type parameterization) to the predicates is not type-checked (or checked for consistency) for performance reasons.

- Unicode limitations: Currently, correct character/code generation is only ensured for XVM and SWI-Prolog as other backends do not provide support for querying a Unicode code point category.

Inherited public predicates:

(none)

- Public predicates
    - arbitrary/1
    - arbitrary/2
    - shrinker/1
    - shrink/3
    - shrink_sequence/3
    - edge_case/2
    - get_seed/1
    - set_seed/1
    - max_size/1
- Protected predicates
- Private predicates
- Operators

Public predicates

arbitrary/1

Table of defined types for which an arbitrary value can be generated. A new type can be registered by defining a clause for this predicate and adding a clause for the arbitrary/2 multifile predicate.

Compilation flags:
  static, multifile

Template:
  arbitrary(Type)
Mode and number of proofs:
  arbitrary(?callable) - zero_or_more

---

arbitrary/2

Generates an arbitrary term of the specified type. Fails if the type is not supported. A new generator can be defined by adding a clause for this predicate and registering it via the arbitrary/1 predicate.

Compilation flags:
  static, multifile

Template:
  arbitrary(Type,Term)
Meta-predicate template:
  arbitrary(::,*)
Mode and number of proofs:
  arbitrary(@callable,-term) - zero_or_one

---

shrinker/1

Table of defined types for which a shrinker is provided. A new shrinker can be registered by defining a clause for this predicate and adding a definition for the shrink/3 multifile predicate.

Compilation flags:
  static, multifile

Template:
    shrinker(Type)
Mode and number of proofs:
    shrinker(?callable) - zero_or_more

---

shrink/3

Shrinks a value to a smaller value if possible. Must generate a finite number of solutions. Fails if the type is not supported. A new shrinker can be defined by adding a clause for this predicate and registering it via the shrinker/1 predicate.

Compilation flags:
    static, multifile

Template:
    shrink(Type,Large,Small)
Mode and number of proofs:
    shrink(@callable,@term,-term) - zero_or_more

---

shrink_sequence/3

Shrinks a value repeatedly until shrinking is no longer possible returning the sequence of values (ordered from larger to smaller value). Fails if the type is not supported.

Compilation flags:
    static

Template:
    shrink_sequence(Type,Value,Sequence)
Mode and number of proofs:
    shrink_sequence(@callable,@term,-list(term)) - zero_or_one

edge_case/2

Table of type edge cases. Fails if the given type have no defined edge cases. New edge cases for existing or new types can be added by defining a clause for this multifile predicate.

Compilation flags:
    static, multifile

Template:
    edge_case(Type,Term)
Mode and number of proofs:
    edge_case(?callable,?term) - zero_or_more

---

get_seed/1

Gets the current random generator seed. Seed should be regarded as an opaque ground term.

Compilation flags:
    static

Template:
    get_seed(Seed)
Mode and number of proofs:
    get_seed(-ground) - one

---

set_seed/1

Sets the random generator seed to a given value returned by calling the get_seed/1 predicate.

Compilation flags:
    static

Template:
    set_seed(Seed)
Mode and number of proofs:
    set_seed(+ground) - one

max_size/1

User defined maximum size for types where its meaningful and implicit. When not defined, defaults to 42. When multiple definitions exist, the first valid one found is used.

Compilation flags:
    static, multifile

Template:
    max_size(Size)
Mode and number of proofs:
    max_size(?positive_integer) - zero_or_one

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

(no local declarations; see entity ancestors if any)

Operators

(none)

> ↪ See also

> type

1.2 assertions

object

1.2.1 assertions

Proxy object for simplifying the use of the assertion meta-predicates.

Availability:
  logtalk_load(assertions(loader))

Author: Paulo Moura
Version: 2:0:0
Date: 2014-04-03

Compilation flags:
  static, context_switching_calls

Extends:
  public assertions(_)

Remarks:
  (none)

Inherited public predicates:
  assertion/1 assertion/2 goal_expansion/2 term_expansion/2

- Public predicates
- Protected predicates
- Private predicates
- Operators

Public predicates

(no local declarations; see entity ancestors if any)

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

(no local declarations; see entity ancestors if any)

Operators

(none)

object

1.2.2 assertions(Mode)

A simple assertions framework. Can be used as a hook object for either suppressing assertions (production mode) or expanding them with file context information (debug mode).

Availability:
    logtalk_load(assertions(loader))

Author: Paulo Moura
Version: 2:2:2
Date: 2022-07-04

Compilation flags:
    static, context_switching_calls

Implements:
    public expanding
Uses:
    logtalk

Remarks:
    (none)

Inherited public predicates:
    goal_expansion/2 term_expansion/2

- Public predicates
  - assertion/1
  - assertion/2
- Protected predicates
- Private predicates
- Operators

Public predicates

assertion/1

Checks that an assertion is true. Uses the structured message printing mechanism for printing the results using a silent message for assertion success and a error message for assertion failure.

Compilation flags:
    static

Template:
    assertion(Goal)
Meta-predicate template:
    assertion(0)
Mode and number of proofs:
    assertion(@callable) - one

---

assertion/2

Checks that an assertion is true. Uses the structured message printing mechanism for printing the results using a silent message for assertion success and a error message for assertion failure. The context argument can be used to e.g. pass location data.

Compilation flags:
    static

Template:
    assertion(Context,Goal)
Meta-predicate template:
    assertion(*,0)
Mode and number of proofs:

assertion(@term,@callable) - one

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

(no local declarations; see entity ancestors if any)

Operators

(none)

category

1.2.3 assertions_messages

Assertions framework default message translations.

Availability:
    logtalk_load(assertions(loader))

Author: Paulo Moura
Version: 2:2:0
Date: 2018-02-20

Compilation flags:
    static

Provides:
    logtalk::message_prefix_stream/4
    logtalk::message_tokens//2

Remarks:
    (none)

Operators

(none)

1.3 assignvars

object

1.3.1 assignvars

Assignable variables (supporting backtracable assignment of non-variable terms).

Availability:
    logtalk_load(assignvars(loader))

Author: Nobukuni Kino and Paulo Moura
Version: 1:7:0
Date: 2018-07-11

Compilation flags:
    static, context_switching_calls

Implements:
    public assignvarsp

Remarks:
    (none)

Inherited public predicates:
    (<=)/2 (=>)/2 assignable/1 assignable/2

- Public predicates
- Protected predicates
- Private predicates
- Operators

Public predicates

(no local declarations; see entity ancestors if any)

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

(no local declarations; see entity ancestors if any)

Operators

(none)

protocol

1.3.2 assignvarsp

Assignable variables (supporting backtracable assignment of non-variable terms) protocol.

Availability:
    logtalk_load(assignvars(loader))

Author: Nobukuni Kino and Paulo Moura
Version: 1:0:1

Date: 2019-06-10

Compilation flags:
    static

Dependencies:
    (none)

Remarks:
    (none)

Inherited public predicates:
    (none)

- Public predicates
    - assignable/1
    - assignable/2
    - (<=)/2
    - (=>)/2
- Protected predicates
- Private predicates
- Operators
    - op(100,xfx,<=)
    - op(100,xfx,=>)

Public predicates

assignable/1

Makes Variable an assignable variable. Initial state will be empty.

Compilation flags:
    static

Template:
    assignable(Variable)
Mode and number of proofs:
    assignable(--assignvar) - one

Exceptions:
>   Variable is not a variable:
>   >   type_error(variable,Variable)

---

assignable/2

Makes Variable an assignable variable and sets its initial state to Value.

Compilation flags:
>   static

Template:
>   assignable(Variable,Value)

Mode and number of proofs:
>   assignable(--assignvar,@nonvar) - one

Exceptions:
>   Variable is not a variable:
>   >   type_error(variable,Variable)
>   Value is not instantiated:
>   >   instantiation_error

(<=)/2

Sets the state of the assignable variable Variable to Value (initializing the variable if needed).

Compilation flags:
>   static

Template:
>   Variable<=Value

Mode and number of proofs:
>   (?assignvar)<=(@nonvar) - one

Exceptions:
>   Value is not instantiated:
>   >   instantiation_error

(=>)/2

Unifies Value with the current state of the assignable variable Variable.

Compilation flags:
    static

Template:
    Variable=>Value

Mode and number of proofs:
    +assignvar=> ?nonvar - zero_or_one

Exceptions:
    Variable is not instantiated:
        instantiation_error

Protected predicates

(none)

Private predicates

(none)

Operators

op(100,xfx,<=)

Scope:
    public

op(100,xfx,=>)

Scope:
> public

1.4 base64

object

1.4.1 base64

Base64 parser and generator.

Availability:
> logtalk_load(base64(loader))

Author: Paulo Moura
Version: 0:10:0
Date: 2021-03-22

Compilation flags:
> static, context_switching_calls

Uses:
> reader

Remarks:
> (none)

Inherited public predicates:
> (none)

- Public predicates
  - parse/2
  - generate/2
- Protected predicates
- Private predicates
- Operators

Public predicates

parse/2

Parses the Base64 data from the given source (atom(Atom), chars(List), codes(List), stream(Stream), or file(Path) into a list of bytes.

Compilation flags:
    static

Template:
    parse(Source,Bytes)
Mode and number of proofs:
    parse(++compound,--list(byte)) - one_or_error

generate/2

Generates Base64 in the representation specified in the first argument (atom(Atom), chars(List), codes(List), stream(Stream), or file(Path) for the list of bytes in the second argument.

Compilation flags:
    static

Template:
    generate(Sink,Bytes)
Mode and number of proofs:
    generate(+compound,+list(byte)) - one_or_error

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

(no local declarations; see entity ancestors if any)

Operators

(none)

object

1.4.2 base64url

Base64URL parser and generator.

Availability:
>   logtalk_load(base64(loader))

Author: Paulo Moura
Version: 0:9:0
Date: 2021-03-10

Compilation flags:
>   static, context_switching_calls

Dependencies:
>   (none)

Remarks:
>   (none)

Inherited public predicates:
>   (none)

- Public predicates
    - parse/2
    - generate/2

> - Protected predicates
> - Private predicates
> - Operators

Public predicates

parse/2

Parses the Base64URL data from the given source (atom(Atom), chars(List), or codes(List) into a URL (using the same format as the source).

Compilation flags:
>   static

Template:
>   parse(Source,URL)

Mode and number of proofs:
>   parse(++compound,--types([atom,chars,codes])) - one_or_error

---

generate/2

Generates Base64URL data in the representation specified in the first argument (atom(Atom), chars(List), or codes(List) for the given URL (given in the same format as the sink).

Compilation flags:
>   static

Template:
>   generate(Sink,URL)

Mode and number of proofs:
>   generate(+compound,+types([atom,chars,codes])) - one_or_error

---

Protected predicates

(none)

Private predicates

(none)

Operators

(none)

1.5 cbor

object

1.5.1 cbor

Concise Binary Object Representation (CBOR) format exporter and importer. Uses atoms to represent decoded CBOR strings.

Availability:
    logtalk_load(cbor(loader))

Author: Paulo Moura
Version: 1:0:0
Date: 2021-03-04

Compilation flags:
    static, context_switching_calls

Extends:
    public cbor(atom)

Remarks:
    (none)

Inherited public predicates:
    generate/2 parse/2

- Public predicates

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

(no local declarations; see entity ancestors if any)

Operators

(none)

object

1.5.2 cbor(StringRepresentation)

- StringRepresentation - Text representation to be used when decoding CBOR strings. Possible values are atom (default), chars, and codes.

Concise Binary Object Representation (CBOR) format exporter and importer.

Availability:
    logtalk_load(cbor(loader))

Author: Paulo Moura
Version: 0:11:1
Date: 2021-12-06

Compilation flags:
    static, context_switching_calls

Uses:
    list

Remarks:
>   (none)

Inherited public predicates:
>   (none)

- Public predicates
  - parse/2
  - generate/2
- Protected predicates
- Private predicates
- Operators

Public predicates

parse/2

Parses a list of bytes in the CBOR format returning the corresponding term representation. Throws an error when parsing is not possible (usually due to an invalid byte sequence).

Compilation flags:
>   static

Template:
>   parse(Bytes,Term)

Mode and number of proofs:
>   parse(@list(byte),-ground) - one_or_error

---

generate/2

Generates a list of bytes in the CBOR format representing the given term. Throws an error when generating is not possible (usually due to a term that have no CBOR corresponding representation).

Compilation flags:
>   static

Template:

---

generate(Term,Bytes)

Mode and number of proofs:

generate(@ground,-list(byte)) - one_or_error

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

(no local declarations; see entity ancestors if any)

Operators

(none)

1.6 code_metrics

object

1.6.1 cc_metric

Cyclomatic complexity metric. All defined predicates that are not called or updated are counted as graph connected components (the reasoning being that these predicates can be considered entry points). The score is represented by a non-negative integer.

Availability:

logtalk_load(code_metrics(loader))

Author: Paulo Moura
Version: 0:5:2
Date: 2024-05-15

Compilation flags:

static, context_switching_calls

Imports:

- Public predicates
  - entity/1
  - file/2
  - file/1
  - directory/2
  - directory/1
  - rdirectory/2
  - rdirectory/1
  - library/2

Public predicates

entity/1

Scans an entity and prints its metric score.

Compilation flags:
> static

Template:

    entity(Entity)
Mode and number of proofs:
    entity(+term) - zero_or_one

---

file/2

Prints metric scores for all the entities defined in a loaded source file using the given options.

Compilation flags:
    static

Template:
    file(File,Options)
Mode and number of proofs:
    file(+atom,+list(compound)) - zero_or_one

---

file/1

Prints metric scores for all the entities defined in a loaded source file using default options.

Compilation flags:
    static

Template:
    file(File)
Mode and number of proofs:
    file(+atom) - zero_or_one

---

directory/2

Scans a directory and prints metric scores for all entities defined in its loaded source files using the given options.

Compilation flags:
    static

Template:
    directory(Directory,Options)
Mode and number of proofs:
    directory(+atom,+list(compound)) - one

---

directory/1

Scans a directory and prints metric scores for all entities defined in its loaded source files using default options.

Compilation flags:
    static

Template:
    directory(Directory)
Mode and number of proofs:
    directory(+atom) - one

---

rdirectory/2

Recursive version of the directory/1 predicate using the given options.

Compilation flags:
    static

Template:
    rdirectory(Directory,Options)
Mode and number of proofs:
    rdirectory(+atom,+list(compound)) - one

rdirectory/1

Recursive version of the directory/1 predicate using default options.

Compilation flags:
    static

Template:
    rdirectory(Directory)
Mode and number of proofs:
    rdirectory(+atom) - one

library/2

Prints metrics scores for all loaded entities from a given library using the given options.

Compilation flags:
    static

Template:
    library(Library,Options)
Mode and number of proofs:
    library(+atom,+list(compound)) - one

library/1

Prints metrics scores for all loaded entities from a given library using default options.

Compilation flags:
    static

Template:
    library(Library)
Mode and number of proofs:

library(+atom) - one

---

rlibrary/2

Recursive version of the library/1 predicate using the given options.

Compilation flags:
    static

Template:
    rlibrary(Library,Options)
Mode and number of proofs:
    rlibrary(+atom,+list(compound)) - one

---

rlibrary/1

Recursive version of the library/1 predicate using default options.

Compilation flags:
    static

Template:
    rlibrary(Library)
Mode and number of proofs:
    rlibrary(+atom) - one

---

all/1

Scans all loaded entities and prints their metric scores using the given options.

Compilation flags:
    static

Template:

all(Options)

Mode and number of proofs:

all(+list(compound)) - one

---

all/0

Scans all loaded entities and prints their metric scores using default options.

Compilation flags:

static

Mode and number of proofs:

all - one

---

entity_score/2

Score is a term that represents the metric score associated with a loaded entity. Fails if the metric does not apply.

Compilation flags:

static

Template:

entity_score(Entity,Score)

Mode and number of proofs:

entity_score(@entity_identifier,-ground) - zero_or_one

---

library_score/2

Score is a term that represents the metric score associated with a loaded library source files. Fails if the metric does not apply.

Compilation flags:

static

Template:
library_score(Library,Score)
Mode and number of proofs:
library_score(@atom,-ground) - zero_or_one

---

rlibrary_score/2

Score is a term that represents the metric score associated with loaded source files from a library and its sub-libraries. Fails if the metric does not apply.

Compilation flags:
static

Template:
rlibrary_score(Library,Score)
Mode and number of proofs:
rlibrary_score(@atom,-ground) - zero_or_one

---

file_score/2

Score is a term that represents the metric score associated with a loaded source file. Fails if the metric does not apply.

Compilation flags:
static

Template:
file_score(File,Score)
Mode and number of proofs:
file_score(@atom,-ground) - zero_or_one

---

directory_score/2

Score is a term that represents the metric score associated with loaded source files from a directory. Fails if the metric does not apply.

Compilation flags:
    static

Template:
    directory_score(Directory,Score)
Mode and number of proofs:
    directory_score(@atom,-ground) - zero_or_one

---

rdirectory_score/2

Score is a term that represents the metric score associated with loaded source files from a directory and its sub-directories. Fails if the metric does not apply.

Compilation flags:
    static

Template:
    rdirectory_score(Directory,Score)
Mode and number of proofs:
    rdirectory_score(@atom,-ground) - zero_or_one

---

all_score/1

Score is a term that represents the metric score associated with all loaded source files. Fails if the metric does not apply.

Compilation flags:
    static

Template:
    all_score(Score)
Mode and number of proofs:

all__score(-ground) - zero__or__one

---

format__entity__score//2

Formats the entity score for pretty printing.

Compilation flags:
    static

Template:
    format__entity__score(Entity,Score)
Mode and number of proofs:
    format__entity__score(@entity__identifier,+ground) - one

Protected predicates

process__entity/2

Processes an entity of the given kind.

Compilation flags:
    static

Template:
    process__entity(Kind,Entity)
Mode and number of proofs:
    process__entity(+atom,@entity__identifier) - one

---

process_file/2

Processes a source file using the given options.

Compilation flags:
    static

Template:
    process_file(Path,Options)
Mode and number of proofs:
    process_file(+atom,+list(compound)) - one

---

process_directory/2

Processes a directory of source files using the given options.

Compilation flags:
    static

Template:
    process_directory(Path,Options)
Mode and number of proofs:
    process_directory(+atom,+list(compound)) - one

---

process_rdirectory/2

Recursively process a directory of source files using the given options.

Compilation flags:
    static

Template:
    process_rdirectory(Path,Options)
Mode and number of proofs:
    process_rdirectory(+atom,+list(compound)) - one

---

process_library/2

Processes a library of source files using the given options.

Compilation flags:
    static

Template:
    process_library(Library,Options)
Mode and number of proofs:
    process_library(+atom,+list(compound)) - one

---

process_rlibrary/2

Recursively process a library of source files using the given options.

Compilation flags:
    static

Template:
    process_rlibrary(Library,Options)
Mode and number of proofs:
    process_rlibrary(+atom,+list(compound)) - one

---

process_all/1

Processes all loaded source code using the given options.

Compilation flags:
    static

Template:
    process_all(Options)
Mode and number of proofs:
    process_all(+list(compound)) - one

---

sub_directory/2

Enumerates, by backtracking, all directory sub-directories containing loaded files.

Compilation flags:
      static

Template:
      sub_directory(Directory,SubDirectory)
Mode and number of proofs:
      sub_directory(+atom,-atom) - one

---

sub_library/2

Enumerates, by backtracking, all library sub-libraries.

Compilation flags:
      static

Template:
      sub_library(Library,SubLibrary)
Mode and number of proofs:
      sub_library(+atom,-atom) - one

1.6.5 code_metrics_utilities

Internal predicates for analyzing source code.

Availability:
    logtalk_load(code_metrics(loader))

Author: Ebrahim Azarisooreh
Version: 0:7:0
Date: 2024-03-28

Compilation flags:
    static

Uses:
    list
    logtalk

Remarks:

- Usage: This is meant to be imported by any metric added to the system.

- Predicate Scope: This is meant for internal use by metrics only. As such, all provided predicates are protected.

Inherited public predicates:
   (none)

- Public predicates
- Protected predicates

Public predicates

(no local declarations; see entity ancestors if any)

Protected predicates

ancestor/4

True if Entity descends from Ancestor, and EntityKind and AncestorKind unify with their respective entity types.

Compilation flags:
   static

Template:
    ancestor(EntityKind,Entity,AncestorKind,Ancestor)
Mode and number of proofs:
    ancestor(?entity,?entity_identifier,?entity,?entity_identifier) - zero_or_more

---

current_entity/1

True if Entity is a currently loaded entity.

Compilation flags:
    static

Template:
    current_entity(Entity)
Mode and number of proofs:
    current_entity(?entity_identifier) - zero_or_more

---

declares_predicate/2

True if Entity declares Predicate internally.

Compilation flags:
    static

Template:
    declares_predicate(Entity,Predicate)
Mode and number of proofs:
    declares_predicate(?entity_identifier,?predicate_indicator) - zero_or_more

---

defines_predicate/2

True if Entity defines an implementation of Predicate internally. Auxiliary predicates are excluded from results.

Compilation flags:
>   static

Template:
>   defines_predicate(Entity,Predicate)

Mode and number of proofs:
>   defines_predicate(?entity_identifier,?predicate_indicator) - zero_or_more

---

defines_predicate/3

Same as defines_predicate/2, except Property is unified with a property of the predicate.

Compilation flags:
>   static

Template:
>   defines_predicate(Entity,Predicate,Property)

Mode and number of proofs:
>   defines_predicate(?entity_identifier,?predicate_indicator,?term) - zero_or_more

---

entity_calls/3

True if a predicate Caller within Entity makes a Call.

Compilation flags:
>   static

Template:
>   entity_calls(Entity,Caller,Call)

Mode and number of proofs:
>   entity_calls(?entity_identifier,?predicate_indicator,?predicate_indicator) - zero_or_one

---

entity_kind/2

True if Kind defines Entity and is one of category, protocol, or object.

Compilation flags:
    static

Template:
    entity_kind(Entity,Kind)
Mode and number of proofs:
    entity_kind(+entity_identifier,-entity) - zero_or_one

entity_property/2

True if Property is a valid property of Entity. Entity can be either a category, a protocol, or an object.

Compilation flags:
    static

Template:
    entity_property(Entity,Property)
Mode and number of proofs:
    entity_property(+entity_identifier,-term) - zero_or_more

entity_updates/3

True if a predicate Updater within Entity makes a dynamic update to Updated (by using e.g. the asserta/1 or retract/1 predicates).

Compilation flags:
    static

Template:
    entity_updates(Entity,Updater,Updated)

Mode and number of proofs:
      entity_updates(+entity_identifier,?predicate_indicator,?predicate_indicator) - zero_or_one

---

not_excluded_file/3

True if the file is not being excluded.

Compilation flags:
      static

Template:
      not_excluded_file(ExcludedFiles,Path,Basename)
Mode and number of proofs:
      not_excluded_file(+list(atom),+atom,+atom) - zero_or_one

---

Private predicates

(no local declarations; see entity ancestors if any)

Operators

(none)
object

1.6.6 coupling_metric

Computes entity efferent coupling, afferent coupling, and instability.

Availability:
      logtalk_load(code_metrics(loader))

Author: Ebrahim Azarisooreh and Paulo Moura
Version: 0:14:0
Date: 2024-03-27

Compilation flags:
      static, context_switching_calls

Imports:

> public code_metrics_utilities
> public code_metric

Uses:

> list

Remarks:

- Efferent coupling (Ce): Number of entities that an entity depends on.

- Afferent coupling (Ca): Number of entities that depend on an entity.

- Instability (I): Computed as Ce / (Ce + Ca). Measures the entity resilience to change. Ranging from 0 to 1, with 0 indicating a maximally stable entity and 1 indicating a maximally unstable entity. Ideally, an entity is either maximally stable or maximally unstable.

- Abstractness (A): Computed as the ratio between the number of static predicates with scope directives without a local definition and the number of static predicates with scope directives. Measures the rigidity of an entity. Ranging from 0 to 1, with 0 indicating a fully concrete entity and 1 indicating a fully abstract entity.

- Entity score: Represented as the compound term ce_ca_i_a(Ce,Ca,I,A).

- Dependencies count: Includes direct entity relations plus calls or dynamic updates to predicates in external objects or categories.

Inherited public predicates:

> all/0 all/1 all_score/1 check_option/1 check_options/1 default_option/1 default_options/1 directory/1 directory/2 directory_score/2 entity/1 entity_score/2 file/1 file/2 file_score/2 format_entity_score//2 library/1 library/2 library_score/2 option/2 option/3 rdirectory/1 rdirectory/2 rdirectory_score/2 rlibrary/1 rlibrary/2 rlibrary_score/2 valid_option/1 valid_options/1

Private predicates

(no local declarations; see entity ancestors if any)

Operators

(none)

object

1.6.7 dit_metric

Analyzes the depth of inheritance for objects, protocols, and categories.

Availability:
    logtalk_load(code_metrics(loader))

Author: Ebrahim Azarisooreh
Version: 0:6:1
Date: 2024-03-28

Compilation flags:
    static, context_switching_calls

Imports:
    public code_metrics_utilities
    public code_metric
Uses:
    numberlist

Remarks:

- Depth: The depth is the maximum length of a node to the root entity. Lower scores are generally better.
- Inheritance: A level of inheritance defined by either one of specialization, instantiation, extension, importation, or implementation.

- Scoring: The maximum path length is determined for each entity in question.

Inherited public predicates:

all/0 all/1 all_score/1 check_option/1 check_options/1 default_option/1 default_options/1 directory/1 directory/2 directory_score/2 entity/1 entity_score/2 file/1 file/2 file_score/2 format_entity_score//2 library/1 library/2 library_score/2 option/2 option/3 rdirectory/1 rdirectory/2 rdirectory_score/2 rlibrary/1 rlibrary/2 rlibrary_score/2 valid_option/1 valid_options/1

object

1.6.8 doc_metric

Entity and entity predicates documentation score.

Availability:

logtalk_load(code_metrics(loader))

Author: Paulo Moura
Version: 0:13:0
Date: 2022-05-05

Compilation flags:
> static, context_switching_calls

Imports:
> public code_metrics_utilities
> public code_metric

Uses:
> list
> numberlist

Remarks:

- Score range: Score is a integer percentage where a 100% score means that all expected documentation information is present.

- Score weights: The score is split by default between 20% for the entity documentation and 80% for the entity predicates documentation, Can be customized using the predicate entity_predicates_weights_hook/2.

- Score customization: The individual scores of entity info/1 pairs and predicate info/2 pairs can be customized using the entity_info_pair_score_hook/3 and predicate_info_pair_score_hook/4 predicates.

Inherited public predicates:
> all/0 all/1 all_score/1 check_option/1 check_options/1 default_option/1 default_options/1 directory/1 directory/2 directory_score/2 entity/1 entity_score/2 file/1 file/2 file_score/2 format_entity_score//2 library/1 library/2 library_score/2 option/2 option/3 rdirectory/1 rdirectory/2 rdirectory_score/2 rlibrary/1 rlibrary/2 rlibrary_score/2 valid_option/1 valid_options/1

- Public predicates
    - entity_predicates_weights_hook/2
    - entity_info_score_hook/2
    - entity_info_pair_score_hook/3
    - predicate_mode_score_hook/3
    - predicate_mode_score_hook/5
    - predicate_info_score_hook/3
    - predicate_info_pair_score_hook/4
- Protected predicates
- Private predicates
- Operators

Public predicates

entity_predicates_weights_hook/2

Relative weight between entity documentation and predicates documentation in percentage. The sum of the two values must be equal to 100.

Compilation flags:
    dynamic, multifile

Template:
    entity_predicates_weights_hook(EntityWeight,PredicatesWeight)
Mode and number of proofs:
    entity_predicates_weights_hook(?integer,?integer) - zero_or_one

---

entity_info_score_hook/2

Maximum score for entity info/1 directives.

Compilation flags:
    dynamic, multifile

Template:
    entity_info_score_hook(Entity,MaximumScore)
Mode and number of proofs:
    entity_info_score_hook(?term,?integer) - zero_or_one

---

entity_info_pair_score_hook/3

Score for relevant entity info/1 directive pairs. If defined, the entity_info_score_hook/2 predicate should be defined accordingly.

Compilation flags:
    dynamic, multifile

Template:
    entity_info_pair_score_hook(Pair,Entity,Score)

Mode and number of proofs:
  entity_info_pair_score_hook(?callable,?term,?integer) - zero_or_more

---

predicate_mode_score_hook/3

Maximum score for predicate mode/2 directives.

Compilation flags:
  dynamic, multifile

Template:
  predicate_mode_score_hook(Entity,Predicate,MaximumScore)
Mode and number of proofs:
  predicate_mode_score_hook(?term,?term,?integer) - zero_or_more

---

predicate_mode_score_hook/5

Score for a predicate mode/2 directive. If defined, the predicate_mode_score_hook/3 predicate should be
defined accordingly.

Compilation flags:
  dynamic, multifile

Template:
  predicate_mode_score_hook(Template,Solutions,Entity,Predicate,Score)
Mode and number of proofs:
  predicate_mode_score_hook(?term,?term,?term,?term,?integer) - zero_or_one

---

predicate_info_score_hook/3

Maximum score for predicate info/2 directives.

Compilation flags:
    dynamic, multifile

Template:
    predicate_info_score_hook(Entity,Predicate,MaximumScore)
Mode and number of proofs:
    predicate_info_score_hook(?term,?term,?integer) - zero_or_one

---

predicate_info_pair_score_hook/4

Score for a predicate info/2 directive pairs. If defined, the predicate_info_score_hook/3 predicate should be defined accordingly.

Compilation flags:
    dynamic, multifile

Template:
    predicate_info_pair_score_hook(Pair,Entity,Predicate,Score)
Mode and number of proofs:
    predicate_info_pair_score_hook(?callable,?term,?term,?integer) - zero_or_more

---

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

(no local declarations; see entity ancestors if any)

Operators

(none)

object

1.6.9 halstead_metric

Computes Halstead complexity numbers for an entity using a Stroud of 18.

Availability:

    logtalk_load(code_metrics(loader))

Author: Paulo Moura
Version: 1:0:0
Date: 2018-06-08

Compilation flags:

    static, context_switching_calls

Extends:

    public halstead_metric(18)

Remarks:

    (none)

Inherited public predicates:

    all/0 all/1 all_score/1 check_option/1 check_options/1 default_option/1 default_options/1
    directory/1 directory/2 directory_score/2 entity/1 entity_score/2 file/1 file/2 file_score/2

1.6.10 halstead_metric(Stroud)

- Stroud - Coefficient for computing the time required to program.

Computes Halstead complexity numbers for an entity.

Availability:
    logtalk_load(code_metrics(loader))

Author: Paulo Moura
Version: 0:10:0
Date: 2025-01-04

Compilation flags:
    static, context_switching_calls

Imports:
    public code_metrics_utilities
    public code_metric
Uses:
    list
    numberlist
    pairs

Remarks:

- Definition of operators: Predicates declared, user-defined, and called are interpreted as operators. Built-in predicates and built-in control constructs are ignored.

- Definition of operands: Predicate arguments are abstracted and interpreted as operands. Note that this definition of operands is a significant deviation from the original definition, which used syntactic literals.

- Pn: Number of distinct predicates (declared, defined, called, or updated).

- PAn: Number of predicate arguments (assumed distinct).

- Cn: Number of predicate calls/updates + number of clauses.

- CAn: Number of predicate call/update arguments + number of clause head arguments.

- EV: Entity vocabulary: EV = Pn + PAn.

- EL: Entity length: EL = Cn + CAn.

- V: Volume: V = EL * log2(EV).

- D: Difficulty: D = (Pn/2) * (CAn/An).

- E: Effort: E = D * V.

- T: Time required to program: T = E/k seconds (k is the Stroud number; defaults to 18).

- B: Number of delivered bugs: B = V/3000.

- Entity score: Represented as the compound term pn_pan_cn_can_ev_el_v_d_e_t_b/11.

Inherited public predicates:

all/0 all/1 all_score/1 check_option/1 check_options/1 default_option/1 default_options/1 directory/1 directory/2 directory_score/2 entity/1 entity_score/2 file/1 file/2 file_score/2 format_entity_score//2 library/1 library/2 library_score/2 option/2 option/3 rdirectory/1 rdirectory/2 rdirectory_score/2 rlibrary/1 rlibrary/2 rlibrary_score/2 valid_option/1 valid_options/1

object

1.7.4 logtalk

Built-in object providing message printing, debugging, library, source file, and hacking methods.

Availability:
     built_in

Author: Paulo Moura

Version: 3:1:0
Date: 2024-12-19

Compilation flags:

static, built_in, context_switching_calls, threaded

Dependencies:

(none)

Remarks:

- Default message kinds: silent, silent(Key), banner, help, comment, comment(Key), information, information(Key), warning, warning(Key), error, error(Key), debug, debug(Key), question, and question(Key).

- Printing of silent messages: By default, silent messages are not printed. These messages are only useful when intercepted.

- Printing of banner and comment messages: By default, banner and comment messages are only printed when the report flag is turned on.

- Printing of help, information, and question messages: These messages are always printed by default as they provide requested output.

- Printing of warning messages: By default, warning messages are not printed when the report flag is turned off.

- Printing of error messages: These messages are always printed by default.

- Printing of debug messages: By default, debug messages are only printed when the debug flag is turned on. The compiler suppresses debug message printing goals when compiling in optimized mode.

- Meta messages: A meta message is a message that have another message as argument and is typically used for debugging messages. Meta messages avoid the need of defining tokenizer rules for every message but can be intercepted as any other message.

- Meta message @Message: By default, the message is printed as passed to the write/1 predicate followed by a newline.

- Meta message Key-Value: By default, the message is printed as "Key: Value" followed by a newline. The key is printed as passed to the write/1 predicate while the value is printed as passed to the writeq/1 predicate.

- Meta message Format+Arguments: By default, the message is printed as passed to the format/2 predicate.

- Meta message List: By default, the list items are printed indented one per line. The items are preceded by a dash and can be @Message, Key-Value, or Format+Arguments messages. If that is not the case, the item is printed as passed to the writeq/1 predicate.

- Meta message Title::List: By default, the title is printed followed by a newline and the indented list items, one per line. The items are printed as in the List meta message.

- Meta message [Stream,Prefix]>>Goal: By default, call user-defined Goal in the context of user. The use of a lambda expression allows passing the message stream and prefix. Printing the prefix is delegated to the goal.

- Meta message [Stream]>>Goal: By default, call user-defined Goal in the context of user. The use of a lambda expression allows passing the message stream.

- Message tokens: at_same_line, tab(Expression), nl, flush, Format-Arguments, term(Term,Options), ansi(Attributes,Format,Arguments), begin(Kind,Variable), and end(Variable).

Inherited public predicates:

    (none)

- Public predicates
    - print_message/3
    - print_message_tokens/3
    - print_message_token/4
    - message_tokens//2
    - message_prefix_stream/4
    - message_prefix_file/6
    - message_hook/4
    - ask_question/5
    - question_hook/6
    - question_prompt_stream/4
    - trace_event/2
    - debug_handler/1
    - active_debug_handler/1
    - activate_debug_handler/1
    - deactivate_debug_handler/0
    - debug_handler/3
    - expand_library_path/2
    - loaded_file/1
    - loaded_file_property/2
    - file_type_extension/2
    - compile_aux_clauses/1
    - entity_prefix/2
    - compile_predicate_heads/4
    - compile_predicate_indicators/3
    - decompile_predicate_heads/4
    - decompile_predicate_indicators/4

Public predicates

print_message/3

Prints a message of the given kind for the specified component.

Compilation flags:
    static

Template:
    print_message(Kind,Component,Message)

Mode and number of proofs:
    print_message(+nonvar,+nonvar,+nonvar) - one

---

print_message_tokens/3

Print the messages tokens to the given stream, prefixing each line with the specified atom.

Compilation flags:
    static

Template:
    print_message_tokens(Stream,Prefix,Tokens)

Mode and number of proofs:
    print_message_tokens(@stream_or_alias,+atom,@list(nonvar)) - one

---

print_message_token/4

User-defined hook predicate for printing a message token (see this object remarks).

Compilation flags:
    dynamic, multifile

Template:
    print_message_token(Stream,Prefix,Token,Tokens)
Mode and number of proofs:
    print_message_token(@stream_or_alias,@atom,@nonvar,@list(nonvar)) - zero_or_one

---

message_tokens//2

User-defined hook grammar rule for converting a message into a list of tokens (see this object remarks).

Compilation flags:
    dynamic, multifile

Template:
    message_tokens(Message,Component)
Mode and number of proofs:
    message_tokens(+nonvar,+nonvar) - zero_or_one

---

message_prefix_stream/4

Message line prefix and output stream to be used when printing a message given its kind and component.

Compilation flags:
    dynamic, multifile

Template:
    message_prefix_stream(Kind,Component,Prefix,Stream)
Mode and number of proofs:
    message_prefix_stream(?nonvar,?nonvar,?atom,?stream_or_alias) - zero_or_more

---

message_prefix_file/6

Message line prefix and output file to be used when printing a message given its kind and component.

Compilation flags:
   dynamic, multifile

Template:
   message_prefix_file(Kind,Component,Prefix,File,Mode,Options)
Mode and number of proofs:
   message_prefix_file(?nonvar,?nonvar,?atom,?atom,?atom,?list(compound)) - zero_or_more

---

message_hook/4

User-defined hook predicate for intercepting message printing calls.

Compilation flags:
   dynamic, multifile

Template:
   message_hook(Message,Kind,Component,Tokens)
Mode and number of proofs:
   message_hook(+nonvar,+nonvar,+nonvar,+list(nonvar)) - zero_or_one

---

ask_question/5

Asks a question and reads the answer until the check predicate is true.

Compilation flags:
   static

Template:
   ask_question(Kind,Component,Question,Check,Answer)
Meta-predicate template:
   ask_question(*,*,*,1,*)
Mode and number of proofs:
   ask_question(+nonvar,+nonvar,+nonvar,+callable,-term) - one

---

question_hook/6

User-defined hook predicate for intercepting question asking calls.

Compilation flags:
    dynamic, multifile

Template:
    question_hook(Question,Kind,Component,Tokens,Check,Answer)
Meta-predicate template:
    question_hook(*,*,*,*,1,*)
Mode and number of proofs:
    question_hook(+nonvar,+nonvar,+nonvar,+list(nonvar),+callable,-term) - zero_or_one

question_prompt_stream/4

Prompt and input stream to be used when asking a question given its kind and component.

Compilation flags:
    dynamic, multifile

Template:
    question_prompt_stream(Kind,Component,Prompt,Stream)
Mode and number of proofs:
    question_prompt_stream(?nonvar,?nonvar,?atom,?stream_or_alias) - zero_or_more

trace_event/2

Trace event handler. The runtime calls all trace event handlers using a failure-driven loop before calling the debug event handler.

Compilation flags:
    dynamic, multifile

Template:
> trace_event(Event,ExecutionContext)

Mode and number of proofs:
> trace_event(@callable,@execution_context) - zero

Remarks:

- Unification events: Generated after a successful unification with a fact - fact(Entity,Fact,Clause,File, Line) - or a rule head - rule(Entity,Head,Clause,File,Line).

- Goal events: Generated when calling a goal: top_goal(Goal,CompiledGoal) or goal(Goal, CompiledGoal).

---

debug_handler/1

Enumerates, by backtracking, all declared debug handler providers. Define a clause for this predicate to declare a new debug handler provider.

Compilation flags:
> static, multifile

Template:
> debug_handler(Provider)

Mode and number of proofs:
> debug_handler(?object_identifier) - zero_or_more
> debug_handler(?category_identifier) - zero_or_more

---

active_debug_handler/1

Current active debug handler provider if any. There is at most one active debug handler provider at any given moment.

Compilation flags:
> static

Template:
> active_debug_handler(Provider)

Mode and number of proofs:
> active_debug_handler(?category_identifier) - zero_or_one
> active_debug_handler(?category_identifier) - zero_or_one

---

activate_debug_handler/1

Activates the given debug handler provider. There is at most one active debug handler provider at any given moment. Fails if the object or category is not declared as a debug handler provider.

Compilation flags:
    static

Template:
    activate_debug_handler(Provider)
Mode and number of proofs:
    activate_debug_handler(@object_identifier) - zero_or_one
    activate_debug_handler(@category_identifier) - zero_or_one

deactivate_debug_handler/0

Deactivates the current debug handler provider if any.

Compilation flags:
    static

Mode and number of proofs:
    deactivate_debug_handler - one

debug_handler/3

Debug event handler. Called by the runtime when the given provider is active.

Compilation flags:
    static, multifile

Template:
    debug_handler(Provider,Event,ExecutionContext)
Mode and number of proofs:

   debug_handler(+object_identifier,+callable,+execution_context) - zero_or_more
   debug_handler(+category_identifier,+callable,+execution_context) - zero_or_more

Remarks:

- Unification events: Generated after a successful unification with a fact - fact(Entity,Fact,Clause,File, Line) - or a rule head - rule(Entity,Head,Clause,File,Line).

- Goal events: Generated when calling a goal: top_goal(Goal,CompiledGoal) or goal(Goal, CompiledGoal).

---

expand_library_path/2

Expands a library alias or a library path into its absolute path. Uses a depth bound to prevent loops.

Compilation flags:
   static

Template:
   expand_library_path(LibraryPath,AbsolutePath)
Mode and number of proofs:
   expand_library_path(+atom,?atom) - zero_or_one
   expand_library_path(+callable,?atom) - zero_or_one

---

loaded_file/1

Enumerates, by backtracking, all loaded files, returning their full paths.

Compilation flags:
   static

Template:
   loaded_file(Path)
Mode and number of proofs:
   loaded_file(?atom) - zero_or_more

---

loaded_file_property/2

Enumerates, by backtracking, loaded file properties.

Compilation flags:
    static

Template:
    loaded_file_property(Path,Property)
Mode and number of proofs:
    loaded_file_property(?atom,?compound) - zero_or_more

Remarks:

- Property basename/1: Basename of the file (includes the file extension, if any).
- Property directory/1: Directory of the file (ending with a slash).
- Property mode/1: Compilation mode of the file (possible values are optimal, normal, and debug).
- Property flags/1: Explicit flags used for compiling the file.
- Property text_properties/1: List of the file text properties (encoding/1 and bom/1). Empty if no encoding/1 directive is present and the stream used for reading the file does not have a bom/1 (or equivalent) property.
- Property target/1: Full path of the generated intermediate Prolog file.
- Property modified/1: File modification time stamp (should be regarded as an opaque but otherwise comparable term).
- Property parent/1: Full path of the parent file that loaded the file.
- Property includes/2: Full path of a file included by the file and the line of the include/1 directive.
- Property includes/1: Full path of a file included by the file.
- Property library/1: Library alias for the library that includes the file.
- Property object/3: Identifier for an object defined in the file and the start and end lines of its definition.
- Property object/1: Identifier for an object defined in the file.
- Property protocol/3: Identifier for a protocol defined in the file and the start and end lines of its definition.
- Property protocol/1: Identifier for a protocol defined in the file.
- Property category/3: Identifier for a category defined in the file and the start and end lines of its definition.
- Property category/1: Identifier for a category defined in the file.

file_type_extension/2

Enumerates, by backtracking, all defined file type extensions. The defined types are: source, object, logtalk, prolog, and tmp. The source type returns both logtalk and prolog type extensions.

Compilation flags:
    static

Template:
    file_type_extension(Type,Extension)
Mode and number of proofs:
    file_type_extension(?atom,?atom) - zero_or_more

---

compile_aux_clauses/1

Compiles a list of auxiliary clauses. Can only be called during source file compilation, usually from term_expansion/2 or goal_expansion/2 hook predicate definitions.

Compilation flags:
    static

Template:
    compile_aux_clauses(Clauses)
Mode and number of proofs:
    compile_aux_clauses(@list(clause)) - one

---

entity_prefix/2

Converts between an entity identifier and the entity prefix that is used for its compiled code. When none of the arguments is instantiated, it returns the identifier and the prefix of the entity under compilation, if any.

Compilation flags:
    static

Template:
    entity_prefix(Entity,Prefix)
Mode and number of proofs:

entity_prefix(?entity_identifier,?atom) - zero_or_one

---

compile_predicate_heads/4

Compiles clause heads. The heads are compiled in the context of the entity under compilation when the entity argument is not instantiated.

Compilation flags:
    static

Template:
    compile_predicate_heads(Heads,Entity,CompiledHeads,ExecutionContext)
Mode and number of proofs:
    compile_predicate_heads(@list(callable),?entity_identifier,-list(callable),@execution_context) - zero_or_one
    compile_predicate_heads(@conjunction(callable),?entity_identifier,-conjunction(callable), @execution_context) - zero_or_one
    compile_predicate_heads(@callable,?entity_identifier,-callable,@execution_context) - zero_or_one

---

compile_predicate_indicators/3

Compiles predicate indicators. The predicate are compiled in the context of the entity under compilation when the entity argument is not instantiated.

Compilation flags:
    static

Template:
    compile_predicate_indicators(PredicateIndicators,Entity,CompiledPredicateIndicators)
Mode and number of proofs:
    compile_predicate_indicators(@list(predicate_indicator),?entity_identifier, -list(predicate_indicator)) - zero_or_one
    compile_predicate_indicators(@conjunction(predicate_indicator),?entity_identifier, -conjunction(predicate_indicator)) - zero_or_one
    compile_predicate_indicators(@predicate_indicator,?entity_identifier,-predicate_indicator) - zero_or_one

---

decompile_predicate_heads/4

Decompiles clause heads. All compiled clause heads must belong to the same entity, which must be loaded.

Compilation flags:
    static

Template:
    decompile_predicate_heads(CompiledHeads,Entity,Type,Heads)
Mode and number of proofs:
    decompile_predicate_heads(@list(callable),-entity_identifier,-atom,-list(callable)) - zero_or_one
    decompile_predicate_heads(@conjunction(callable),-entity_identifier,-atom,-conjunction(callable)) - zero_or_one
    decompile_predicate_heads(@callable,-entity_identifier,-atom,-callable) - zero_or_one

decompile_predicate_indicators/4

Decompiles predicate indicators. All compiled predicate indicators must belong to the same entity, which must be loaded.

Compilation flags:
    static

Template:
    decompile_predicate_indicators(CompiledPredicateIndicators,Entity,Type,PredicateIndicators)
Mode and number of proofs:
    decompile_predicate_indicators(@list(predicate_indicator),-entity_identifier,-atom, -list(predicate_indicator)) - zero_or_one
    decompile_predicate_indicators(@conjunction(predicate_indicator),-entity_identifier,-atom, -conjunction(predicate_indicator)) - zero_or_one
    decompile_predicate_indicators(@predicate_indicator,-entity_identifier,-atom,-predicate_indicator) - zero_or_one

execution_context/7

Execution context term data. Execution context terms should be considered opaque terms subject to change without notice.

Compilation flags:
    static

Template:
    execution_context(ExecutionContext,Entity,Sender,This,Self,MetaCallContext,CoinductionStack)
Mode and number of proofs:
    execution_context(?nonvar,?entity_identifier,?object_identifier,?object_identifier,?object_identifier,
    @list(callable),@list(callable)) - zero_or_one

Protected predicates

(none)

Private predicates

active_debug_handler_/1

Current active debug handler provider. There is at most one active debug handler provider at any given moment.

Compilation flags:
    dynamic

Template:
    active_debug_handler_(Provider)
Mode and number of proofs:
    active_debug_handler_(?entity_identifier) - zero_or_one

Operators

(none)

protocol

1.7.5 monitoring

Event handlers protocol. The handlers are automatically called by the runtime for messages sent using the ::/2 control construct from objects or categories compiled with the events flag set to allow.

Availability:
> built_in

Author: Paulo Moura
Version: 1:2:0
Date: 2018-11-29

Compilation flags:
> static, built_in

Dependencies:
> (none)

Remarks:
> (none)

Inherited public predicates:
> (none)

- Public predicates
  - before/3
  - after/3
- Protected predicates
- Private predicates
- Operators

Public predicates

before/3

Event handler for before events. A before event handler may prevent a method from being looked up or called by failing.

Compilation flags:
    static

Template:
    before(Object,Message,Sender)
Mode and number of proofs:
    before(?term,?term,?term) - zero_or_more

---

after/3

Event handler for after events. An after event handler may prevent a method from succeeding by failing.

Compilation flags:
    static

Template:
    after(Object,Message,Sender)
Mode and number of proofs:
    after(?term,?term,?term) - zero_or_more

Protected predicates

(none)

Private predicates

(none)

Operators

(none)

object

1.7.6 user

Pseudo-object representing the plain Prolog database. Can be used as a monitor by defining before/3 and after/3 predicates. Can be used as a hook object by defining term_expansion/2 and goal_expansion/2 multifile and dynamic predicates.

Availability:

     built_in

Author: Paulo Moura

Version: 1:6:0

Date: 2024-11-11

Compilation flags:

     static, built_in, context_switching_calls, dynamic_declarations, threaded

Implements:

     public expanding

     public forwarding

     public monitoring

Uses:

     user

Remarks:

     (none)

Inherited public predicates:

     after/3 before/3 forward/1 goal_expansion/2 term_expansion/2

- Public predicates
- Protected predicates

- Private predicates
- Operators

Public predicates

1.8 coroutining

object

1.8.1 coroutining

Coroutining predicates.

Availability:
    logtalk_load(coroutining(loader))

Author: Paulo Moura
Version: 0:5:0
Date: 2021-12-17

Compilation flags:
    static, context_switching_calls

Dependencies:
    (none)

Remarks:

- Supported backend Prolog systems: ECLiPSe, XVM, SICStus Prolog, SWI-Prolog, Trealla Prolog, and YAP.

Inherited public predicates:
     (none)

- Public predicates
    - dif/2
    - dif/1
    - freeze/2
    - frozen/2
    - when/2
- Protected predicates
- Private predicates
- Operators

Public predicates

dif/2

Sets a constraint that is true iff the two terms are different.

Compilation flags:
     static

Template:
     dif(Term1,Term2)
Mode and number of proofs:
     dif(+term,+term) - zero_or_one

dif/1

Sets a set of constraints that are true iff all terms in a list are different.

Compilation flags:
    static

Template:
    dif(Terms)
Mode and number of proofs:
    dif(+list(term)) - zero_or_one

---

freeze/2

Delays the execution of a goal until a variable is bound.

Compilation flags:
    static

Template:
    freeze(Variable,Goal)
Meta-predicate template:
    freeze(*,0)
Mode and number of proofs:
    freeze(+term,+callable) - zero_or_more

---

frozen/2

Unifies Goal with the goal delayed by Variable. When no goals are frozen on Variable, Goal is unified with true.

Compilation flags:
    static

Template:
    frozen(Variable,Goal)
Mode and number of proofs:

frozen(@var,--callable) - one

---

when/2

Calls Goal when Condition becomes true. The portable conditions are: nonvar/1, ground/1, (,)/2, and (;)/2.

Compilation flags:
    static

Template:
    when(Condition,Goal)
Meta-predicate template:
    when(*,0)
Mode and number of proofs:
    when(+callable,+callable) - zero_or_more

    - read_stream_by_line/2
    - write_file/3
    - write_stream/3
    - guess_separator/2

Public predicates

read_file/3

Reads a CSV file saving the data as clauses for the specified object predicate. Fails if the file cannot be parsed.

Compilation flags:
    static

Template:
    read_file(File,Object,Predicate)
Mode and number of proofs:
    read_file(+atom,+object_identifier,+predicate_indicator) - zero_or_one

Exceptions:
    File is a variable:
        instantiation_error
    File is neither a variable nor an atom:
        type_error(atom,File)
    File is an atom but not an existing file:
        existence_error(file,File)
    File is an existing file but cannot be opened for reading:
        permission_error(open,source_sink,File)
    Object is a variable:
        instantiation_error
    Object is neither a variable nor an object identifier:
        type_error(object_identifier,Object)
    Object is a valid object identifier but not an existing object:
        existence_error(object,Object)
    Predicate is a variable:
        instantiation_error
    Predicate is neither a variable nor a predicate indicator:
        type_error(predicate_indicator,Predicate)
    Predicate is a valid predicate indicator but not an existing public predicate:
        existence_error(predicate,Predicate)

read_stream/3

Reads a CSV stream saving the data as clauses for the specified object predicate. Fails if the stream cannot be parsed.

Compilation flags:
    static

Template:
    read_stream(Stream,Object,Predicate)
Mode and number of proofs:
    read_stream(+stream_or_alias,+object_identifier,+predicate_indicator) - zero_or_one

Exceptions:
    Stream is a variable:
        instantiation_error
    Stream is neither a variable nor a stream-term or alias:
        domain_error(stream_or_alias,Stream)
    Stream is not an open stream:
        existence_error(stream,Stream)
    Stream is an output stream:
        permission_error(input,stream,Stream)
    Stream is a binary stream:
        permission_error(input,binary_stream,Stream)
    Object is a variable:
        instantiation_error
    Object is neither a variable nor an object identifier:
        type_error(object_identifier,Object)
    Object is a valid object identifier but not an existing object:
        existence_error(object,Object)
    Predicate is a variable:
        instantiation_error
    Predicate is neither a variable nor a predicate indicator:
        type_error(predicate_indicator,Predicate)
    Predicate is a valid predicate indicator but not an existing public predicate:
        existence_error(predicate,Predicate)

read_file/2

Reads a CSV file returning the data as a list of rows, each row a list of fields. Fails if the file cannot be parsed.

Compilation flags:
    static

Template:
    read_file(File,Rows)
Mode and number of proofs:
    read_file(+atom,-list(list)) - zero_or_one

Exceptions:
    File is a variable:
        instantiation_error
    File is neither a variable nor an atom:
        type_error(atom,File)
    File is an atom but not an existing file:
        existence_error(file,File)
    File is an existing file but cannot be opened for reading:
        permission_error(open,source_sink,File)

---

read_stream/2

Reads a CSV stream returning the data as a list of rows, each row a list of fields. Fails if the stream cannot be parsed.

Compilation flags:
    static

Template:
    read_stream(Stream,Rows)
Mode and number of proofs:
    read_stream(+stream_or_alias,-list(list)) - zero_or_one

Exceptions:
    Stream is a variable:
        instantiation_error
    Stream is neither a variable nor a stream-term or alias:

domain_error(stream_or_alias,Stream)

Stream is not an open stream:

existence_error(stream,Stream)

Stream is an output stream:

permission_error(input,stream,Stream)

Stream is a binary stream:

permission_error(input,binary_stream,Stream)

---

read_file_by_line/3

Reads a CSV file saving the data as clauses for the specified object predicate. The file is read line by line. Fails if the file cannot be parsed.

Compilation flags:

static

Template:

read_file_by_line(File,Object,Predicate)

Mode and number of proofs:

read_file_by_line(+atom,+object_identifier,+predicate_indicator) - zero_or_one

Exceptions:

File is a variable:

instantiation_error

File is neither a variable nor an atom:

type_error(atom,File)

File is an atom but not an existing file:

existence_error(file,File)

File is an existing file but cannot be opened for reading:

permission_error(open,source_sink,File)

Object is a variable:

instantiation_error

Object is neither a variable nor an object identifier:

type_error(object_identifier,Object)

Object is a valid object identifier but not an existing object:

existence_error(object,Object)

Predicate is a variable:

instantiation_error

Predicate is neither a variable nor a predicate indicator:

type_error(predicate_indicator,Predicate)

Predicate is a valid predicate indicator but not an existing public predicate:

existence_error(predicate,Predicate)

---

read_stream_by_line/3

Reads a CSV stream saving the data as clauses for the specified object predicate. The stream is read line by line. Fails if the stream cannot be parsed.

Compilation flags:
    static

Template:
    read_stream_by_line(Stream,Object,Predicate)
Mode and number of proofs:
    read_stream_by_line(+stream_or_alias,+object_identifier,+predicate_indicator) - zero_or_one

Exceptions:
    Stream is a variable:
        instantiation_error
    Stream is neither a variable nor a stream-term or alias:
        domain_error(stream_or_alias,Stream)
    Stream is not an open stream:
        existence_error(stream,Stream)
    Stream is an output stream:
        permission_error(input,stream,Stream)
    Stream is a binary stream:
        permission_error(input,binary_stream,Stream)
    Object is a variable:
        instantiation_error
    Object is neither a variable nor an object identifier:
        type_error(object_identifier,Object)
    Object is a valid object identifier but not an existing object:
        existence_error(object,Object)
    Predicate is a variable:
        instantiation_error
    Predicate is neither a variable nor a predicate indicator:
        type_error(predicate_indicator,Predicate)
    Predicate is a valid predicate indicator but not an existing public predicate:
        existence_error(predicate,Predicate)

read_file_by_line/2

Reads a CSV file returning the data as a list of rows, each row a list of fields. The file is read line by line. Fails if the file cannot be parsed.

Compilation flags:
    static

Template:
    read_file_by_line(File,Rows)
Mode and number of proofs:
    read_file_by_line(+atom,-list(list)) - zero_or_one

Exceptions:
    File is a variable:
        instantiation_error
    File is neither a variable nor an atom:
        type_error(atom,File)
    File is an atom but not an existing file:
        existence_error(file,File)
    File is an existing file but cannot be opened for reading:
        permission_error(open,source_sink,File)

read_stream_by_line/2

Reads a CSV stream returning the data as a list of rows, each row a list of fields. The stream is read line by line. Fails if the stream cannot be parsed.

Compilation flags:
    static

Template:
    read_stream_by_line(Stream,Rows)
Mode and number of proofs:
    read_stream_by_line(+stream_or_alias,-list(list)) - zero_or_one

Exceptions:
    Stream is a variable:
        instantiation_error
    Stream is neither a variable nor a stream-term or alias:

domain_error(stream_or_alias,Stream)

Stream is not an open stream:

existence_error(stream,Stream)

Stream is an output stream:

permission_error(input,stream,Stream)

Stream is a binary stream:

permission_error(input,binary_stream,Stream)

---

write_file/3

Writes a CSV file with the data represented by the clauses of the specified object predicate.

Compilation flags:

static

Template:

write_file(File,Object,Predicate)

Mode and number of proofs:

write_file(+atom,+object_identifier,+predicate_indicator) - one

Exceptions:

File is a variable:

instantiation_error

File is neither a variable nor an atom:

type_error(atom,File)

File is an atom but cannot be opened for writing:

permission_error(open,source_sink,File)

Object is a variable:

instantiation_error

Object is neither a variable nor an object identifier:

type_error(object_identifier,Object)

Object is a valid object identifier but not an existing object:

existence_error(object,Object)

Predicate is a variable:

instantiation_error

Predicate is neither a variable nor a predicate indicator:

type_error(predicate_indicator,Predicate)

Predicate is a valid predicate indicator but not an existing public predicate:

existence_error(predicate,Predicate)

---

write_stream/3

Writes a CSV stream with the data represented by the clauses of the specified object predicate.

Compilation flags:
    static

Template:
    write_stream(Stream,Object,Predicate)
Mode and number of proofs:
    write_stream(+stream_or_alias,+object_identifier,+predicate_indicator) - one

Exceptions:
    Stream is a variable:
        instantiation_error
    Stream is neither a variable nor a stream-term or alias:
        domain_error(stream_or_alias,Stream)
    Stream is not an open stream:
        existence_error(stream,Stream)
    Stream is an input stream:
        permission_error(output,stream,Stream)
    Stream is a binary stream:
        permission_error(output,binary_stream,Stream)
    Object is a variable:
        instantiation_error
    Object is neither a variable nor an object identifier:
        type_error(object_identifier,Object)
    Object is a valid object identifier but not an existing object:
        existence_error(object,Object)
    Predicate is a variable:
        instantiation_error
    Predicate is neither a variable nor a predicate indicator:
        type_error(predicate_indicator,Predicate)
    Predicate is a valid predicate indicator but not an existing public predicate:
        existence_error(predicate,Predicate)

guess_separator/2

Guesses the separator used in a given file, asking the user to confirm.

Compilation flags:
    static

Template:
    guess_separator(File,Separator)
Mode and number of proofs:
    guess_separator(+atom,-atom) - one

Exceptions:
    File is a variable:
        instantiation_error
    File is neither a variable nor an atom:
        type_error(atom,File)
    File is an atom but not an existing file:
        existence_error(file,File)
    File is an atom but cannot be opened for writing:
        permission_error(open,source_sink,File)

---

guess_arity/2

Guesses the arity of records in a given file, asking the user to confirm.

Compilation flags:
    static

Template:
    guess_arity(File,Arity)
Mode and number of proofs:
    guess_arity(+atom,-number) - one

Exceptions:
    File is a variable:
        instantiation_error
    File is neither a variable nor an atom:
        type_error(atom,File)
    File is an atom but not an existing file:

existence_error(file,File)

File is an atom but cannot be opened for writing:

permission_error(open,source_sink,File)

Public predicates

today/3

Returns current date.

Compilation flags:
      static

Template:
      today(Year,Month,Day)
Mode and number of proofs:
      today(-integer,-integer,-integer) - one

leap_year/1

True if the argument is a leap year.

Compilation flags:
    static

Template:
    leap_year(Year)
Mode and number of proofs:
    leap_year(+integer) - zero_or_one

---

name_of_day/3

Name and short name of day.

Compilation flags:
    static

Template:
    name_of_day(Index,Name,Short)
Mode and number of proofs:
    name_of_day(?integer,?atom,?atom) - zero_or_more

---

name_of_month/3

Name and short name of month.

Compilation flags:
    static

Template:
    name_of_month(Index,Name,Short)
Mode and number of proofs:
    name_of_month(?integer,?atom,?atom) - zero_or_more

---

days_in_month/3

Number of days in a month.

Compilation flags:
    static

Template:
    days_in_month(Month,Year,Days)
Mode and number of proofs:
    days_in_month(?integer,+integer,?integer) - zero_or_more

---

valid/3

True if the arguments represent a valid date.

Compilation flags:
    static

Template:
    valid(Year,Month,Day)
Mode and number of proofs:
    valid(@integer,@integer,@integer) - zero_or_one

1.11 dead_code_scanner

object

1.11.1 dead_code_scanner

A tool for detecting likely dead code in compiled Logtalk entities and Prolog modules compiled as objects.

Availability:
    logtalk_load(dead_code_scanner(loader))

Author: Barry Evans and Paulo Moura
Version: 0:15:2
Date: 2024-10-21

Compilation flags:
    static, context_switching_calls

Imports:
    public options
Uses:
    list
    logtalk
    os
    type

Remarks:

- Dead code: A predicate or non-terminal that is not called (directly or indirectly) by any scoped predicate or non-terminal. These predicates and non-terminals are not used, cannot be called without breaking encapsulation, and are thus considered dead code.

- Known issues: Use of local meta-calls with goal arguments only know at runtime can result in false positives. Calls from non-standard meta-predicates may be missed if the meta-calls are not optimized.

- Requirements: Source files must be compiled with the source_data flag turned on. To avoid false positives do to meta-calls, compilation of source files with the optimized flag turned on is also advised.

Inherited public predicates:
    check_option/1 check_options/1 default_option/1 default_options/1 option/2 option/3
    valid_option/1 valid_options/1

- Public predicates
    - entity/1
    - file/2
    - file/1

Public predicates

entity/1

Scans a loaded entity for dead code. Fails if the entity does not exist.

Compilation flags:
    static

Template:
    entity(Entity)
Mode and number of proofs:
    entity(+entity_identifier) - zero_or_one

file/2

Scans all entities in a loaded source file for dead code using the given options. The file can be given by name, basename, full path, or using library notation. Fails if the file is not loaded.

Compilation flags:
    static

Template:
    file(File,Options)
Mode and number of proofs:
    file(+atom,+list(compound)) - zero_or_one

file/1

Scans all entities in a loaded source file for dead code using default options. The file can be given by name, basename, full path, or using library notation. Fails if the file is not loaded.

Compilation flags:
    static

Template:
    file(File)
Mode and number of proofs:
    file(+atom) - zero_or_one

directory/2

Scans all entities in all loaded files from a given directory for dead code using the given options.

Compilation flags:
    static

Template:
    directory(Directory,Options)
Mode and number of proofs:
    directory(+atom,+list(compound)) - one

directory/1

Scans all entities in all loaded files from a given directory for dead code using default options.

Compilation flags:
    static

Template:
    directory(Directory)
Mode and number of proofs:
    directory(+atom) - one

rdirectory/2

Scans all entities in all loaded files from a given directory and its sub-directories for dead code using the given options.

Compilation flags:
    static

Template:
    rdirectory(Directory,Options)
Mode and number of proofs:
    rdirectory(+atom,+list(compound)) - one

rdirectory/1

Scans all entities in all loaded files from a given directory and its sub-directories for dead code using default options.

Compilation flags:
    static

Template:

rdirectory(Directory)
Mode and number of proofs:
    rdirectory(+atom) - one

---

library/2

Scans all entities in all loaded files from a given library for dead code using the given options.

Compilation flags:
    static

Template:
    library(Library,Options)
Mode and number of proofs:
    library(+atom,+list(compound)) - one

---

library/1

Scans all entities in all loaded files from a given library for dead code using default options.

Compilation flags:
    static

Template:
    library(Library)
Mode and number of proofs:
    library(+atom) - one

---

rlibrary/2

Scans all entities in all loaded files in a loaded library and its sub-libraries for dead code using the given options.

Compilation flags:
    static

Template:
    rlibrary(Library,Options)
Mode and number of proofs:
    rlibrary(+atom,+list(compound)) - one

rlibrary/1

Scans all entities in all loaded files in a loaded library and its sub-libraries for dead code using default options.

Compilation flags:
    static

Template:
    rlibrary(Library)
Mode and number of proofs:
    rlibrary(+atom) - one

all/1

Scans all entities for dead code using the given options.

Compilation flags:
    static

Template:
    all(Options)
Mode and number of proofs:
    all(+list(compound)) - one

all/0

Scans all entities for dead code using default options.

Compilation flags:
    static

Mode and number of proofs:
    all - one

predicates/2

Returns an ordered set of local predicates (and non-terminals) that are not used, directly or indirectly, by scoped predicates for a loaded entity.

Compilation flags:
    static

Template:
    predicates(Entity,Predicates)
Mode and number of proofs:
    predicates(+entity_identifier,-list(predicate_indicator)) - one

predicate/2

Enumerates, by backtracking, local predicates (and non-terminals) that are not used, directly or indirectly, by scoped predicates for a loaded entity.

Compilation flags:
    static

Template:
    predicate(Entity,Predicate)
Mode and number of proofs:

predicate(+entity_identifier,?predicate_indicator) - zero_or_more

---

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

(no local declarations; see entity ancestors if any)

(none)

1.12 debug_messages

object

1.12.1 debug_messages

Supports selective enabling and disabling of debug and debug(Group) messages.

Availability:
    logtalk_load(debug_messages(loader))

Author: Paulo Moura
Version: 1:0:1
Date: 2022-05-05

Compilation flags:
    static, context_switching_calls

Provides:
    logtalk::message_hook/4
Uses:
    logtalk

Remarks:

- Limitations: Debug messages are suppressed by the compiler when the optimize flag is turned on and thus cannot be enabled in this case.

Inherited public predicates:
    (none)

- Public predicates
    - enable/1
    - disable/1
    - enabled/1
    - enable/2
    - disable/2

- Protected predicates
- Private predicates
    - enabled_/1
    - enabled_/2
- Operators

Public predicates

enable/1

Enables all debug and debug(Group) messages for the given component.

Compilation flags:
    static

Template:
    enable(Component)
Mode and number of proofs:

enable(@term) - one

---

disable/1

Disables all debug and debug(Group) messages for the given component.

Compilation flags:
     static

Template:
     disable(Component)
Mode and number of proofs:
     disable(@term) - one

---

enabled/1

Enumerates by backtracking the components with enabled debug and debug(Group) messages.

Compilation flags:
     static

Template:
     enabled(Component)
Mode and number of proofs:
     enabled(?term) - zero_or_more

---

enable/2

Enables debug(Group) messages for the given component and group.

Compilation flags:
     static

Template:

enable(Component,Group)
Mode and number of proofs:
enable(@term,@term) - one

---

disable/2

Disables debug(Group) messages for the given component and group.

Compilation flags:
static

Template:
disable(Component,Group)
Mode and number of proofs:
disable(@term,@term) - one

---

enabled/2

Enumerates by backtracking the enabled debug(Group) messages for each component.

Compilation flags:
static

Template:
enabled(Component,Group)
Mode and number of proofs:
enabled(?term,?term) - zero_or_more

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

enabled__/1

Table of components with currently enabled debug and debug(Group) messages.

Compilation flags:
    dynamic

Template:
    enabled__(Component)
Mode and number of proofs:
    enabled__(?term) - zero_or_more

---

enabled__/2

Table of currently enabled debug(Group) per component.

Compilation flags:
    dynamic

Template:
    enabled__(Component,Group)
Mode and number of proofs:
    enabled__(?term,?term) - zero_or_more

Operators

(none)

1.13 debugger

object

1.13.1 debugger

Command-line debugger based on an extended procedure box model supporting execution tracing and spy points.

Availability:
     logtalk_load(debugger(loader))

Author: Paulo Moura
Version: 7:9:1
Date: 2024-11-03

Compilation flags:
     static, context_switching_calls

Implements:
     public debuggerp
Provides:
     logtalk::debug_handler/1
     logtalk::debug_handler/3
Uses:
     logtalk

Remarks:
     (none)

Mode and number of proofs:

debugging__ - zero_or_one

---

tracing__/0

True iff tracing is on.

Compilation flags:
    dynamic

Mode and number of proofs:
    tracing__ - zero_or_one

---

skipping__/0

True iff skipping.

Compilation flags:
    dynamic

Mode and number of proofs:
    skipping__ - zero_or_one

---

skipping_unleashed__/1

True iff skipping (a goal with invocation number N) but showing intermediate ports as unleashed.

Compilation flags:
    dynamic

Template:
    skipping_unleashed__(N)
Mode and number of proofs:
    skipping_unleashed__(?integer) - zero_or_one

---

quasi_skipping__/0

True iff quasi-skipping.

Compilation flags:
    dynamic

Mode and number of proofs:
    quasi_skipping__ - zero_or_one

leaping__/1

True iff leaping in tracing or debugging mode.

Compilation flags:
    dynamic

Template:
    leaping__(Mode)
Mode and number of proofs:
    leaping__(?atom) - zero_or_one

breakpoint__/2

Table of unconditional breakpoints.

Compilation flags:
    dynamic

Template:
    breakpoint__(Entity,Line)
Mode and number of proofs:
    breakpoint__(?object_identifier,?integer) - zero_or_more
    breakpoint__(?category_identifier,?integer) - zero_or_more

spying_predicate__/3

Table of predicate spy points.

Compilation flags:
      dynamic

Template:
      spying_predicate__(Functor,Arity,Original)
Mode and number of proofs:
      spying_predicate__(?atom,?integer,?predicate_indicator) - zero_or_more
      spying_predicate__(?atom,?integer,?non_terminal_indicator) - zero_or_more

spying_context__/4

Table of context spy points.

Compilation flags:
      dynamic

Template:
      spying_context__(Sender,This,Self,Goal)
Mode and number of proofs:
      spying_context__(?object_identifier,?object_identifier,?object_identifier,?callable) - zero_or_more

leashing__/1

Table of currently leashed ports.

Compilation flags:
      dynamic

Template:
      leashing__(Port)

Mode and number of proofs:
    leashing_(?atom) - zero_or_more

---

invocation_number_/1

Current call stack invocation number.

Compilation flags:
    dynamic

Template:
    invocation_number_(N)
Mode and number of proofs:
    invocation_number_(?integer) - zero_or_one

---

jump_to_invocation_number_/1

Invocation number to jump to.

Compilation flags:
    dynamic

Template:
    jump_to_invocation_number_(N)
Mode and number of proofs:
    jump_to_invocation_number_(?integer) - zero_or_one

---

zap_to_port_/1

Port to zap to.

Compilation flags:
    dynamic

Template:
    zap_to_port_(Port)
Mode and number of proofs:
    zap_to_port_(?integer) - zero_or_one

---

write_max_depth_/1

Current term maximum depth.

Compilation flags:
    dynamic

Template:
    write_max_depth_(MaxDepth)
Mode and number of proofs:
    write_max_depth_(?integer) - zero_or_one

---

log_point_/3

Table of log points.

Compilation flags:
    dynamic

Template:
    log_point_(Entity,Line,Message)
Mode and number of proofs:
    log_point_(?object_identifier,?integer,?atom) - zero_or_more
    log_point_(?category_identifier,?integer,?atom) - zero_or_more

---

conditional_breakpoint__/3

Table of conditional breakpoints.

Compilation flags:
    dynamic

Template:
    conditional_breakpoint__(Entity,Line,Condition)
Mode and number of proofs:
    conditional_breakpoint__(?object_identifier,?integer,?callable) - zero_or_more
    conditional_breakpoint__(?category_identifier,?integer,?callable) - zero_or_more

---

triggered_breakpoint__/4

Table of defined triggered breakpoints.

Compilation flags:
    dynamic

Template:
    triggered_breakpoint__(Entity,Line,TriggerEntity,TriggerLine)
Mode and number of proofs:
    triggered_breakpoint__(?object_identifier,?integer,?object_identifier,?integer) - zero_or_more
    triggered_breakpoint__(?object_identifier,?integer,?category_identifier,?integer) - zero_or_more
    triggered_breakpoint__(?category_identifier,?integer,?object_identifier,?integer) - zero_or_more
    triggered_breakpoint__(?category_identifier,?integer,?category_identifier,?integer) - zero_or_more

---

triggered_breakpoint_enabled__/2

Table of enabled triggered breakpoints.

Compilation flags:
    dynamic

Template:
    triggered_breakpoint_enabled__(Entity,Line)

Mode and number of proofs:
    triggered_breakpoint_enabled_(?object_identifier,?integer) - zero_or_more
    triggered_breakpoint_enabled_(?category_identifier,?integer) - zero_or_more

---

file_line_hit_count_/3

Table of file and line hit counts (successful unifications with clause heads).

Compilation flags:
    dynamic

Template:
    file_line_hit_count_(File,Line,Count)
Mode and number of proofs:
    file_line_hit_count_(?atom,?integer,?integer) - zero_or_one

---

protocol

1.13.3 debuggerp

Debugger protocol.

Availability:
    logtalk_load(debugger(loader))

Author: Paulo Moura

Version: 3:3:1
Date: 2024-11-02

Compilation flags:
    static

Dependencies:
    (none)

Remarks:

- Debugger help: Type the character h (condensed help) or the character ? (extended help) at a leashed port.

- Predicate breakpoint: Specified as a ground term Functor/Arity.

- Non-terminal breakpoint: Specified as a ground term Functor//Arity.

- Clause breakpoint: Specified as an Entity-Line term with both Entity and Line bound. Line must be the first source file line of an entity clause.

- Conditional breakpoint: Specified as an Entity-Line term with both Entity and Line bound and a condition. Line must be the first source file line of an entity clause.

- Hit count breakpoint: Specified as an Entity-Line term with both Entity and Line bound and an unification count expression as a condition. Line must be the first source file line of an entity clause.

- Triggered breakpoint: Specified as an Entity-Line term with both Entity and Line bound and another breakpoint as a condition. Line must be the first source file line of an entity clause.

- Context breakpoint: Specified as a (Sender, This, Self, Goal) tuple.

- Log point: Specified as an (Entity, Line, Message) tuple.

- Leash port shorthands: none - [], loose - [fact,rule,call], half - [fact,rule,call,redo], tight - [fact,rule,call, redo,fail,exception], and full - [fact,rule,call,exit,redo,fail,exception].

Public predicates

reset/0

Resets all debugging settings (including breakpoints, log points, and leashed ports) and turns off debugging.

Compilation flags:
  static

Mode and number of proofs:
  reset - one

See also:
  nospyall/0

debug/0

Starts debugging for all defined breakpoints.

Compilation flags:
    static

Mode and number of proofs:
    debug - one

---

nodebug/0

Stops debugging for all defined breakpoints. Also turns off tracing. Does not remove defined breakpoints.

Compilation flags:
    static

Mode and number of proofs:
    nodebug - one

See also:
    reset/0

---

debugging/0

Reports current debugging settings, including breakpoints and log points.

Compilation flags:
    static

Mode and number of proofs:
    debugging - one

---

debugging/1

Enumerates, by backtracking, all entities compiled in debug mode.

Compilation flags:
    static

Template:
    debugging(Entity)
Mode and number of proofs:
    debugging(?entity_identifier) - zero_or_more

---

trace/0

Starts tracing all calls compiled in debug mode.

Compilation flags:
    static

Mode and number of proofs:
    trace - one

---

notrace/0

Stops tracing of calls compiled in debug mode. Debugger will still stop at defined breakpoints.

Compilation flags:
    static

Mode and number of proofs:
    notrace - one

---

leash/1

Sets the debugger leash ports using an abbreviation (none, loose, half, tight, or full) or a list of ports (valid ports are fact, rule, call, exit, redo, fail, and exception).

Compilation flags:
    static

Template:
    leash(Ports)
Mode and number of proofs:
    leash(+atom) - one
    leash(+list(atom)) - one

---

leashing/1

Enumerates, by backtracking, all leashed ports (valid ports are fact, rule, call, exit, redo, fail, and exception).

Compilation flags:
    static

Template:
    leashing(Port)
Mode and number of proofs:
    leashing(?atom) - zero_or_more

---

spy/1

Sets a predicate or clause breakpoint (removing any existing log point or breakpoint defined for the same location, or a list of breakpoints. Fails if a breakpoint is invalid.

Compilation flags:
    static

Template:
    spy(Breakpoint)
Mode and number of proofs:

spy(@spy_point) - zero_or_one
spy(@list(spy_point)) - zero_or_one

---

spying/1

Enumerates, by backtracking, all defined predicate and clause breakpoints.

Compilation flags:
    static

Template:
    spying(Breakpoint)
Mode and number of proofs:
    spying(?spy_point) - zero_or_more

---

nospy/1

Removes all matching predicate and clause breakpoints.

Compilation flags:
    static

Template:
    nospy(Breakpoint)
Mode and number of proofs:
    nospy(@var) - one
    nospy(@spy_point) - one
    nospy(@list(spy_point)) - one

---

spy/3

Sets a conditional or triggered breakpoint (removing any existing log point or breakpoint defined for the same location). The condition can be a unification count expression, a lambda expression, or another breakpoint. Fails if the breakpoint is invalid.

Compilation flags:
    static

Template:
    spy(Entity,Line,Condition)
Mode and number of proofs:
    spy(+atom,+integer,@callable) - zero_or_one

Remarks:

- Unification count expression conditions: >(Count), >=(Count), =:=(Count), =<(Count), <(Count), mod(M), and Count.
- Lambda expression conditions: [Count,N,Goal]>>Condition and [Goal]>>Condition where Count is the unification count, N is the invocation number, and Goal is the goal that unified with the clause head; Condition is called in the context of user.
- Triggered breakpoint conditions: Entity-Line.

spying/3

Enumerates, by backtracking, all conditional and triggered breakpoints.

Compilation flags:
    static

Template:
    spying(Entity,Line,Condition)
Mode and number of proofs:
    spying(?atom,?integer,?callable) - zero_or_more

nospy/3

Removes all matching conditional and triggered breakpoints.

Compilation flags:
    static

Template:
    nospy(Entity,Line,Condition)
Mode and number of proofs:
    nospy(@term,@term,@term) - one

---

spy/4

Sets a context breakpoint.

Compilation flags:
    static

Template:
    spy(Sender,This,Self,Goal)
Mode and number of proofs:
    spy(@term,@term,@term,@term) - one

---

spying/4

Enumerates, by backtracking, all defined context breakpoints.

Compilation flags:
    static

Template:
    spying(Sender,This,Self,Goal)
Mode and number of proofs:
    spying(?term,?term,?term,?term) - zero_or_more

---

nospy/4

Removes all matching context breakpoints.

Compilation flags:
    static

Template:
    nospy(Sender,This,Self,Goal)
Mode and number of proofs:
    nospy(@term,@term,@term,@term) - one

---

nospyall/0

Removes all breakpoints and log points.

Compilation flags:
    static

Mode and number of proofs:
    nospyall - one

See also:
    reset/0

---

log/3

Sets a log point (removing any existing breakpoint defined for the same location). Fails if the log point is invalid.

Compilation flags:
    static

Template:
    log(Entity,Line,Message)
Mode and number of proofs:

    log(@object_identifier,+integer,+atom) - zero_or_one
    log(@category_identifier,+integer,+atom) - zero_or_one

---

logging/3

Enumerates, by backtracking, all defined log points.

Compilation flags:
    static

Template:
    logging(Entity,Line,Message)

Mode and number of proofs:
    logging(?object_identifier,?integer,?atom) - zero_or_more
    logging(?category_identifier,?integer,?atom) - zero_or_more

---

nolog/3

Removes all matching log points.

Compilation flags:
    static

Template:
    nolog(Entity,Line,Message)

Mode and number of proofs:
    nolog(@var_or(object_identifier),@var_or(integer),@var_or(atom)) - one
    nolog(@var_or(category_identifier),@var_or(integer),@var_or(atom)) - one

---

nologall/0

Removes all log points.

Compilation flags:
    static

Mode and number of proofs:
    nologall - one

See also:
    reset/0

Public predicates

start_redirect_to_file/2

Starts redirecting debugger trace messages to a file.

Compilation flags:
    static

Template:
    start_redirect_to_file(File,Goal)
Meta-predicate template:
    start_redirect_to_file(*,0)
Mode and number of proofs:
    start_redirect_to_file(+atom,+callable) - zero_or_more

stop_redirect_to_file/0

Stops redirecting debugger trace messages to a file.

Compilation flags:
    static

Mode and number of proofs:
    stop_redirect_to_file - one

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

(no local declarations; see entity ancestors if any)

Public predicates

changed/0

Receiver changed in some way. Notify all dependents.

Compilation flags:
    static

Mode and number of proofs:
    changed - one

---

changed/1

Receiver changed as specified in the argument. Notify all dependents.

Compilation flags:
    static

Template:
    changed(Change)
Mode and number of proofs:
    changed(?nonvar) - one

---

dependents/1

Returns a list of all dependent objects.

Compilation flags:
    static

Template:
    dependents(Dependents)
Mode and number of proofs:
    dependents(-list) - one

---

addDependent/1

Adds a new dependent object.

Compilation flags:
    static

Template:
    addDependent(Dependent)
Mode and number of proofs:
    addDependent(@object) - one

---

removeDependent/1

Removes a dependent object.

Compilation flags:
    static

Template:
    removeDependent(Dependent)
Mode and number of proofs:
    removeDependent(?object) - zero_or_more

Protected predicates

(none)

Public predicates

libraries/3

Creates a diagram for a set of libraries using the specified options. The Project argument is used as a prefix for the diagram file name.

Compilation flags:
    static

Template:
    libraries(Project,Libraries,Options)
Mode and number of proofs:
    libraries(+atom,+list(atom),+list(compound)) - one

libraries/2

Creates a diagram for a set of libraries using the default options. The Project argument is used as a prefix for the diagram file name.

Compilation flags:
    static

Template:
    libraries(Project,Libraries)
Mode and number of proofs:
    libraries(+atom,+list(atom)) - one

libraries/1

Creates a diagram for a set of libraries using the default options. The prefix libraries is used for the diagram file name.

Compilation flags:
    static

Template:

libraries(Libraries)

Mode and number of proofs:

libraries(+list(atom)) - one

---

all_libraries/1

Creates a diagram for all loaded libraries using the specified options.

Compilation flags:

static

Template:

all_libraries(Options)

Mode and number of proofs:

all_libraries(+list(compound)) - one

---

all_libraries/0

Creates a diagram for all loaded libraries using default options.

Compilation flags:

static

Mode and number of proofs:

all_libraries - one

---

rlibrary/2

Creates a diagram for a library and its sub-libraries using the specified options.

Compilation flags:

static

Template:

rlibrary(Library,Options)
Mode and number of proofs:
    rlibrary(+atom,+list(compound)) - one

---

rlibrary/1

Creates a diagram for a library and its sub-libraries using default options.

Compilation flags:
    static

Template:
    rlibrary(Library)
Mode and number of proofs:
    rlibrary(+atom) - one

---

library/2

Creates a diagram for a library using the specified options.

Compilation flags:
    static

Template:
    library(Library,Options)
Mode and number of proofs:
    library(+atom,+list(compound)) - one

---

library/1

Creates a diagram for a library using default options.

Compilation flags:
     static

Template:
     library(Library)
Mode and number of proofs:
     library(+atom) - one

---

directories/3

Creates a diagram for a set of directories using the specified options. The Project argument is used as a prefix for the diagram file name.

Compilation flags:
     static

Template:
     directories(Project,Directories,Options)
Mode and number of proofs:
     directories(+atom,+list(atom),+list(compound)) - one

---

directories/2

Creates a diagram for a set of directories using the default options. The Project argument is used as a prefix for the diagram file name.

Compilation flags:
     static

Template:
     directories(Project,Directories)
Mode and number of proofs:
     directories(+atom,+list(atom)) - one

rdirectory/3

Creates a diagram for a directory and its sub-directories using the specified options. The Project argument is used as a prefix for the diagram file name.

Compilation flags:
    static

Template:
    rdirectory(Project,Directory,Options)
Mode and number of proofs:
    rdirectory(+atom,+atom,+list(compound)) - one

rdirectory/2

Creates a diagram for a directory and its sub-directories using default options. The Project argument is used as a prefix for the diagram file name.

Compilation flags:
    static

Template:
    rdirectory(Project,Directory)
Mode and number of proofs:
    rdirectory(+atom,+atom) - one

rdirectory/1

Creates a diagram for a directory and its sub-directories using default options. The name of the directory is used as a prefix for the diagram file name.

Compilation flags:
    static

Template:

rdirectory(Directory)

Mode and number of proofs:

rdirectory(+atom) - one

---

directory/3

Creates a diagram for a directory using the specified options. The Project argument is used as a prefix for the diagram file name.

Compilation flags:

static

Template:

directory(Project,Directory,Options)

Mode and number of proofs:

directory(+atom,+atom,+list(compound)) - one

---

directory/2

Creates a diagram for a directory using default options. The Project argument is used as a prefix for the diagram file name.

Compilation flags:

static

Template:

directory(Project,Directory)

Mode and number of proofs:

directory(+atom,+atom) - one

---

directory/1

Creates a diagram for a directory using default options. The name of the directory is used as a prefix for the diagram file name.

Compilation flags:
    static

Template:
    directory(Directory)
Mode and number of proofs:
    directory(+atom) - one

---

files/3

Creates a diagram for a set of files using the specified options. The file can be specified by name, basename, full path, or using library notation. The Project argument is used as a prefix for the diagram file name.

Compilation flags:
    static

Template:
    files(Project,Files,Options)
Mode and number of proofs:
    files(+atom,+list(atom),+list(compound)) - one

---

files/2

Creates a diagram for a set of files using the default options. The file can be specified by name, basename, full path, or using library notation. The Project argument is used as a prefix for the diagram file name.

Compilation flags:
    static

Template:
    files(Project,Files)
Mode and number of proofs:

files(+atom,+list(atom)) - one

---

files/1

Creates a diagram for a set of files using the default options. The file can be specified by name, basename, full path, or using library notation. The prefix files is used for the diagram file name.

Compilation flags:
    static

Template:
    files(Files)
Mode and number of proofs:
    files(+list(atom)) - one

---

all_files/1

Creates a diagram for all loaded files using the specified options.

Compilation flags:
    static

Template:
    all_files(Options)
Mode and number of proofs:
    all_files(+list(compound)) - one

---

all_files/0

Creates a diagram for all loaded files using default options.

Compilation flags:
    static

Mode and number of proofs:
     all_files - one

format_object/1

Returns the identifier of the object implementing the graph language currently being used. Fails if none is specified.

Compilation flags:
     static

Template:
     format_object(Object)
Mode and number of proofs:
     format_object(-object_identifier) - zero_or_one

diagram_description/1

Returns the diagram description.

Compilation flags:
     static

Template:
     diagram_description(Description)
Mode and number of proofs:
     diagram_description(-atom) - one

diagram__name__suffix/1

Returns the diagram name suffix.

Compilation flags:
    static

Template:
    diagram__name__suffix(Suffix)
Mode and number of proofs:
    diagram__name__suffix(-atom) - one

Protected predicates

diagram__caption/3

Creates a diagram caption from the diagram description and the subject and its kind.

Compilation flags:
    static

Template:
    diagram__caption(Kind,Subject,Description)
Mode and number of proofs:
    diagram__caption(+atom,+callable,-atom) - one

---

output__rlibrary/3

Generates diagram output for a library and its sub-libraries using the specified options.

Compilation flags:
    static

Template:
    output__rlibrary(Library,Path,Options)
Mode and number of proofs:
    output__rlibrary(+atom,+atom,+list(compound)) - one

---

output_library/3

Generates diagram output for a library using the specified options.

Compilation flags:
    static

Template:
    output_library(Library,Path,Options)
Mode and number of proofs:
    output_library(+atom,+atom,+list(compound)) - one

output_rdirectory/3

Generates diagram output for a directory and its sub-directories using the specified options.

Compilation flags:
    static

Template:
    output_rdirectory(Project,Path,Options)
Mode and number of proofs:
    output_rdirectory(+atom,+atom,+list(compound)) - one

output_externals/1

Output external nodes using the specified options depending on the value of the boolean option externals/1.

Compilation flags:
    static

Template:
    output_externals(Options)
Mode and number of proofs:

output_externals(+list(compound)) - one

---

output_files/2

Generates diagram output for a list of files using the specified options.

Compilation flags:
    static

Template:
    output_files(Files,Options)
Mode and number of proofs:
    output_files(+list,+list(compound)) - one

---

output_file/4

Generates diagram output for a file using the specified options.

Compilation flags:
    static

Template:
    output_file(Path,Basename,Directory,Options)
Mode and number of proofs:
    output_file(+atom,+atom,+atom,+list(compound)) - one

---

output_sub_diagrams/1

Outputs sub-diagrams using the specified options.

Compilation flags:
    static

Template:

output_sub_diagrams(Options)

Mode and number of proofs:
output_sub_diagrams(+list(compound)) - one

---

reset/0

Resets all temporary information used when generating a diagram.

Compilation flags:
static

Mode and number of proofs:
reset - one

---

output_node/6

Outputs a graph node.

Compilation flags:
static

Template:
output_node(Identifier,Label,Caption,Contents,Kind,Options)
Mode and number of proofs:
output_node(+nonvar,+nonvar,+nonvar,+list(nonvar),+atom,+list(compound)) - one

---

node/6

Enumerates, by backtracking, all saved nodes.

Compilation flags:
static

Template:

node(Identifier,Label,Caption,Contents,Kind,Options)

Mode and number of proofs:

node(?nonvar,?nonvar,?nonvar,?list(compound),?atom,?list(compound)) - zero_or_more

---

edge/5

Enumerates, by backtracking, all saved edges.

Compilation flags:

static

Template:

edge(From,To,Labels,Kind,Options)

Mode and number of proofs:

edge(?nonvar,?nonvar,?list(nonvar),?atom,?list(compound)) - zero_or_more

---

output_edges/1

Outputs all edges.

Compilation flags:

static

Template:

output_edges(Options)

Mode and number of proofs:

output_edges(+list(compound)) - one

---

save_edge/5

Saves a graph edge.

Compilation flags:
    static

Template:
    save_edge(From,To,Labels,Kind,Options)
Mode and number of proofs:
    save_edge(+nonvar,+nonvar,+list(nonvar),+atom,+list(compound)) - one

---

output_missing_externals/1

Outputs missing external nodes (usually due to unloaded resources) that are referenced from edges.

Compilation flags:
    static

Template:
    output_missing_externals(Options)
Mode and number of proofs:
    output_missing_externals(+list(compound)) - one

---

not_excluded_file/4

True when the given file is not excluded from the generated output. Excluded files may be specified by full path or by basename and with or without extension. Excluded directories may be listed by full or relative path.

Compilation flags:
    static

Template:
    not_excluded_file(Path,Basename,ExcludedDirectories,ExcludedFiles)
Mode and number of proofs:
    not_excluded_file(+atom,+atom,+list(atom),+list(atom)) - zero_or_one

output_file_path/4

Returns the output file path.

Compilation flags:
    static

Template:
    output_file_path(Name,Options,Format,Path)
Mode and number of proofs:
    output_file_path(+atom,+list(atom),+object_identifier,-atom) - one

locate_library/2

Locates a library given its name.

Compilation flags:
    static

Template:
    locate_library(Library,Path)
Mode and number of proofs:
    locate_library(+atom,-atom) - one

locate_directory/2

Locates a directory given its name or full path.

Compilation flags:
    static

Template:
    locate_directory(Directory,Path)
Mode and number of proofs:

locate_directory(+atom,-atom) - one

---

locate_file/5

Locates a file given its name, basename, full path, or library notation representation.

Compilation flags:
    static

Template:
    locate_file(File,Basename,Extension,Directory,Path)
Mode and number of proofs:
    locate_file(+atom,+atom,+atom,+atom,-atom) - one

---

ground_entity_identifier/3

Converts an entity identifier to a ground term.

Compilation flags:
    static

Template:
    ground_entity_identifier(Kind,Identifier,GroundIdentifier)
Mode and number of proofs:
    ground_entity_identifier(+atom,+callable,-callable) - one

---

filter_file_extension/3

Filters the file name extension depending on the file_extensions/1 option.

Compilation flags:
    static

Template:

filter_file_extension(Basename,Options,Name)

Mode and number of proofs:

filter_file_extension(+atom,+list(compound),-atom) - one

---

filter_external_file_extension/3

Filters the external file name extension depending on the file_extensions/1 option.

Compilation flags:

static

Template:

filter_external_file_extension(Path,Options,Name)

Mode and number of proofs:

filter_external_file_extension(+atom,+list(compound),-atom) - one

---

add_link_options/3

Adds url/1, urls/2, and tooltip/1 link options (for use by the graph language) based on the specified path to the list of options.

Compilation flags:

static

Template:

add_link_options(Path,Options,LinkingOptions)

Mode and number of proofs:

add_link_options(+atom,+list(compound),-list(compound)) - one

---

supported_editor_url_scheme_prefix/1

Table of prefixes for text editors that supports a URL scheme to open diagram links.

Compilation flags:
    static

Template:
    supported_editor_url_scheme_prefix(Prefix)
Mode and number of proofs:
    supported_editor_url_scheme_prefix(?atom) - zero_or_more

---

omit_path_prefix/3

Removes a prefix from a path, returning the relative path, when using the option omit_path_prefixes/1. Used mainly for constructing directory and file node identifiers and captions.

Compilation flags:
    static

Template:
    omit_path_prefix(Path,Options,Relative)
Mode and number of proofs:
    omit_path_prefix(+atom,+list(compound),-atom) - one

---

add_node_zoom_option/4

Adds node zoom options when using the zoom option.

Compilation flags:
    static

Template:
    add_node_zoom_option(Identifier,Suffix,Options,NodeOptions)
Mode and number of proofs:
    add_node_zoom_option(+atom,+atom,+list(compound),-list(compound)) - one

message_diagram_description/1

Diagram description for progress messages.

Compilation flags:
     static

Template:
     message_diagram_description(Description)
Mode and number of proofs:
     message_diagram_description(?atom) - one

Private predicates

node_/6

Table of saved nodes.

Compilation flags:
     dynamic

Template:
     node_(Identifier,Label,Caption,Contents,Kind,Options)
Mode and number of proofs:
     node_(?nonvar,?nonvar,?nonvar,?list(compound),?atom,?list(compound)) - zero_or_more

node_path_/2

Table of node paths.

Compilation flags:
     dynamic

Template:

    node_path_(Node,Path)

Mode and number of proofs:

    node_path_(?ground,?list(ground)) - zero_or_more

---

edge_/5

Table of saved edges.

Compilation flags:

    dynamic

Template:

    edge_(From,To,Labels,Kind,Options)

Mode and number of proofs:

    edge_(?nonvar,?nonvar,?list(nonvar),?atom,?list(compound)) - zero_or_more

---

Operators

(none)

object

1.15.3 diagrams

Predicates for generating all supported diagrams for libraries, directories, and files in one step using the DOT format.

Availability:

    logtalk_load(diagrams(loader))

Author: Paulo Moura

Version: 2:1:0

Date: 2019-04-07

Compilation flags:

    static, context_switching_calls

Extends:

public diagrams(dot)

Remarks:

1.15.4 diagrams(Format)

- Format - Graph language file format.

Predicates for generating all supported diagrams for libraries, directories, or files in one step using the specified format.

Availability:

logtalk_load(diagrams(loader))

Author: Paulo Moura

Version: 2:8:0

Date: 2019-06-13

Compilation flags:

> static, context_switching_calls

Uses:

> list
>
> os

Remarks:

- Common options: title/1, date/1, output_directory/1, relation_labels/1, node_type_captions/1, exclude_files/1, exclude_libraries/1, url_prefixes/1, omit_path_prefix/1, entity_url_suffix_target/2, and layout/1.

- Limitations: Some of the provided predicates only make sense for some types of diagrams. Also, fine tuning may require generating individual diagrams directly instead of as a batch using this utility object.

Inherited public predicates:

Public predicates

libraries/3

Creates all supported diagrams for a set of libraries using the specified options. The Project argument is used as a prefix for the diagram file names.

Compilation flags:
    static

Template:
    libraries(Project,Libraries,Options)
Mode and number of proofs:
    libraries(+atom,+list(atom),+list(compound)) - one

libraries/2

Creates all supported diagrams for a set of libraries using the default options. The Project argument is used as a prefix for the diagram file names.

Compilation flags:
    static

Template:

libraries(Project,Libraries)

Mode and number of proofs:

libraries(+atom,+list(atom)) - one

---

libraries/1

Creates all supported diagrams for a set of libraries using the default options. The prefix libraries is used for the diagram file names.

Compilation flags:

static

Template:

libraries(Libraries)

Mode and number of proofs:

libraries(+list(atom)) - one

---

all_libraries/1

Creates all supported diagrams for all loaded libraries using the specified options.

Compilation flags:

static

Template:

all_libraries(Options)

Mode and number of proofs:

all_libraries(+list(compound)) - one

---

all_libraries/0

Creates all supported diagrams for all loaded libraries using default options.

Compilation flags:
    static

Mode and number of proofs:
    all_libraries - one

---

rlibrary/2

Creates all supported diagrams for a library and its sub-libraries using the specified options.

Compilation flags:
    static

Template:
    rlibrary(Library,Options)
Mode and number of proofs:
    rlibrary(+atom,+list(compound)) - one

---

rlibrary/1

Creates all supported diagrams for a library and its sub-libraries using default options.

Compilation flags:
    static

Template:
    rlibrary(Library)
Mode and number of proofs:
    rlibrary(+atom) - one

---

library/2

Creates all supported diagrams for a library using the specified options.

Compilation flags:
    static

Template:
    library(Library,Options)
Mode and number of proofs:
    library(+atom,+list(compound)) - one

---

library/1

Creates all supported diagrams for a library using default options.

Compilation flags:
    static

Template:
    library(Library)
Mode and number of proofs:
    library(+atom) - one

---

directories/3

Creates all supported diagrams for a set of directories using the specified options. The Project argument is used as a prefix for the diagram file names.

Compilation flags:
    static

Template:
    directories(Project,Directories,Options)
Mode and number of proofs:
    directories(+atom,+list(atom),+list(compound)) - one

---

directories/2

Creates all supported diagrams for a directory using default options. The Project argument is used as a prefix for the diagram file names.

Compilation flags:
    static

Template:
    directories(Project,Directories)
Mode and number of proofs:
    directories(+atom,+list(atom)) - one

rdirectory/3

Creates all supported diagrams for a directory and its sub-directories using the specified options. The Project argument is used as a prefix for the diagram file name.

Compilation flags:
    static

Template:
    rdirectory(Project,Directory,Options)
Mode and number of proofs:
    rdirectory(+atom,+atom,+list(compound)) - one

rdirectory/2

Creates all supported diagrams for a directory and its sub-directories using default options. The Project argument is used as a prefix for the diagram file name.

Compilation flags:
    static

Template:

   rdirectory(Project,Directory)
Mode and number of proofs:
   rdirectory(+atom,+atom) - one

---

rdirectory/1

Creates all supported diagrams for a directory and its sub-directories using default options. The name of the directory is used as a prefix for the diagram file name.

Compilation flags:
   static

Template:
   rdirectory(Directory)
Mode and number of proofs:
   rdirectory(+atom) - one

---

directory/3

Creates all supported diagrams for a directory using the specified options. The Project argument is used as a prefix for the diagram file names.

Compilation flags:
   static

Template:
   directory(Project,Directory,Options)
Mode and number of proofs:
   directory(+atom,+atom,+list(compound)) - one

---

directory/2

Creates all supported diagrams for a directory using default options. The Project argument is used as a prefix for the diagram file names.

Compilation flags:
    static

Template:
    directory(Project,Directory)
Mode and number of proofs:
    directory(+atom,+atom) - one

---

directory/1

Creates all supported diagrams for a directory using default options. The name of the directory is used as a prefix for the diagram file names.

Compilation flags:
    static

Template:
    directory(Directory)
Mode and number of proofs:
    directory(+atom) - one

---

files/3

Creates all supported diagrams for a set of files using the specified options. The file can be specified by name, basename, full path, or using library notation. The Project argument is used as a prefix for the diagram file names.

Compilation flags:
    static

Template:
    files(Project,Files,Options)

Mode and number of proofs:
    files(+atom,+list(atom),+list(compound)) - one

files/2

Creates all supported diagrams for a set of files using the default options. The file can be specified by name, basename, full path, or using library notation. The Project argument is used as a prefix for the diagram file names.

Compilation flags:
    static

Template:
    files(Project,Files)
Mode and number of proofs:
    files(+atom,+list(atom)) - one

files/1

Creates all supported diagrams for a set of files using the default options. The file can be specified by name, basename, full path, or using library notation. The prefix "files" is used for the diagram file names.

Compilation flags:
    static

Template:
    files(Files)
Mode and number of proofs:
    files(+list(atom)) - one

all_files/1

Creates all supported diagrams for all loaded files using the specified options.

Compilation flags:
    static

Template:
    all_files(Options)
Mode and number of proofs:
    all_files(+list(compound)) - one

---

all_files/0

Creates all supported diagrams for all loaded files using default options.

Compilation flags:
    static

Mode and number of proofs:
    all_files - one

Public predicates

file/2

Creates a diagram for all entities in a loaded source file using the specified options. The file can be specified by name, basename, full path, or using library notation.

Compilation flags:
    static

Template:
    file(File,Options)
Mode and number of proofs:
    file(+atom,+list(compound)) - one

file/1

Creates a diagram for all entities in a loaded source file using default options. The file can be specified by name, basename, full path, or using library notation.

Compilation flags:
    static

Template:
    file(File)
Mode and number of proofs:
    file(+atom) - one

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

included_entity__/1

Table of Logtalk entities already included in the diagram.

Compilation flags:
    dynamic

Template:
    included_entity_(Entity)
Mode and number of proofs:
    included_entity_(?entity_identifier) - zero_or_more

included_module__/1

Table of Prolog modules already included in the diagram.

Compilation flags:
    dynamic

Template:
    included_module_(Module)
Mode and number of proofs:
    included_module_(?module_identifier) - zero_or_more

referenced_entity__/2

Table of referenced Logtalk entities in the diagram.

Compilation flags:
    dynamic

Template:

referenced_entity_(Referencer,Entity)

Mode and number of proofs:

referenced_entity_(?entity_identifier,?entity_identifier) - zero_or_more

---

referenced_module_/2

Table of referenced Logtalk entities in the diagram.

Compilation flags:

dynamic

Template:

referenced_module_(Referencer,Entity)

Mode and number of proofs:

referenced_module_(?entity_identifier,?module_identifier) - zero_or_more

---

Public predicates

(no local declarations; see entity ancestors if any)

Protected predicates

remember_included_file/1

Remember included Logtalk file in the diagram.

Compilation flags:
    static

Template:
    remember_included_file(Path)
Mode and number of proofs:
    remember_included_file(+atom) - one

remember_referenced_logtalk_file/1

Remember referenced Logtalk file in the diagram.

Compilation flags:
    static

Template:

remember_referenced_logtalk_file(Path)

Mode and number of proofs:

remember_referenced_logtalk_file(+atom) - one

---

remember_referenced_prolog_file/1

Remember referenced Prolog file in the diagram.

Compilation flags:

static

Template:

remember_referenced_prolog_file(Path)

Mode and number of proofs:

remember_referenced_prolog_file(+atom) - one

Private predicates

included_file_/1

Table of Logtalk files already included in the diagram.

Compilation flags:

dynamic

Template:

included_file_(Path)

Mode and number of proofs:

included_file_(?atom) - zero_or_more

---

referenced_logtalk_file_/1

Table of referenced Logtalk files in the diagram.

Compilation flags:

Public predicates

output_file_name/2

Constructs the diagram file basename by adding a graph language dependent extension to the given name.

Compilation flags:
    static

Template:
    output_file_name(Name,Basename)
Mode and number of proofs:
    output_file_name(+atom,-atom) - one

file_header/3

Writes the output file header using the specified options.

Compilation flags:
    static

Template:
    file_header(Stream,Identifier,Options)
Mode and number of proofs:
    file_header(+stream_or_alias,+atom,+list(compound)) - one

file_footer/3

Writes the output file footer using the specified options.

Compilation flags:
    static

Template:
    file_footer(Stream,Identifier,Options)
Mode and number of proofs:
    file_footer(+stream_or_alias,+atom,+list(compound)) - one

---

graph_header/5

Writes a graph header using the specified options.

Compilation flags:
    static

Template:
    graph_header(Stream,Identifier,Label,Kind,Options)
Mode and number of proofs:
    graph_header(+stream_or_alias,+atom,+atom,+atom,+list(compound)) - one

---

graph_footer/5

Writes a graph footer using the specified options.

Compilation flags:
    static

Template:
    graph_footer(Stream,Identifier,Label,Kind,Options)
Mode and number of proofs:
    graph_footer(+stream_or_alias,+atom,+atom,+atom,+list(compound)) - one

---

node/7

Writes a node using the specified options.

Compilation flags:
    static

Template:
    node(Stream,Identifier,Label,Caption,Lines,Kind,Options)
Mode and number of proofs:
    node(+stream_or_alias,+nonvar,+nonvar,+nonvar,+list(nonvar),+atom,+list(compound)) - one

---

edge/6

Writes an edge between two nodes using the specified options.

Compilation flags:
    static

Template:
    edge(Stream,Start,End,Labels,Kind,Options)
Mode and number of proofs:
    edge(+stream_or_alias,+nonvar,+nonvar,+list(nonvar),+atom,+list(compound)) - one

---

Public predicates

(no local declarations; see entity ancestors if any)

Protected predicates

add_library_documentation_url/4

Adds a documentation URL when using the option url_prefixes/2.

Compilation flags:
    static

Template:
    add_library_documentation_url(Kind,Options,Library,NodeOptions)
Mode and number of proofs:
    add_library_documentation_url(+atom,+list(compound),+atom,-list(compound)) - one

remember_included_library/2

Remember included Logtalk library in the diagram.

Compilation flags:
    static

Template:
    remember_included_library(Library,Path)
Mode and number of proofs:
    remember_included_library(+atom,+atom) - one

remember_referenced_logtalk_library/2

Remember referenced Logtalk library in the diagram.

Compilation flags:
    static

Template:
 remember_referenced_logtalk_library(Library,Path)
Mode and number of proofs:
 remember_referenced_logtalk_library(+atom,+atom) - one

---

remember_referenced_prolog_library/2

Remember referenced Prolog library in the diagram.

Compilation flags:
 static

Template:
 remember_referenced_prolog_library(Library,Path)
Mode and number of proofs:
 remember_referenced_prolog_library(+atom,+atom) - one

Private predicates

included_library_/2

Table of Logtalk libraries already included in the diagram.

Compilation flags:
 dynamic

Template:
 included_library_(Library,Path)
Mode and number of proofs:
 included_library_(?atom,?atom) - zero_or_more

---

referenced_logtalk_library_/2

Table of referenced Logtalk libraries in the diagram.

Compilation flags:
  dynamic

Template:
  referenced_logtalk_library_(Library,Path)
Mode and number of proofs:
  referenced_logtalk_library_(?atom,?atom) - zero_or_more

referenced_prolog_library_/2

Table of referenced Prolog libraries in the diagram.

Compilation flags:
  dynamic

Template:
  referenced_prolog_library_(Library,Path)
Mode and number of proofs:
  referenced_prolog_library_(?atom,?atom) - zero_or_more

Public predicates

module_property/2

Access to module properties, at least exports/1, file/1, and file/2 but also declares/2, defines/2, calls/2, and provides/3 when possible.

Compilation flags:
    static

Template:
    module_property(Module,Property)
Mode and number of proofs:
    module_property(?atom,?callable) - zero_or_more

---

loaded_file_property/2

Access to loaded source file properties, at least basename/1, directory/1 but also parent/1 when possible.

Compilation flags:
    static

Template:
    loaded_file_property(File,Property)
Mode and number of proofs:
    loaded_file_property(?atom,?callable) - zero_or_more

---

source_file_extension/1

Valid source file extension for Prolog source files.

Compilation flags:
    static

Template:
    source_file_extension(Extension)
Mode and number of proofs:
    source_file_extension(?atom) - one_or_more

Protected predicates

Public predicates

entity/2

Creates a diagram for a single entity using the specified options.

Compilation flags:
   static

Template:
   entity(Entity,Options)
Mode and number of proofs:
   entity(+entity_identifier,+list(compound)) - one

---

entity/1

Creates a diagram for a single entity using default options.

Compilation flags:
   static

Template:
   entity(Entity)
Mode and number of proofs:
   entity(+entity_identifier) - one

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

included_predicate_/1

Table of predicates already included in the diagram for the entity under processing.

Compilation flags:
   dynamic

Template:

    included_predicate_(Predicate)

Mode and number of proofs:

    included_predicate_(?predicate_indicator) - zero_or_more

---

referenced_predicate_/1

Table of referenced predicates for the entity under processing.

Compilation flags:

    dynamic

Template:

    referenced_predicate_(Predicate)

Mode and number of proofs:

    referenced_predicate_(?predicate_indicator) - zero_or_more

---

external_predicate_/1

Table of external predicate references for all the entities under processing.

Compilation flags:

    dynamic

Template:

    external_predicate_(Reference)

Mode and number of proofs:

    external_predicate_(?compound) - zero_or_more

Operators

(none)

protocol

1.16.3 dictionaryp

Dictionary protocol.

Availability:
> logtalk_load(dictionaries(loader))

Author: Paulo Moura
Version: 2:4:0
Date: 2024-10-02

Compilation flags:
> static

Dependencies:
> (none)

Remarks:
> (none)

Inherited public predicates:
> (none)

- Public predicates
  - as_dictionary/2
  - as_list/2

Public predicates

as_dictionary/2

Converts a list of key-value pairs to a dictionary.

Compilation flags:
    static

Template:
    as_dictionary(Pairs,Dictionary)
Mode and number of proofs:
    as_dictionary(@list(pairs),-dictionary) - one

as_list/2

Converts a dictionary to an ordered list (as per standard order) of key-value pairs.

Compilation flags:
    static

Template:
    as_list(Dictionary,Pairs)
Mode and number of proofs:
    as_list(@dictionary,-list(pairs)) - one

as_curly_bracketed/2

Creates a curly-bracketed term representation of a dictionary.

Compilation flags:
    static

Template:
    as_curly_bracketed(Dictionary,Term)
Mode and number of proofs:
    as_curly_bracketed(+dictionary,--term) - one

clone/3

Clones a dictionary using the same keys but with all values unbound and returning a list of all the pairs in the new clone.

Compilation flags:
    static

Template:
    clone(Dictionary,Clone,ClonePairs)
Mode and number of proofs:
    clone(+dictionary,-dictionary,-list(pairs)) - one

clone/4

Clones a dictionary using the same keys but with all values unbound and returning the list of all pairs in the dictionary and in the clone.

Compilation flags:
    static

Template:
    clone(Dictionary,Pairs,Clone,ClonePairs)
Mode and number of proofs:
    clone(+dictionary,-list(pairs),-dictionary,-list(pairs)) - one

insert/4

Inserts a key-value pair into a dictionary, returning the updated dictionary. When the key already exists, the associated value is updated.

Compilation flags:
    static

Template:

insert(OldDictionary,Key,Value,NewDictionary)

Mode and number of proofs:

insert(+dictionary,+ground,@term,-dictionary) - one

delete/4

Deletes a matching key-value pair from a dictionary, returning the updated dictionary. Fails if it cannot find the key or if the key exists but the value does not unify.

Compilation flags:

static

Template:

delete(OldDictionary,Key,Value,NewDictionary)

Mode and number of proofs:

delete(+dictionary,@ground,?term,-dictionary) - zero_or_one

update/4

Updates the value associated with Key in a dictionary, returning the updated dictionary. Fails if it cannot find the key.

Compilation flags:

static

Template:

update(OldDictionary,Key,NewValue,NewDictionary)

Mode and number of proofs:

update(+dictionary,@ground,+term,-dictionary) - zero_or_one

update/5

Updates the value associated with a key in a dictionary, returning the updated dictionary. Fails if it cannot find the key or if the existing value does not unify.

Compilation flags:
　　static

Template:
　　update(OldDictionary,Key,OldValue,NewValue,NewDictionary)
Mode and number of proofs:
　　update(+dictionary,@ground,?term,+term,-dictionary) - zero_or_one

---

update/3

Updates the key-value pairs in a dictionary, returning the updated dictionary. Fails if it cannot find one of the keys.

Compilation flags:
　　static

Template:
　　update(OldDictionary,Pairs,NewDictionary)
Mode and number of proofs:
　　update(+dictionary,@list(pair),-dictionary) - zero_or_one

---

empty/1

True iff the dictionary is empty.

Compilation flags:
　　static

Template:
　　empty(Dictionary)
Mode and number of proofs:
　　empty(@dictionary) - zero_or_one

---

lookup/3

Lookups a matching key-value pair from a dictionary. Fails if no match is found.

Compilation flags:
    static

Template:
    lookup(Key,Value,Dictionary)
Mode and number of proofs:
    lookup(+ground,?term,@dictionary) - zero_or_one
    lookup(-ground,?term,@dictionary) - zero_or_more

lookup/2

Lookups all matching key-value pairs from a dictionary. Fails if it cannot find one of the keys or if a value for a key does not unify.

Compilation flags:
    static

Template:
    lookup(Pairs,Dictionary)
Mode and number of proofs:
    lookup(+list(pair),@dictionary) - zero_or_one

intersection/2

True iff the values of the dictionaries common keys unify. Trivially true when there are no common keys.

Compilation flags:
    static

Template:

intersection(Dictionary1,Dictionary2)

Mode and number of proofs:

intersection(+dictionary,+dictionary) - zero_or_one

intersection/3

Returns the (possibly empty) intersection between two dictionaries when the values of their common keys unify.

Compilation flags:

static

Template:

intersection(Dictionary1,Dictionary2,Intersection)

Mode and number of proofs:

intersection(+dictionary,+dictionary,-dictionary) - zero_or_one

previous/4

Returns the previous pair in a dictionary given a key. Fails if there is no previous pair.

Compilation flags:

static

Template:

previous(Dictionary,Key,Previous,Value)

Mode and number of proofs:

previous(+dictionary,+key,-key,-value) - zero_or_one

next/4

Returns the next pair in a dictionary given a key. Fails if there is no next pair.

Compilation flags:
    static

Template:
    next(Dictionary,Key,Next,Value)
Mode and number of proofs:
    next(+dictionary,+key,-key,-value) - zero_or_one

---

min/3

Returns the pair with the minimum key (as per standard order) in a dictionary. Fails if the dictionary is empty.

Compilation flags:
    static

Template:
    min(Dictionary,Key,Value)
Mode and number of proofs:
    min(+dictionary,-key,-value) - zero_or_one

---

max/3

Returns the pair with the maximum key (as per standard order) in a dictionary. Fails if the dictionary is empty.

Compilation flags:
    static

Template:
    max(Dictionary,Key,Value)
Mode and number of proofs:
    max(+dictionary,-key,-value) - zero_or_one

delete_min/4

Deletes the pair with the minimum key (as per standard order) from a dictionary, returning the deleted pair and the updated dictionary. Fails if the dictionary is empty.

Compilation flags:
    static

Template:
    delete_min(OldDictionary,Key,Value,NewDictionary)
Mode and number of proofs:
    delete_min(+dictionary,-key,-value,-dictionary) - zero_or_one

delete_max/4

Deletes the pair with the maximum key (as per standard order) from a dictionary, returning the deleted pair and the updated dictionary. Fails if the dictionary is empty.

Compilation flags:
    static

Template:
    delete_max(OldDictionary,Key,Value,NewDictionary)
Mode and number of proofs:
    delete_max(+dictionary,-key,-value,-dictionary) - zero_or_one

keys/2

Returns a list with all the dictionary keys in ascending order (as per standard order).

Compilation flags:
    static

Template:

keys(Dictionary,Keys)
Mode and number of proofs:
    keys(@dictionary,-list) - one

---

values/2

Returns a list with all the dictionary values in ascending order of the keys (as per standard order).

Compilation flags:
    static

Template:
    values(Dictionary,Values)
Mode and number of proofs:
    values(@dictionary,-list) - one

---

map/2

Maps a closure over each dictionary key-value pair. Fails if the mapped closure attempts to modify the keys.

Compilation flags:
    static

Template:
    map(Closure,Dictionary)
Meta-predicate template:
    map(1,*)
Mode and number of proofs:
    map(@callable,+dictionary) - zero_or_more

---

map/3

Maps a closure over each dictionary key-value pair, returning the new dictionary. Fails if the mapped closure attempts to modify the keys.

Compilation flags:
    static

Template:
    map(Closure,OldDictionary,NewDictionary)
Meta-predicate template:
    map(2,*,*)
Mode and number of proofs:
    map(@callable,+dictionary,-dictionary) - zero_or_more

apply/4

Applies a closure to a specific key-value pair, returning the new dictionary. Fails if the key cannot be found or if the mapped closure attempts to modify the key.

Compilation flags:
    static

Template:
    apply(Closure,OldDictionary,Key,NewDictionary)
Meta-predicate template:
    apply(2,*,*,*)
Mode and number of proofs:
    apply(+callable,+dictionary,+key,-dictionary) - zero_or_one

size/2

Number of dictionary entries.

Compilation flags:
    static

Template:
    size(Dictionary,Size)
Mode and number of proofs:
    size(@dictionary,?integer) - one

Protected predicates

(none)

Private predicates

(none)

- Operators

Public predicates

update/0

Updates the project documentation, first by calling a sequence of goals and second by executing a sequence of shell commands. Fails if any goal or shell command fails.

Compilation flags:
    static

Mode and number of proofs:
    update - zero_or_one

doc_goal/1

Table of goals, typically using the diagrams and the lgtdoc tools, used to generate the documentation. Goals are called in the order they are defined and in the context of the user pseudo-object.

Compilation flags:
    static

Template:
    doc_goal(Goal)
Mode and number of proofs:
    doc_goal(?callable) - one_or_more

shell_command/1

Table of shell commands to convert intermediate documentation files into user-friendly documentation. Commands are executed in the order they are defined.

Compilation flags:
    static

Template:
    shell_command(Command)
Mode and number of proofs:
    shell_command(?atom) - one_or_more

1.19 edcg

object

1.19.1 edcg

Multiple hidden parameters: an extension to Prolog's DCG notation. Ported to Logtalk as a hook object.

Availability:
    logtalk_load(edcg(loader))

Author: Peter Van Roy; adapted to Logtalk by Paulo Moura.
Version: 1:4:2
Date: 2020-04-08

Copyright: Copyright (C) 1992 Peter Van Roy
License: MIT

Compilation flags:
    static, context_switching_calls

Implements:
    public expanding
Provides:
    logtalk::message_tokens//2
Uses:
    list
    logtalk

Remarks:

- Usage: Compile source files with objects (or categories) defining EDCGs using the compiler option hook(edcg).

Inherited public predicates:
    goal_expansion/2 term_expansion/2

- Public predicates

- Protected predicates

- Private predicates

    – pred_info/3

    – acc_info/7

    – acc_info/5

Public predicates

(no local declarations; see entity ancestors if any)

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

pred_info/3

Declares predicates that have the listed hidden parameters.

Compilation flags:
    dynamic

Template:
    pred_info(Name,Arity,HiddenParameters)
Mode and number of proofs:
    pred_info(?atom,?integer,?list(atom)) - zero_or_more

acc_info/7

Long form for declaring accumulators.

Compilation flags:
    dynamic

Template:
    acc_info(Accumulator,Term,Left,Right,Joiner,LStart,RStart)
Mode and number of proofs:
    acc_info(?atom,?term,?term,?term,?callable,?term,?term) - zero_or_more

acc_info/5

Short form for declaring accumulators.

Compilation flags:
    dynamic

Template:
    acc_info(Accumulator,Term,Left,Right,Joiner)
Mode and number of proofs:
    acc_info(?atom,?term,?term,?term,?callable) - zero_or_more

pass_info/2

Long form for declaring passed arguments. Passed arguments are conceptually the same as accumulators with =/2 as the joiner function.

Compilation flags:
    dynamic

Template:
    pass_info(Argument,PStart)
Mode and number of proofs:
    pass_info(?atom,?term) - zero_or_more

pass_info/1

Short form for declaring passed arguments. Passed arguments are conceptually the same as accumulators with =/2 as the joiner function.

Compilation flags:
    dynamic

Template:

pass_info(Argument)

Mode and number of proofs:

pass_info(?atom) - zero_or_more

1.22 expecteds

object

1.22.1 either

Types and predicates for extended type-checking and handling of expected terms.

Availability:

logtalk_load(expecteds(loader))

Author: Paulo Moura
Version: 0:7:0
Date: 2021-01-03

Compilation flags:

static, context_switching_calls

Provides:

> type::type/1
>
> type::check/2
>
> arbitrary::arbitrary/1
>
> arbitrary::arbitrary/2

Uses:

> expected
>
> expected(Expected)
>
> random
>
> type

Remarks:

- Type-checking support: Defines a either(ValueType, ErrorType) type for checking expected terms where the value and error terms must be of the given types.

- QuickCheck support: Defines clauses for the type::arbitrary/1-2 predicates to allow generating random values for the either(ValueType, ErrorType) type.

Inherited public predicates:

> (none)

- Public predicates
  - expecteds/2
  - unexpecteds/2
  - partition/3
- Protected predicates
- Private predicates
- Operators

Public predicates

expecteds/2

Returns the values stored in the expected terms that hold a value.

Compilation flags:

> static

Template:

    expecteds(Expecteds,Values)

Mode and number of proofs:

    expecteds(+list(expected),-list) - one

---

unexpecteds/2

Returns the errors stored in the expected terms that hold an error.

Compilation flags:

    static

Template:

    unexpecteds(Expecteds,Errors)

Mode and number of proofs:

    unexpecteds(+list(expected),-list) - one

---

partition/3

Retrieves and partitions the values and errors hold by the expected terms.

Compilation flags:

    static

Template:

    partition(Expecteds,Values,Errors)

Mode and number of proofs:

    partition(+list(expected),-list,-list) - one

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

(no local declarations; see entity ancestors if any)

> expected, expected(Expected), type, arbitrary

object

1.22.2 expected

Constructors for expected terms. An expected term contains either a value or an error. Expected terms should be regarded as opaque terms and always used with the expected/1 object by passing the expected term as a parameter.

Availability:
> logtalk_load(expecteds(loader))

Author: Paulo Moura
Version: 2:1:0
Date: 2021-01-03

Compilation flags:
> static, context_switching_calls

Provides:
> type::type/1
> type::check/2

Remarks:

- Type-checking support: This object also defines a type expected for use with the type library object.

Inherited public predicates:

(none)

- Public predicates
    - of_unexpected/2
    - of_expected/2
    - from_goal/4
    - from_goal/3
    - from_goal/2
    - from_generator/4
    - from_generator/3
    - from_generator/2
- Protected predicates
- Private predicates
- Operators

Public predicates

of_unexpected/2

Constructs an expected term from an error that represent that the expected value is missing.

Compilation flags:
    static

Template:
    of_unexpected(Error,Expected)
Mode and number of proofs:
    of_unexpected(@term,--nonvar) - one

of_expected/2

Constructs an expected term from an expected value.

Compilation flags:
    static

Template:
    of_expected(Value,Expected)
Mode and number of proofs:
    of_expected(@term,--nonvar) - one

---

from_goal/4

Constructs an expected term holding a value bound by calling the given goal. Otherwise returns an expected term with the unexpected goal error or failure represented by the Error argument.

Compilation flags:
    static

Template:
    from_goal(Goal,Value,Error,Expected)
Meta-predicate template:
    from_goal(0,*,*,*)
Mode and number of proofs:
    from_goal(+callable,--term,@term,--nonvar) - one

---

from_goal/3

Constructs an expected term holding a value bound by calling the given goal. Otherwise returns an expected term with the unexpected goal error or the atom fail representing the unexpected failure.

Compilation flags:
    static

Template:
    from_goal(Goal,Value,Expected)

Meta-predicate template:
>   from_goal(0,*,*)

Mode and number of proofs:
>   from_goal(+callable,--term,--nonvar) - one

---

from_goal/2

Constructs an expected term holding a value bound by calling the given closure. Otherwise returns an expected term holding the unexpected closure error or the atom fail representing the unexpected failure.

Compilation flags:
>   static

Template:
>   from_goal(Closure,Expected)

Meta-predicate template:
>   from_goal(1,*)

Mode and number of proofs:
>   from_goal(+callable,--nonvar) - one

---

from_generator/4

Constructs expected terms with the values generated by calling the given goal. On goal error or failure, returns an expected term with the unexpected goal error or failure represented by the Error argument.

Compilation flags:
>   static

Template:
>   from_generator(Goal,Value,Error,Expected)

Meta-predicate template:
>   from_generator(0,*,*,*)

Mode and number of proofs:
>   from_generator(+callable,--term,@term,--nonvar) - one_or_more

---

from_generator/3

Constructs expected terms with the values generated by calling the given goal. On goal error or failure, returns an expected term with, respectively, the unexpected goal error or the atom fail representing the unexpected goal failure.

Compilation flags:
    static

Template:
    from_generator(Goal,Value,Expected)
Meta-predicate template:
    from_generator(0,*,*)
Mode and number of proofs:
    from_generator(+callable,--term,--nonvar) - one_or_more

---

from_generator/2

Constructs expected terms with the values generated by calling the given closure. On closure error or failure, returns an expected term with, respectively, the unexpected closure error or the atom fail representing the unexpected closure failure.

Compilation flags:
    static

Template:
    from_generator(Closure,Expected)
Meta-predicate template:
    from_generator(1,*)
Mode and number of proofs:
    from_generator(+callable,--nonvar) - one_or_more

Protected predicates

> expected(Expected), type

object

1.22.3 expected(Expected)

Expected term predicates. Requires passing an expected term (constructed using the expected object predicates) as a parameter.

Availability:
    logtalk_load(expecteds(loader))

Author: Paulo Moura
Version: 1:5:0
Date: 2020-01-06

Compilation flags:
    static, context_switching_calls

Dependencies:
    (none)

Remarks:
    (none)

Inherited public predicates:
    (none)

- Public predicates
  - is_expected/0
  - is_unexpected/0
  - if_expected/1
  - if_unexpected/1
  - if_expected_or_else/2
  - unexpected/1
  - expected/1
  - map/2
  - flat_map/2
  - either/3
  - or_else/2
  - or_else_get/2
  - or_else_call/2
  - or_else_throw/1
  - or_else_fail/1
- Protected predicates
- Private predicates
- Operators

Public predicates

is_expected/0

True if the expected term holds a value. See also the if_expected/1 predicate.

Compilation flags:
    static

Mode and number of proofs:
    is_expected - zero_or_one

is_unexpected/0

True if the expected term holds an error. See also the if_unexpected/1 predicate.

Compilation flags:
    static

Mode and number of proofs:
    is_unexpected - zero_or_one

---

if_expected/1

Applies a closure when the expected term holds a value using the value as argument. Succeeds otherwise.

Compilation flags:
    static

Template:
    if_expected(Closure)
Meta-predicate template:
    if_expected(1)
Mode and number of proofs:
    if_expected(+callable) - zero_or_more

---

if_unexpected/1

Applies a closure when the expected term holds an error using the error as argument. Succeeds otherwise. Can be used to throw the exception hold by the expected term by calling it the atom throw.

Compilation flags:
    static

Template:
    if_unexpected(Closure)
Meta-predicate template:
    if_unexpected(1)
Mode and number of proofs:

if_unexpected(+callable) - zero_or_more

---

if_expected_or_else/2

Applies either ExpectedClosure or UnexpectedClosure depending on the expected term holding a value or an error.

Compilation flags:
    static

Template:
    if_expected_or_else(ExpectedClosure,UnexpectedClosure)
Meta-predicate template:
    if_expected_or_else(1,1)
Mode and number of proofs:
    if_expected_or_else(+callable,+callable) - zero_or_more

---

unexpected/1

Returns the error hold by the expected term. Throws an error otherwise.

Compilation flags:
    static

Template:
    unexpected(Error)
Mode and number of proofs:
    unexpected(--term) - one_or_error

Exceptions:
    Expected term holds a value:
        existence_error(unexpected_error,Expected)

---

expected/1

Returns the value hold by the expected term. Throws an error otherwise.

Compilation flags:
>   static

Template:
>   expected(Value)

Mode and number of proofs:
>   expected(--term) - one_or_error

Exceptions:
>   Expected term holds an error:
>> existence_error(expected_value,Expected)

---

map/2

When the expected term does not hold an error and mapping a closure with the expected value and the new value as additional arguments is successful, returns an expected term with the new value. Otherwise returns the same expected term.

Compilation flags:
>   static

Template:
>   map(Closure,NewExpected)

Meta-predicate template:
>   map(2,*)

Mode and number of proofs:
>   map(+callable,--nonvar) - one

---

flat_map/2

When the expected term does not hold an error and mapping a closure with the expected value and the new expected term as additional arguments is successful, returns the new expected term. Otherwise returns the same expected term.

Compilation flags:
    static

Template:
    flat_map(Closure,NewExpected)
Meta-predicate template:
    flat_map(2,*)
Mode and number of proofs:
    flat_map(+callable,--nonvar) - one

---

either/3

Applies either ExpectedClosure if the expected term holds a value or UnexpectedClosure if the expected term holds an error. Returns a new expected term if the applied closure is successful. Otherwise returns the same expected term.

Compilation flags:
    static

Template:
    either(ExpectedClosure,UnexpectedClosure,NewExpected)
Meta-predicate template:
    either(2,2,*)
Mode and number of proofs:
    either(+callable,+callable,--nonvar) - one

---

or_else/2

Returns the value hold by the expected term if it does not hold an error or the given default term if the expected term holds an error.

Compilation flags:
    static

Template:
    or_else(Value,Default)
Mode and number of proofs:
    or_else(--term,@term) - one

---

or_else_get/2

Returns the value hold by the expected term if it does not hold an error. Otherwise applies a closure to compute the expected value. Throws an error when the expected term holds an error and a value cannot be computed.

Compilation flags:
    static

Template:
    or_else_get(Value,Closure)
Meta-predicate template:
    or_else_get(*,1)
Mode and number of proofs:
    or_else_get(--term,+callable) - one_or_error

Exceptions:
    Expected term holds an unexpected error and an expected value cannot be computed:
        existence_error(expected_value,Expected)

---

or_else_call/2

Returns the value hold by the expected term if it does not hold an error. Calls a goal deterministically otherwise.

Compilation flags:
    static

Template:
    or_else_call(Value,Goal)
Meta-predicate template:
    or_else_call(*,0)
Mode and number of proofs:
    or_else_call(--term,+callable) - zero_or_one

---

or_else_throw/1

Returns the value hold by the expected term if present. Throws the error hold by the expected term as an exception otherwise.

Compilation flags:
    static

Template:
    or_else_throw(Value)
Mode and number of proofs:
    or_else_throw(--term) - one_or_error

---

or_else_fail/1

Returns the value hold by the expected term if it does not hold an error. Fails otherwise. Usually called to skip over expected terms holding errors.

Compilation flags:
    static

Template:

or_else_fail(Value)

Mode and number of proofs:

or_else_fail(--term) - zero_or_one

1.24 flags

category

1.24.1 flags

Implementation of persistent object flags.

Availability:
    logtalk_load(flags(loader))

Author: Theofrastos Mantadelis
Version: 1:0:0
Date: 2010-11-27

Compilation flags:
    static

Dependencies:
    (none)

Remarks:
    (none)

Inherited public predicates:
    (none)

- Public predicates
    - get_flag_value/2
    - set_flag_value/2
    - set_flag_value/3
    - reset_flags/0
    - reset_flags/1

Public predicates

get_flag_value/2

Gets or tests the value of a flag.

Compilation flags:
    static

Template:
    get_flag_value(Flag,Value)
Mode and number of proofs:
    get_flag_value(+atom,?nonvar) - zero_or_one

set_flag_value/2

Sets the value of a flag.

Compilation flags:
    static

Template:
    set_flag_value(Flag,NewValue)
Mode and number of proofs:
    set_flag_value(+atom,@nonvar) - one

---

set_flag_value/3

Sets the value of a flag, returning the old value.

Compilation flags:
    static

Template:
    set_flag_value(Flag,OldValue,NewValue)
Mode and number of proofs:
    set_flag_value(+atom,?nonvar,@nonvar) - one

---

reset_flags/0

Resets all flags to their default values.

Compilation flags:
    static

Mode and number of proofs:
    reset_flags - one

---

reset_flags/1

Resets all flags in a group to their default values.

Compilation flags:
    static

Template:
    reset_flags(Group)
Mode and number of proofs:
    reset_flags(+atom) - one

---

flag_groups/1

Returns a list of all flag groups.

Compilation flags:
    static

Template:
    flag_groups(Groups)
Mode and number of proofs:
    flag_groups(-list(atom)) - one

---

flag_group_chk/1

Checks if a given atom is a flag group.

Compilation flags:
    static

Template:
    flag_group_chk(Group)
Mode and number of proofs:
    flag_group_chk(+atom) - zero_or_one

---

print_flags/0

Prints a listing of all flags.

Compilation flags:
    static

Mode and number of proofs:
    print_flags - one

---

print_flags/1

Prints a listing of all flags in a group.

Compilation flags:
    static

Template:
    print_flags(Group)
Mode and number of proofs:
    print_flags(+atom) - one

---

defined_flag/6

Gets or test the existing (visible) flag definitions.

Compilation flags:
    static

Template:
    defined_flag(Flag,Group,Type,DefaultValue,Description,Access)
Mode and number of proofs:
    defined_flag(?atom,?atom,?nonvar,?nonvar,?atom,?atom) - zero_or_more

---

built__in__flag/2

True if the argument is a built-in flag type with the specified default value.

Compilation flags:
      static

Template:
      built__in__flag(Type,DefaultValue)
Mode and number of proofs:
      built__in__flag(?atom,?nonvar) - zero__or__more

Protected predicates

unsafe__set__flag__value/2

Sets the value of a flag without performing any validation checks.

Compilation flags:
      static

Template:
      unsafe__set__flag__value(Flag,NewValue)
Mode and number of proofs:
      unsafe__set__flag__value(+atom,@nonvar) - one

---

define__flag/1

Defines a new flag using default options.

Compilation flags:
      static

Template:
      define__flag(Flag)
Mode and number of proofs:
      define__flag(+atom) - one

---

define_flag/2

Defines a new flag using a given set of options (for example, [group(general), type(nonvar), default(true), description(Flag), access(read_write)]).

Compilation flags:
    static

Template:
    define_flag(Flag,Options)
Mode and number of proofs:
    define_flag(+atom,@list) - one

Private predicates

defined_flag_/6

Gets or test the existing flag definitions.

Compilation flags:
    dynamic

Template:
    defined_flag_(Flag,Group,Type,DefaultValue,Description,Access)
Mode and number of proofs:
    defined_flag_(?atom,?atom,?nonvar,?nonvar,?atom,?atom) - zero_or_more

flag_value_/2

Table of flag values.

Compilation flags:
    dynamic

Template:
    flag_value_(Flag,Value)
Mode and number of proofs:
    flag_value_(?atom,?nonvar) - zero_or_more

---

validate/3

Compilation flags:
    static

---

validate_type/1

Compilation flags:
    static

---

is_validator/1

Compilation flags:
    static

Operators

(none)

protocol

1.24.2 flags_validator

Flag validation protocol. Must be implemented by validator objects.

Availability:
    logtalk_load(flags(loader))

Author: Theofrastos Mantadelis

Version: 1:0:0
Date: 2010-11-27

Compilation flags:

- Operators

Public predicates

format/3

Writes a list of arguments after a format specification to the specified output stream.

Compilation flags:
    static

Template:
    format(Stream,Format,Arguments)
Mode and number of proofs:
    format(@stream_or_alias,+atom,@list) - zero_or_one
    format(@stream_or_alias,+list(character_code),@list) - zero_or_one
    format(@stream_or_alias,+list(character),@list) - zero_or_one

format/2

Writes a list of arguments after a format specification to the current output stream.

Compilation flags:
    static

Template:
    format(Format,Arguments)
Mode and number of proofs:
    format(+atom,@list) - zero_or_one
    format(+list(character_code),@list) - zero_or_one
    format(+list(character),@list) - zero_or_one

Public predicates

reset__genint/0

Resets all counters.

Compilation flags:
	static, synchronized

Mode and number of proofs:
	reset_genint - one

---

reset__genint/1

Resets the given counter.

Compilation flags:
	static, synchronized

Template:
	reset_genint(Counter)
Mode and number of proofs:
	reset_genint(+atom) - one

---

genint/2

Returns the next integer for a given counter.

Compilation flags:
	static, synchronized

Template:
	genint(Counter,Integer)
Mode and number of proofs:
	genint(+atom,-non_negative_integer) - one

Protected predicates

(none)

Private predicates

counter__/2

Table of current state of counters.

Compilation flags:
    dynamic

Template:
    counter__(Counter,Latest)
Mode and number of proofs:
    counter__(?atom,?non_negative_integer) - zero_or_more

Operators

(none)

Public predicates

reset_gensym/0

Resets the generator counter for all bases.

Compilation flags:
    static, synchronized

Mode and number of proofs:
    reset_gensym - one

reset_gensym/1

Resets the generator counter for a given base.

Compilation flags:
    static, synchronized

Template:
    reset_gensym(Base)
Mode and number of proofs:
    reset_gensym(+atom) - one

---

gensym/2

Returns a new unique atom with a given base (prefix).

Compilation flags:
    static, synchronized

Template:
    gensym(Base,Unique)
Mode and number of proofs:
    gensym(+atom,-atom) - one

Protected predicates

(none)

Private predicates

base_/2

Table of generator bases and respective counters.

Compilation flags:
    dynamic

Template:
    base_(Base,Counter)
Mode and number of proofs:
    base_(?atom,?integer) - zero_or_more

Operators

(none)

1.28 git

object

Public predicates

branch/2

Returns the name of the current git branch. Fails if the directory is not a git repo or a sub-directory of a git repo directory.

Compilation flags:
    static

Template:
    branch(Directory,Branch)
Mode and number of proofs:
    branch(+atom,?atom) - zero_or_one

commit_author/2

Returns the latest commit author. Fails if the directory is not a git repo or a sub-directory of a git repo directory.

Compilation flags:
    static

Template:
    commit_author(Directory,Author)
Mode and number of proofs:
    commit_author(+atom,-atom) - zero_or_one

commit_date/2

Returns the latest commit date (strict ISO 8601 format). Fails if the directory is not a git repo or a sub-directory of a git repo directory.

Compilation flags:
    static

Template:
    commit_date(Directory,Date)
Mode and number of proofs:
    commit_date(+atom,-atom) - zero_or_one

commit_hash/2

Returns the latest commit hash. Fails if the directory is not a git repo or a sub-directory of a git repo directory.

Compilation flags:
    static

Template:
    commit_hash(Directory,Hash)
Mode and number of proofs:

commit_hash(+atom,-atom) - zero_or_one

---

commit_hash_abbreviated/2

Returns the latest commit abbreviated hash. Fails if the directory is not a git repo or a sub-directory of a git repo directory.

Compilation flags:
    static

Template:
    commit_hash_abbreviated(Directory,Hash)
Mode and number of proofs:
    commit_hash_abbreviated(+atom,-atom) - zero_or_one

---

commit_message/2

Returns the latest commit message. Fails if the directory is not a git repo or a sub-directory of a git repo directory.

Compilation flags:
    static

Template:
    commit_message(Directory,Message)
Mode and number of proofs:
    commit_message(+atom,-atom) - zero_or_one

---

commit_log/3

Returns the git latest commit log output for the given format (see e.g. https://git-scm.com/docs/ [pretty-formats](https://git-scm.com/docs/pretty-formats)). Fails if the directory is not a git repo or a sub-directory of a git repo directory.

Compilation flags:
    static

Template:
    commit_log(Directory,Format,Output)
Mode and number of proofs:
    commit_log(+atom,+atom,-atom) - zero_or_one

Protected predicates

(none)

Private predicates

(none)

Operators

Public predicates

white_space//0

Consumes a single space or tab.

Compilation flags:
    static

Mode and number of proofs:
    white_space - zero_or_one

white_spaces//0

Consumes zero or more spaces and tabs.

Compilation flags:
    static

Mode and number of proofs:
    white_spaces - one

space//0

Consumes a single space.

Compilation flags:
    static

Mode and number of proofs:
    space - zero_or_one

spaces//0

Consumes zero or more spaces.

Compilation flags:
    static

Mode and number of proofs:
    spaces - one

---

tab//0

Consumes a single tab.

Compilation flags:
    static

Mode and number of proofs:
    tab - zero_or_one

---

tabs//0

Consumes zero or more tabs.

Compilation flags:
    static

Mode and number of proofs:
    tabs - one

---

new_line//0

Consumes a single new line.

Compilation flags:
    static

Mode and number of proofs:
    new_line - zero_or_one

new_lines//0

Consumes zero or more new lines.

Compilation flags:
    static

Mode and number of proofs:
    new_lines - one

blank//0

Consumes a single space, tab, vertical tab, line feed, or new line.

Compilation flags:
    static

Mode and number of proofs:
    blank - zero_or_one

blanks//0

Consumes zero or more spaces, tabs, vertical tabs, line feeds, or new lines.

Compilation flags:
    static

Mode and number of proofs:
    blanks - one

---

non_blank//1

Returns a single non-blank character or character code.

Compilation flags:
    static

Template:
    non_blank(NonBlank)
Mode and number of proofs:
    non_blank(-atomic) - zero_or_one

---

non_blanks//1

Returns a (possibly empty) list of non-blank characters or character codes.

Compilation flags:
    static

Template:
    non_blanks(NonBlanks)
Mode and number of proofs:
    non_blanks(-list(atomic)) - one

---

control//0

Consumes a single control character or character code. Support for the null control character depends on the Prolog backend.

Compilation flags:
    static

Mode and number of proofs:
    control - zero_or_one

---

controls//0

Consumes zero or more control characters or character codes. Support for the null control character depends on the Prolog backend.

Compilation flags:
    static

Mode and number of proofs:
    controls - one

- Operators

Public predicates

ipv4//1

Parses an IPv4 network address in the format XXX.XXX.XXX.XXX where each XXX is an octet (i.e., an integer between 0 and 255).

Compilation flags:
   static

Template:
    ipv4(Octets)
Mode and number of proofs:
    ipv4(?list(integer)) - zero_or_one

---

ipv6//1

Parses an IPv6 network address in the format XXXX.XXXX.XXXX.XXXX.XXXX.XXXX.XXXX.XXXX
where each X is a hexadecimal digit.

Compilation flags:
    static

Template:
    ipv6(HexDigits)
Mode and number of proofs:
    ipv6(?list(integer)) - one

Protected predicates

Public predicates

bit//1

Parses a single bit.

Compilation flags:
    static

Template:
    bit(Bit)
Mode and number of proofs:
    bit(?integer) - zero_or_one

---

bits//1

Parses a sequence of one or more bits.

Compilation flags:
    static

Template:
    bits(Bits)
Mode and number of proofs:
    bits(?list(integer)) - zero_or_one

---

digit//1

Parses a single decimal digit.

Compilation flags:
    static

Template:
    digit(Digit)
Mode and number of proofs:
    digit(?atomic) - zero_or_one

digits//1

Parses a sequence of zero of more digits.

Compilation flags:
    static

Template:
    digits(Digits)
Mode and number of proofs:
    digits(?list(atomic)) - one

hex_digit//1

Parses a single hexa-decimal digit.

Compilation flags:
    static

Template:
    hex_digit(HexDigit)
Mode and number of proofs:
    hex_digit(?atomic) - zero_or_one

hex_digits//1

Parses a sequence of zero or more hexa-decimal digits.

Compilation flags:
    static

Template:
    hex_digits(HexDigits)
Mode and number of proofs:

hex_digits(?list(atomic)) - one

---

natural//1

Parses a natural number (a non signed integer).

Compilation flags:
    static

Template:
    natural(Natural)
Mode and number of proofs:
    natural(?non_negative_integer) - zero_or_one

---

integer//1

Parses an integer.

Compilation flags:
    static

Template:
    integer(Integer)
Mode and number of proofs:
    integer(?integer) - zero_or_one

---

float//1

Parses a float.

Compilation flags:
    static

Template:

    float(Float)

Mode and number of proofs:

    float(?float) - zero_or_one

---

number//1

Parses a number (an integer or a float).

Compilation flags:

    static

Template:

    number(Number)

Mode and number of proofs:

    number(?number) - zero_or_one

---

sign//1

Parses a number sign (plus or minus).

Compilation flags:

    static

Template:

    sign(Sign)

Mode and number of proofs:

    sign(?atomic) - zero_or_one

---

dot//1

Parses a decimal dot.

Compilation flags:
    static

Template:
    dot(Dot)
Mode and number of proofs:
    dot(?atomic) - zero_or_one

Protected predicates

Public predicates

zero_or_more//2

Eagerly collect zero or more terminals that satisfy the given closure.

Compilation flags:
    static

Template:
    zero_or_more(Closure,Terminals)
Meta-predicate template:
    zero_or_more(1,*)
Mode and number of proofs:
    zero_or_more(+callable,-list(atomic)) - one

one_or_more//2

Eagerly collect one or more terminals that satisfy the given closure.

Compilation flags:
    static

Template:
    one_or_more(Closure,Terminals)
Meta-predicate template:
    one_or_more(1,*)
Mode and number of proofs:
    one_or_more(+callable,-list(atomic)) - zero_or_one

___

zero_or_more//1

Eagerly collect zero or more terminals.

Compilation flags:
    static

Template:
    zero_or_more(Terminals)
Mode and number of proofs:
    zero_or_more(-list(atomic)) - one

___

one_or_more//1

Eagerly collect one or more terminals.

Compilation flags:
    static

Template:
    one_or_more(Terminals)
Mode and number of proofs:
    one_or_more(-list(atomic)) - zero_or_one

zero_or_more//0

Eagerly parse zero or more terminals.

Compilation flags:
    static

Mode and number of proofs:
    zero_or_more - one

one_or_more//0

Eagerly parse one or more terminals.

Compilation flags:
    static

Mode and number of proofs:
    one_or_more - zero_or_one

without//2

Collects input terminals until one of the stop terminals is found. The stop terminals are excluded from the collected terminals.

Compilation flags:
    static

Template:
    without(StopTerminals,Terminals)
Mode and number of proofs:
    without(+list(atomic),-list(atomic)) - one

Public predicates

insert/4

Inserts the new pair into a heap, returning the updated heap.

Compilation flags:
    static

Template:
    insert(Key,Value,Heap,NewHeap)
Mode and number of proofs:
    insert(+key,+value,+heap,-heap) - one

---

insert_all/3

Inserts a list of pairs into a heap, returning the updated heap.

Compilation flags:
    static

Template:
    insert_all(List,Heap,NewHeap)
Mode and number of proofs:
    insert_all(@list(pairs),+heap,-heap) - one

---

delete/4

Deletes and returns the top pair in a heap returning the updated heap.

Compilation flags:
    static

Template:
    delete(Heap,TopKey,TopValue,NewHeap)
Mode and number of proofs:
    delete(+heap,?key,?value,-heap) - zero_or_one

merge/3

Merges two heaps.

Compilation flags:
    static

Template:
    merge(Heap1,Heap2,NewHeap)
Mode and number of proofs:
    merge(+heap,+heap,-heap) - one

empty/1

True if the heap is empty.

Compilation flags:
    static

Template:
    empty(Heap)
Mode and number of proofs:
    empty(@heap) - zero_or_one

size/2

Returns the number of heap elements.

Compilation flags:
    static

Template:
    size(Heap,Size)
Mode and number of proofs:

size(+heap,?integer) - zero_or_one

---

as_list/2

Returns the current set of pairs in the heap as a list, sorted into ascending order of the keys.

Compilation flags:
     static

Template:
     as_list(Heap,List)
Mode and number of proofs:
     as_list(+heap,-list) - one

---

as_heap/2

Constructs a heap from a list of pairs.

Compilation flags:
     static

Template:
     as_heap(List,Heap)
Mode and number of proofs:
     as_heap(+list,-heap) - one

---

top/3

Returns the top pair in the heap. Fails if the heap is empty.

Compilation flags:
     static

Template:

top(Heap,TopKey,TopValue)

Mode and number of proofs:

top(+heap,?key,?value) - zero_or_one

---

top_next/5

Returns the top pair and the next pair in the heap. Fails if the heap does not have at least two elements.

Compilation flags:

static

Template:

top_next(Heap,TopKey,TopValue,NextKey,NextValue)

Mode and number of proofs:

top_next(+heap,?key,?value,?key,?value) - zero_or_one

help/0

Prints instructions on how to use the help tool.

Compilation flags:
    static

Mode and number of proofs:
    help - one

(/)/2

Provides help on the Functor/Arity built-in control construct, directive, predicate, or method.

Compilation flags:
    static

Template:
    Functor/Arity
Mode and number of proofs:
    +atom/ +integer - zero_or_one

(///)/2

Provides help on the Functor//Arity built-in non-terminal.

Compilation flags:
    static

Template:
    Functor//Arity
Mode and number of proofs:
    +atom// +integer - zero_or_one

---

completion/2

Provides a completion pair, Completion-Page, for a given prefix.

Compilation flags:
    static

Template:
    completion(Prefix,Completion)
Mode and number of proofs:
    completion(+atom,-pair) - zero_or_more

---

completions/2

Provides a list of completions pairs, Completion-Page, for a given prefix.

Compilation flags:
    static

Template:
    completions(Prefix,Completions)
Mode and number of proofs:
    completions(+atom,-lists(pair)) - zero_or_more

---

built_in_directive/4

Provides access to the HTML documenting files describing built-in directives.

Compilation flags:
    static

Template:
    built_in_directive(Functor,Arity,Directory,Basename)
Mode and number of proofs:
    built_in_directive(?atom,?integer,-atom,-atom) - zero_or_more

---

built_in_predicate/4

Provides access to the HTML documenting files describing built-in predicates.

Compilation flags:
    static

Template:
    built_in_predicate(Functor,Arity,Directory,Basename)
Mode and number of proofs:
    built_in_predicate(?atom,?integer,-atom,-atom) - zero_or_more

---

built_in_method/4

Provides access to the HTML documenting files describing built-in methods.

Compilation flags:
    static

Template:
    built_in_method(Functor,Arity,Directory,Basename)
Mode and number of proofs:
    built_in_method(?atom,?integer,-atom,-atom) - zero_or_more

---

control_construct/4

Provides access to the HTML documenting files describing built-in control constructs.

Compilation flags:
    static

Template:
    control_construct(Functor,Arity,Directory,Basename)
Mode and number of proofs:
    control_construct(?atom,?integer,-atom,-atom) - zero_or_more

---

built_in_non_terminal/4

Provides access to the HTML documenting files describing built-in DCG non-terminals.

Compilation flags:
    static

Template:
    built_in_non_terminal(Functor,Arity,Directory,Basename)
Mode and number of proofs:
    built_in_non_terminal(?atom,?integer,-atom,-atom) - zero_or_more

---

library/0

Provides help on the standard Logtalk library.

Compilation flags:
    static

Mode and number of proofs:
    library - one

---

library/1

Provides help on the standard Logtalk libraries, library predicates, and library non-terminals.

Compilation flags:
    static

Template:
    library(Topic)
Mode and number of proofs:
    library(+atom) - zero_or_one
    library(+predicate_indicator) - zero_or_one
    library(+non_terminal_indicator) - zero_or_one

---

entity/1

Provides help on Logtalk entities (objects, protocols, or categories).

Compilation flags:
    static

Template:
    entity(Entity)
Mode and number of proofs:
    entity(+entity_identifier) - zero_or_one

---

manuals/0

Provides access to the Logtalk User and Reference manuals.

Compilation flags:
    static

Mode and number of proofs:
    manuals - one

1.34 hook_objects

object

1.34.1 backend_adapter_hook

This hook object applies the expansion rules defined in the Prolog backend adapter file.

Availability:
    logtalk_load(hook_objects(loader))

Author: Paulo Moura
Version: 1:0:0
Date: 2020-02-17

Compilation flags:
    static, context_switching_calls

Implements:
    public expanding

Remarks:
    (none)

---

object

1.34.8 print_goal_hook

Use this object to easily print entity predicate goals before, after, or before and after calling them.

Availability:
    logtalk_load(hook_objects(loader))

Author: Paulo Moura
Version: 1:0:0
Date: 2020-03-14

Compilation flags:
    static, context_switching_calls

Implements:

---

public expanding

Remarks:

- Usage: Mark a goal to be printed by prefixing it with an operator. Printing uses a comment message.
- To print goal before calling it: - Goal.
- To print goal after calling it: + Goal.
- To print goal before and after calling it: * Goal.
- Operators: This hook object uses the standard - and + prefix operators and also defines a global * prefix operator with the same type and priority.

Public predicates

generate/2

Generates HTML content using the representation specified in the first argument (stream(Stream) or file(Path)) for the term in the second argument.

Compilation flags:
    static

Template:
    generate(Sink,Term)
Mode and number of proofs:
    generate(+compound,++term) - one_or_error

void_element/1

Enumerates, by backtracking, all void elements.

Compilation flags:
    static

Template:
    void_element(Element)

Mode and number of proofs:
    void_element(?atom) - zero_or_more

---

normal_element/2

Enumerates, by backtracking, all normal elements. The value of the Display argument is either inline or block.

Compilation flags:
    static

Template:
    normal_element(Element,Display)
Mode and number of proofs:
    normal_element(?atom,?atom) - zero_or_more

Protected predicates

(none)

Private predicates

doctype/1

Doctype text.

Compilation flags:
    static

Template:
    doctype(DocType)
Mode and number of proofs:
    doctype(?atom) - one

Operators

(none)

object

Public predicates

new/3

Constructs a new interval given start and end points. The start point must strictly precede the end point.

Compilation flags:
    static

Template:
    new(Start,End,Interval)
Mode and number of proofs:
    new(@ground,@ground,-interval) - zero_or_one

valid/1

True if Interval is a valid interval.

Compilation flags:
    static

Template:
    valid(Interval)
Mode and number of proofs:
    valid(@interval) - zero_or_one

before/2

True if Interval1 takes place before Interval2.

Compilation flags:
    static

Template:
    before(Interval1,Interval2)
Mode and number of proofs:
    before(@interval,@interval) - zero_or_one

after/2

True if Interval1 takes place after Interval2.

Compilation flags:
    static

Template:
    after(Interval1,Interval2)
Mode and number of proofs:

after(@interval,@interval) - zero_or_one

meets/2

True if Interval1 meets Interval2.

Compilation flags:
    static

Template:
    meets(Interval1,Interval2)
Mode and number of proofs:
    meets(@interval,@interval) - zero_or_one

met_by/2

True if Interval1 is met by Interval2.

Compilation flags:
    static

Template:
    met_by(Interval1,Interval2)
Mode and number of proofs:
    met_by(@interval,@interval) - zero_or_one

overlaps/2

True if Interval1 overlaps with Interval2.

Compilation flags:
    static

Template:

overlaps(Interval1,Interval2)

Mode and number of proofs:

overlaps(@interval,@interval) - zero_or_one

---

overlapped_by/2

True if Interval1 is overlapped by Interval2.

Compilation flags:

static

Template:

overlapped_by(Interval1,Interval2)

Mode and number of proofs:

overlapped_by(@interval,@interval) - zero_or_one

---

starts/2

True if Interval1 starts Interval2.

Compilation flags:

static

Template:

starts(Interval1,Interval2)

Mode and number of proofs:

starts(@interval,@interval) - zero_or_one

---

started_by/2

True if Interval1 is started by Interval2.

Compilation flags:
    static

Template:
    started_by(Interval1,Interval2)
Mode and number of proofs:
    started_by(@interval,@interval) - zero_or_one

---

during/2

True if Interval1 occurs during Interval2.

Compilation flags:
    static

Template:
    during(Interval1,Interval2)
Mode and number of proofs:
    during(@interval,@interval) - zero_or_one

---

contains/2

True if Interval1 contains Interval2.

Compilation flags:
    static

Template:
    contains(Interval1,Interval2)
Mode and number of proofs:
    contains(@interval,@interval) - zero_or_one

---

finishes/2

True if Interval1 finishes Interval2.

Compilation flags:
    static

Template:
    finishes(Interval1,Interval2)
Mode and number of proofs:
    finishes(@interval,@interval) - zero_or_one

---

finished_by/2

True if Interval1 is finished by Interval2.

Compilation flags:
    static

Template:

1.38 iso8601

object

1.38.1 iso8601

ISO 8601 (and European civil calendar) compliant library of date predicates.

Availability:
> logtalk_load(iso8601(loader))

Author: Daniel L. Dudley
Version: 1:0:3
Date: 2019-10-09

Compilation flags:
> static, context_switching_calls

Uses:
> os

Remarks:

- Scope: This object currently provides a powerful, versatile and efficient set of date-handling predicates, which–thanks to Logtalk–may be used as is on a wide range of Prolog compilers. Besides taking time to familiarize oneself with each predicate, the user should take note of the following information.

- Validation of dates: Date parts are not validated–that is the caller's responsibility! However, not being quite heartless yet, we do provide a predicate for this purpose.

- Date arithmetic: Many of the examples illustrate a simplified method of doing date arithmetic. Note, however, that we do not generally recommend this practice–it is all too easy to make mistakes. The safest way of finding the day difference between two dates is to first convert the dates to their Julian day numbers and then subtract one from the other. Similarly, the safe way to add or subtract a day offset to a particular date is to first convert the date to its Julian day number, add or subtract the day offset, and then convert the result to its corresponding date.

- BC years: ISO 8601 specifies that the Gregorian calendar be used, yet requires that years prior to 1 AD be handled arithmetically, i.e., the year we know as 1 BC is year 0, 2 BC is year -1, 3 BC is year -2 and so on. We do not follow ISO 8601 with regard to the handling of BC years. Our date predicates will accept and interpret an input year 0 as 1 BC; however, a negative year, Year, should always be interpreted as abs(Year) =:= Year BC. We believe that the average person will find our handling of BC years more user-friendly than the ISO 8601 one, but we encourage feedback from users with a view to a possible change in future versions.

- Week numbers: It is possible for a day (date) to have a week number that belongs to another year. Up to three of the first days of a calendar year may belong to the last week (number) of the prior calendar year, and up to three days of the last days of a calendar year may belong to the first week (number) of the next calendar year. It for this reason that the Week parameter in date/6-7 is a compound term, namely week(WeekNo,ActualYear).

- Computation of Gregorian Easter Sunday: The algorithm is based upon the "Gaussian rule". Proleptic use is limited to years > 1582 AD, that is, after the introduction of the Gregorian calendar.

- Some Christian feast day offsets from Easter Sunday: Carnival Monday: -48 days, Mardi Gras (Shrove Tuesday): -47 days, Ash Wednesday: -46 days, Palm Sunday: -7 days, Easter Friday: -2 days, Easter Saturday: -1 day, Easter Monday: +1 day, Ascension of Christ: +39 days, Whitsunday: +49 days, Whitmonday: +50 days, Feast of Corpus Christi: +60 days.

Inherited public predicates:

    (none)

- Public predicates

- Operators

Public predicates

date/4

Get the system date and/or its Julian Day # or convert a Julian Day # to/from given date parts.

Compilation flags:
    static

Template:
    date(JD,Year,Month,Day)
            JD - Julian day serial number.
            Year - 0 or negative if converted BC year, positive otherwise.
            Month - Normally an integer between 1 and 12 inclusive.
            Day - Normally an integer between 1 and 31 inclusive depending upon month.
Mode and number of proofs:
    date(?integer,?integer,?integer,?integer) - zero_or_one

Examples:
    Current date (i.e., today)
            date(JD,Year,Month,Day)
            JD=2453471,Year=2005,Month=4,Day=10
    Convert a date to its Julian day number
            date(JD,2000,2,29)
            JD=2451604
    Convert a Julian day number to its date
            date(2451604,Year,Month,Day)
            Year=2000,Month=2,Day=29
    What is the date of day # 60 in year 2000?
            date(JD,2000,1,60)
            JD=2451604
    What is the Julian of the 1st day prior to 2000-1-1?
            date(JD,2000,1,0)
            JD=2451544
    What is the Julian of the 60th day prior to 2000-1-1?
            date(JD,2000,1,-59)
            JD=2451485
    Illegal date is auto-adjusted (see also next query)
            date(JD,1900,2,29)
            JD=2415080

This is the correct date!
date(2415080,Year,Month,Day)
Year=1900,Month=3,Day=1

---

date/5

Ditto date/4 + get/check its day-of-week #.

Compilation flags:
static

Template:
date(JD,Year,Month,Day,DoW)
JD - Julian day serial number.
Year - 0 or negative if converted BC year, positive otherwise.
Month - Normally an integer between 1 and 12 inclusive.
Day - Normally an integer between 1 and 31 inclusive depending upon month.
DoW - Day of week, where Monday=1, Tuesday=2, …, Sunday=7.

Mode and number of proofs:
date(?integer,?integer,?integer,?integer,?integer) - zero_or_one

Examples:
Get the Julian and the day-of-week # of a date
date(JD,2000,2,29,DoW)
JD=2451604,DoW=2
Check the validity of a given date (day-of-week is 2, not 4)
date(_,2002,3,5,4)
no
Get the Julian day of a given date if it is a Sunday
date(JD,2004,2,29,7)
JD=2453065
Get the date and day-of-week # of a Julian
date(2451545,Year,Month,Day,DoW)
Year=2000,Month=1,Day=1,DoW=6

---

date/6

Ditto date/5 + get/check its week #.

Compilation flags:
    static

Template:
    date(JD,Year,Month,Day,DoW,Week)
        JD - Julian day serial number.
        Year - 0 or negative if converted BC year, positive otherwise.
        Month - Normally an integer between 1 and 12 inclusive.
        Day - Normally an integer between 1 and 31 inclusive depending upon month.
        DoW - Day of week, where Monday=1, Tuesday=2, ..., Sunday=7.
        Week - Compound term, week(WeekNo,ActualYear), of a day.
Mode and number of proofs:
    date(?integer,?integer,?integer,?integer,?integer,?compound) - zero_or_one

Examples:
    Get the day-of-week and week number of a date
        date(_,2000,1,1,DoW,Week)
        DoW=6,Week=week(52,1999)
    Get the week number and year of this week
        date(_,_,_,_,_,Week)
        Week=week(7,2004)
    Get the Julian number and the week of a date if it is a Sunday
        date(JD,2004,2,29,7,Week)
        JD=2453065,Week=week(9,2004)
    Get the day-of-week and week of a Julian day number
        date(2453066,_,_,_,DoW,Week)
        DoW=1,Week=week(10,2004)
    Check that given date data matches
        date(_,2004,3,1,1,week(10,2004))
        yes
    What is the date of a day of week (default is 1) in given week # and year?
        date(_,Year,Month,Day,DoW,week(26,2004))
        Year=2004,Month=6,Day=21,DoW=1
    Ditto for Sunday
        date(_,Year,Month,Day,7,week(1,2005))
        Year=2005,Month=1,Day=9
    Ditto for Tuesday in following week
        date(_,Year,Month,Day,9,week(1,2005))
        Year=2005,Month=1,Day=11
    Ditto for Thursday in the prior week
        date(_,Year,Month,Day,4,week(0,2005))

> Year=2004,Month=12,Day=30

Ditto for Tuesday two weeks prior

> date(_,Year,Month,Day,2,week(-1,2005))
>
> Year=2004,Month=12,Day=21

Ditto for Saturday

> date(_,Year,Month,Day,6,week(53,2004))
>
> Year=2005,Month=1,Day=1

Ditto for Monday (note automatic compensation of nonexistent week number)

> date(_,Year,Month,Day,1,week(60,2004))
>
> Year=2005,Month=2,Day=14

---

date/7

Ditto date/6 + get/check its day-of-year #.

Compilation flags:

> static

Template:

> date(JD,Year,Month,Day,DoW,Week,DoY)
>
> > JD - Julian day serial number.
> >
> > Year - 0 or negative if converted BC year, positive otherwise.
> >
> > Month - Normally an integer between 1 and 12 inclusive.
> >
> > Day - Normally an integer between 1 and 31 inclusive depending upon month.
> >
> > DoW - Day of week, where Monday=1, Tuesday=2, …, Sunday=7.
> >
> > Week - Compound term, week(WeekNo,ActualYear), of a day.
> >
> > DoY - Day of year (NB! calendar year, not week # year).

Mode and number of proofs:

> date(?integer,?integer,?integer,?integer,?integer,?compound,?integer) - zero_or_one

Examples:

> Get the date and day-of-year of a Julian number
>
> > date(2451649,Year,Month,Day,_,_,DoY)
> >
> > Year=2000,Month=4,Day=14,DoY=105
>
> Get the Julian number, week number and day-of-year of a date, confirming that it is a Sunday
>
> > date(JD,2004,2,29,7,Week,DoY)
> >
> > JD=2453065,Week=week(9,2004),DoY=60
>
> Confirm that a date is, in fact, a specific day-of-year
>
> > date(_,2004,3,1,_,_,61)
> >
> > yes
>
> Get the Julian number, week day and day-of-year of a date
>
> > date(JD,2004,10,18,DoW,_,DoY)

JD=2453297,DoW=1,DoY=292

Get today's day-of-year

date(_,_,_,_,_,_,DoY)

DoY=54

Get all missing date data (excl. Julian number) for the 60th calendar day of 2004

date(_,2004,Month,Day,DoW,Week,60)

Month=2,Day=29,DoW=7,Week=week(9,2004)

Match given date data and, if true, return the missing data (excl. Julian number)

date(_,2004,3,Day,DoW,Week,61)

Day=1,DoW=1,Week=week(10,2004)

Ditto (the 61st day-of-year cannot be both day 1 and 2 of the month)

date(_,2004,_,2,_,_,61)

no

---

date_string/3

Conversion between an ISO 8601 compliant date string and its components (truncated and expanded date representations are currently unsupported). Note that date components are not validated; that is the caller's responsibility!

Compilation flags:

static

Template:

date_string(Format,Components,String)

Format - ISO 8601 format.

Components - When bound and String is free, either a Julian number or a [Year,Month,Day] term; it binds to the system day/date if free When free and String is bound, it binds to an integer list representing the numeric elements of String.

String - ISO 8601 formatted string correspondent to Components.

Mode and number of proofs:

date_string(+atom,+integer,?atom) - zero_or_one

date_string(+atom,?list,?atom) - zero_or_one

Examples:

Date, complete, basic (section 5.2.1.1)

date_string('YYYYMMDD',[2004,2,29],String)

String='20040229'

Date, complete, basic (section 5.2.1.1)

date_string('YYYYMMDD',Components,'20040229')

Components=[2004,2,29]

Date, complete, extended (section 5.2.1.1)

date_string('YYYY-MM-DD',[2003,12,16],String)

        String='2003-12-16'
Date, complete, extended (section 5.2.1.1)
        date_string('YYYY-MM-DD',Components,'2003-12-16')
        Components=[2003,12,16]
Date, complete, extended (section 5.2.1.1)
        date_string('YYYY-MM-DD',_,String)
        String='2004-02-17'
Date, complete, extended (section 5.2.1.1)
        date_string('YYYY-MM-DD',Components,'2004-02-17')
        Components=[2004,2,17]
Date, reduced, month (section 5.2.1.2 a)
        date_string('YYYY-MM',[2004,9,18],String)
        String='2004-09'
Date, reduced, month (section 5.2.1.2 a)
        date_string('YYYY-MM',Components,'2004-09')
        Components=[2004,9]
Date, reduced, year (section 5.2.1.2 b)
        date_string('YYYY',[1900,7,24],String)
        String='1900'
Date, reduced, year (section 5.2.1.2 b)
        date_string('YYYY',Components,'1900')
        Components=[1900]
Date, reduced, century (section 5.2.1.2 c)
        date_string('YY',2456557,String)
        String='20'
Date, reduced, century (section 5.2.1.2 c)
        date_string('YY',Components,'20')
        Components=[20]
Date, ordinal, complete (section 5.2.2.1)
        date_string('YYYYDDD',[2005,3,25],String)
        String='2005084'
Date, ordinal, complete (section 5.2.2.1)
        date_string('YYYYDDD',Components,'2005084')
        Components=[2005,84]
Date, ordinal, extended (section 5.2.2.1)
        date_string('YYYY-DDD',[1854,12,4],String)
        String='1854-338'
Date, ordinal, extended (section 5.2.2.1)
        date_string('YYYY-DDD',Components,'1854-338')
        Components=[1854,338]
Week, complete, basic (section 5.2.3.1)
        date_string('YYYYWwwD',[2000,1,2],String)
        String='1999W527'
Week, complete, basic (section 5.2.3.1)
        date_string('YYYYWwwD',Components,'1999W527')
        Components=[1999,52,7]
Week, complete, extended (section 5.2.3.1)

      date_string('YYYY-Www-D',[2003,12,29],String)

      String='2004-W01-1'

Week, complete, extended (section 5.2.3.1)

      date_string('YYYY-Www-D',Components,'2004-W01-1')

      Components=[2004,1,1]

Week, complete, extended (section 5.2.3.1)

      date_string('YYYY-Www-D',2453167,String)

      String='2004-W24-4'

Week, complete, extended (section 5.2.3.1)

      date_string('YYYY-Www-D',Components,'2004-W24-4')

      Components=[2004,24,4]

Week, reduced, basic (section 5.2.3.2)

      date_string('YYYYWww',[2004,2,29],String)

      String='2004W09'

Week, reduced, basic (section 5.2.3.2)

      date_string('YYYYWww',Components,'2004W09')

      Components=[2004,9]

Week, reduced, extended (section 5.2.3.2)

      date_string('YYYY-Www',[2004,2,29],String)

      String='2004-W09'

Week, reduced, extended (section 5.2.3.2)

      date_string('YYYY-Www',Components,'2004-W09')

      Components=[2004,9]

---

valid_date/3

Validate a given date in the Gregorian calendar.

Compilation flags:

    static

Template:

    valid_date(Year,Month,Day)

Mode and number of proofs:

    valid_date(+integer,+integer,+integer) - zero_or_one

Examples:

    Yes, the recent millennium was a leap year

      valid_date(2000,2,29)

      yes

    2004 was also a leap year

      valid_date(2004,2,29)

yes
Only 30 days in April
    valid_date(2004,4,31)
    no
1 BC was a leap year
    valid_date(-1,2,29)
    yes

---

leap_year/1

Succeed if given year is a leap year in the Gregorian calendar.

Compilation flags:
    static

Template:
    leap_year(Year)
        Year - The Gregorian calendar year to investigate. If free, it binds to the system year.
Mode and number of proofs:
    leap_year(?integer) - zero_or_one

Examples:
    No, the prior centenary was not a leap year
        leap_year(1900)
        no
    The recent millennium
        leap_year(2000)
        yes
    This year
        leap_year(Year)
        Year=2004
    This year (equivalent to prior query)
        leap_year(_)
        yes
    Next centennial
        leap_year(2100)
        no
    Year 0, equivalent to 1 BC
        leap_year(0)
        yes
    1 BC
        leap_year(-1)

yes
4 BC
leap_year(-4)
no
5 BC
leap_year(-5)
yes

---

calendar_month/3

Compute a calendar month.

Compilation flags:
    static

Template:
    calendar_month(Year,Month,Calendar)
        Year - The calendar year.
        Month - The calendar month.
        Calendar - A compound term, m/3, composed of three main arguments specifying year, month, and a list of week and week day numbers (calendar body).
Mode and number of proofs:
    calendar_month(?integer,?integer,-compound) - zero_or_one

Examples:
    Compute the calendar of March, 2005
        calendar_month(2005,3,Calendar)
        Calendar=m(2005,3,[w(9,[0,1,2,3,4,5,6]),w(10,[7,8,9,10,11,12,13]),w(11,[14,15,16,17,18,19,20]),
        w(12,[21,22,23,24,25,26,27]),w(13,[28,29,30,31,0,0,0]),w(0,[0,0,0,0,0,0,0])])

---

easter_day/3

Compute a Gregorian Easter Sunday.

Compilation flags:
    static

Template:

easter_day(Year,Month,Day)

> Year - Integer specifying the year to be investigated.

> Month - Month in which Easter Sunday falls for given year.

> Day - Day of month in which Easter Sunday falls for given year.

Mode and number of proofs:

> easter_day(?integer,-integer,-integer) - zero_or_one

Examples:

> Compute Easter Sunday for a particular year

> > easter_day(2006,Month,Day)

> > Month=4,Day=16

> Compute Easter Sunday for the current year

> > easter_day(Year,Month,Day)

> > Year=2005,Month=3,Day=27

protocol

1.40.4 java_access_protocol

Protocol for a minimal abstraction for calling Java from Logtalk using familiar message-sending syntax.

Availability:
  logtalk_load(java(loader))

Author: Paulo Moura and Sergio Castro
Version: 1:2:1
Date: 2023-03-16

Compilation flags:
  static

Dependencies:
  (none)

Remarks:
  (none)

Inherited public predicates:

(none)

- Public predicates
    - get_field/2
    - set_field/2
    - new/2
    - new/1
    - invoke/1
    - invoke/2
- Protected predicates
- Private predicates
- Operators

Public predicates

get_field/2

Gets the value of a class or object field.

Compilation flags:
    static

Template:
    get_field(Field,Value)
Mode and number of proofs:
    get_field(+atom,?nonvar) - zero_or_one

set_field/2

Sets the value of a class or object field.

Compilation flags:
    static

Template:
    set_field(Field,Value)

Mode and number of proofs:
    set_field(+atom,+nonvar) - one

---

new/2

Creates a new instance using the specified parameter values.

Compilation flags:
    static

Template:
    new(Parameters,Instance)
Mode and number of proofs:
    new(+list(nonvar),-reference) - one

---

new/1

Creates a new instance using default parameter values.

Compilation flags:
    static

Template:
    new(Instance)
Mode and number of proofs:
    new(-reference) - one

---

invoke/1

Invokes a method. This is a more efficient compared with relying on the forward/1 handler to resolve methods.

Compilation flags:
    static

Template:
    invoke(Method)
Mode and number of proofs:
    invoke(@nonvar) - one

invoke/2

Invokes a method. This is a more efficient compared with relying on the forward/1 handler to resolve methods.

Compilation flags:
    static

Template:
    invoke(Functor,Arguments)
Mode and number of proofs:
    invoke(@nonvar,@list) - one

Author: Paulo Moura
Version: 1:6:0
Date: 2023-03-13

Compilation flags:
>   static

Dependencies:
>   (none)

Remarks:
>   (none)

Inherited public predicates:
>   (none)

- Public predicates
    - value_reference/2
    - true/1
    - false/1
    - void/1
    - null/1

Public predicates

value_reference/2

Returns an opaque term that represents the Java value with the given name.

Compilation flags:
    static

Template:
    value_reference(Value,Reference)
Mode and number of proofs:
    value_reference(?atom,--ground) - one_or_more

true/1

Returns an opaque term that represents the Java value true.

Compilation flags:
    static

Template:
    true(Reference)
Mode and number of proofs:
    true(--ground) - one

---

false/1

Returns an opaque term that represents the Java value false.

Compilation flags:
    static

Template:
    false(Reference)
Mode and number of proofs:
    false(--ground) - one

---

void/1

Returns an opaque term that represents the Java value void.

Compilation flags:
    static

Template:
    void(Reference)
Mode and number of proofs:
    void(--ground) - one

---

null/1

Returns an opaque term that represents the Java value null.

Compilation flags:
    static

Template:
    null(Reference)
Mode and number of proofs:
    null(--ground) - one

---

is_true/1

True when the argument is the Java value true. Fails if the argument is not instantiated.

Compilation flags:
    static

Template:
    is_true(Reference)
Mode and number of proofs:
    is_true(@term) - zero_or_one

---

is_false/1

True when the argument is the Java value false. Fails if the argument is not instantiated.

Compilation flags:
    static

Template:
    is_false(Reference)
Mode and number of proofs:
    is_false(@term) - zero_or_one

---

is_void/1

True when the argument is the Java value void. Fails if the argument is not instantiated.

Compilation flags:
    static

Template:
    is_void(Reference)
Mode and number of proofs:
    is_void(@term) - zero_or_one

---

is_null/1

True when the argument is the Java value null. Fails if the argument is not instantiated.

Compilation flags:
    static

Template:
    is_null(Reference)
Mode and number of proofs:
    is_null(@term) - zero_or_one

---

is_object/1

True when the argument is a reference to a Java object. Fails if the argument is not instantiated.

Compilation flags:
    static

Template:
    is_object(Reference)
Mode and number of proofs:
    is_object(@term) - zero_or_one

---

terms_to_array/2

Converts a list of ground Prolog terms to an array (a Java reference).

Compilation flags:
 static

Template:
 terms_to_array(Terms,Array)
Mode and number of proofs:
 terms_to_array(++list(ground),-array) - one

---

array_to_terms/3

Converts an array (a Java reference) to a list of ground Prolog terms returning also its length. The array elements must be atoms, integers, floats, or compound terms. Fails otherwise.

Compilation flags:
 static

Template:
 array_to_terms(Array,Terms,Length)
Mode and number of proofs:
 array_to_terms(+array,-list(ground),-integer) - one

---

array_to_terms/2

Converts an array (a Java reference) to a list of ground Prolog terms. The array elements must be atoms, integers, floats, or ground compound terms. Fails otherwise.

Compilation flags:
 static

Template:
 array_to_terms(Array,Terms)
Mode and number of proofs:
 array_to_terms(+array,-list(term)) - one

---

array_to_list/2

Converts an array (a Java reference) to a list of Java references or their values.

Compilation flags:
    static

Template:
    array_to_list(Array,List)
Mode and number of proofs:
    array_to_list(+array,-list) - one

list_to_array/2

Converts a list of Java references or values to an array (a Java reference).

Compilation flags:
    static

Template:
    list_to_array(List,Array)
Mode and number of proofs:
    list_to_array(+list,-array) - one

array_list/2

Converts between an array (a Java reference) and a list of Java references or their values. Deprecated. Use the array_to_list/2 and list_to_array/2 predicates instead.

Compilation flags:
    static

Template:
    array_list(Array,List)

Mode and number of proofs:
    array_list(+array,-list) - one
    array_list(-array,+list) - one

---

iterator_element/2

Enumerates, by backtracking, all iterator elements.

Compilation flags:
    static

Template:
    iterator_element(Iterator,Element)
Mode and number of proofs:
    iterator_element(+iterator,-element) - zero_or_more

---

map_element/2

Enumerates, by backtracking, all map elements.

Compilation flags:
    static

Template:
    map_element(Map,Element)
Mode and number of proofs:
    map_element(+iterator,-element) - zero_or_more

---

set_element/2

Enumerates, by backtracking, all set elements.

Compilation flags:
    static

Template:
    set_element(Set,Element)
Mode and number of proofs:
    set_element(+iterator,-element) - zero_or_more

---

decode_exception/2

Decodes an exception into its corresponding cause. Fails if the exception is not a Java exception.

Compilation flags:
    static

Template:
    decode_exception(Exception,Cause)
Mode and number of proofs:
    decode_exception(+callable,-atom) - zero_or_one

---

decode_exception/3

Decodes an exception into its corresponding cause and a stack trace. Fails if the exception is not a Java exception.

Compilation flags:
    static

Template:
    decode_exception(Exception,Cause,StackTrace)
Mode and number of proofs:
    decode_exception(+callable,-atom,-list(atom)) - zero_or_one

Public predicates

parse/2

Parses the JSON contents read from the given source (codes(List), stream(Stream), line(Stream), file(Path), chars(List), or atom(Atom)) into a term. Fails if the JSON contents cannot be parsed.

Compilation flags:
    static

Template:
    parse(Source,Term)
Mode and number of proofs:
    parse(++compound,--term) - one_or_error

generate/2

Generates the content using the representation specified in the first argument (codes(List), stream(Stream), file(Path), chars(List), or atom(Atom)) for the term in the second argument. Fails if this term cannot be processed.

Compilation flags:
    static

Template:

protocol

1.42.3 lgtdocp

Documenting tool protocol.

Availability:
     logtalk_load(lgtdoc(loader))

Author: Paulo Moura
Version: 6:0:0
Date: 2024-03-08

Compilation flags:
     static

Dependencies:
     (none)

Remarks:

- Compiling files for generating XML documentation: All source files must be compiled with the source_data flag turned on.

- xml_spec(Specification) option: XML documenting files specification format. Possible option values are dtd (DTD specification; default) and xsd (XML Schema specification).

- xml_spec_reference(Reference) option: Reference to the XML specification file in XML documenting files. Possible values are local (default; DTD/XSD file in same folder as XML files), web (logtalk.org website DTD/XSD file), and standalone (no reference to specification files).

- entity_xsl_file(File) option: XSLT file to use with generated XML documenting files. Default is logtalk_entity_to_xml.xsl, allowing the XML files to be viewed by opening them with a browser supporting XSLT (after running the lgt2xml.sh script on the output directory).

- index_xsl_file(File) option: XSLT file to use with generated XML documenting files. Default is logtalk_index_to_xml.xsl, allowing the XML files to be viewed by opening them with a browser supporting XSLT (after running the lgt2xml.sh script on the output directory).

- xml_docs_directory(Directory) option: Directory where the XML documenting files will be generated. The default value is ./xml_docs, a sub-directory of the source files directory.

- bom(Boolean) option: Defines if a BOM should be added to the generated XML documenting files.

- encoding(Encoding) option: Encoding to be used for the generated XML documenting files.

- omit_path_prefixes(Prefixes) option: List of path prefixes (atoms) to omit when writing directory paths. The default value is to omit the home directory.

- exclude_files(List) option: List of files to exclude when generating the XML documenting files.

- exclude_paths(List) option: List of relative library paths to exclude when generating the XML documenting files (default is []). All sub-directories of the excluded directories are also excluded.

- exclude_prefixes(List) option: List of path prefixes to exclude when generating the XML documenting files (default is []).

- exclude_entities(List) option: List of entities to exclude when generating the XML documenting files (default is []).

- sort_predicates(Boolean) option: Sort entity predicates (default is false).

- Known issues: Some options may depend on the used XSL processor. Most XSL processors support DTDs but only some of them support XML Schemas. Some processors (e.g., fop2) reject reference to a DTD.

Public predicates

rlibraries/2

Creates XML documenting files for all entities in all given libraries and their sub-libraries using the specified options.

Compilation flags:
    static

Template:
    rlibraries(Libraries,Options)
Mode and number of proofs:
    rlibraries(+list(atom),+list) - one

rlibraries/1

Creates XML documenting files for all entities in all given libraries and their sub-libraries using default options.

Compilation flags:
      static

Template:
      rlibraries(Libraries)
Mode and number of proofs:
      rlibraries(+list(atom)) - one

rlibrary/2

Creates XML documenting files for all entities in a library and its sub-libraries using the specified options.

Compilation flags:
      static

Template:
      rlibrary(Library,Options)
Mode and number of proofs:
      rlibrary(+atom,+list) - one

Examples:
      Generate XML documenting files for all tool entities for later conversion to Markdown files
            rlibrary(tools,[xslfile('lgtmd.xsl')])
            yes

rlibrary/1

Creates XML documenting files for all entities in a library and its sub-libraries using default options.

Compilation flags:
    static

Template:
    rlibrary(Library)
Mode and number of proofs:
    rlibrary(+atom) - one

Examples:
    Generate XML documenting files for all tool entities for direct viewing in a browser (after indexing using the lgt2xml script)
        rlibrary(tools)
        yes

---

libraries/2

Creates XML documenting files for all entities in all given libraries using the specified options.

Compilation flags:
    static

Template:
    libraries(Libraries,Options)
Mode and number of proofs:
    libraries(+list(atom),+list) - one

---

libraries/1

Creates XML documenting files for all entities in all given libraries using default options.

Compilation flags:
    static

Template:
    libraries(Libraries)
Mode and number of proofs:
    libraries(+list(atom)) - one

---

library/2

Creates XML documenting files for all entities in a library using the specified options.

Compilation flags:
    static

Template:
    library(Library,Options)
Mode and number of proofs:
    library(+atom,+list) - one

Examples:
    Generate XML documenting files for all library entities for later conversion to PDF A4 files
        library(library,[xslfile('logtalk_entity_to_pdf_a4.xsl')])
        yes

---

library/1

Creates XML documenting files for all entities in a library using default options.

Compilation flags:
    static

Template:

 library(Library)

Mode and number of proofs:

 library(+atom) - one

---

rdirectories/2

Creates XML documenting files for all entities in all given directories and their sub-directories using the specified options.

Compilation flags:

 static

Template:

 rdirectories(Directories,Options)

Mode and number of proofs:

 rdirectories(+list(atom),+list) - one

---

rdirectories/1

Creates XML documenting files for all entities in all given directories and their sub-directories using default options.

Compilation flags:

 static

Template:

 rdirectories(Directories)

Mode and number of proofs:

 rdirectories(+list(atom)) - one

---

rdirectory/2

Creates XML documenting files for all entities in a directory and its sub-directories using the specified options.

Compilation flags:
> static

Template:
> rdirectory(Directory,Options)

Mode and number of proofs:
> rdirectory(+atom,+list) - one

Examples:
> Generate XML documenting files for all entities in the tools directory for later conversion to Markdown files
>> rdirectory('./tools',[xslfile('lgtmd.xsl')])
>> yes

rdirectory/1

Creates XML documenting files for all entities in a directory and its sub-directories using default options.

Compilation flags:
> static

Template:
> rdirectory(Directory)

Mode and number of proofs:
> rdirectory(+atom) - one

Examples:
> Generate XML documenting files for all entities in the tools directory for direct viewing in a browser (after indexing using the lgt2xml script)
>> rdirectory('./tools')
>> yes

directories/2

Creates XML documenting files for all entities in all given directories using the specified options.

Compilation flags:
    static

Template:
    directories(Directories,Options)
Mode and number of proofs:
    directories(+list(atom),+list) - one

---

directories/1

Creates XML documenting files for all entities in all given directories using default options.

Compilation flags:

Template:
    directories(Directories)
Mode and number of proofs:
    directories(+list(atom)) - one

---

directory/2

Creates XML documenting files for all entities in a directory using the specified options.

Compilation flags:
    static

Template:
    directory(Directory,Options)
Mode and number of proofs:
    directory(+atom,+list) - one

Examples:

Generate XML documenting files for all the entities in the current directory for later conversion to PDF A4 files

directory('.',[xslfile('logtalk_entity_to_pdf_a4.xsl')])

yes

---

directory/1

Creates XML documenting files for all entities in a directory using default options.

Compilation flags:

static

Template:

directory(Directory)

Mode and number of proofs:

directory(+atom) - one

---

files/2

Creates XML documenting files for all entities in loaded source files using the specified options. The files can be given by name, basename, full path, or using library notation.

Compilation flags:

static

Template:

files(Files,Options)

Mode and number of proofs:

files(+list(atom),+list) - one

---

files/1

Creates XML documenting files for all entities in loaded source files using default options. The files can be given by name, basename, full path, or using library notation.

Compilation flags:
    static

Template:

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

(no local declarations; see entity ancestors if any)

Operators

(none)

object

1.43.2 coverage_report

Intercepts unit test execution messages and generates a coverage_report.xml file with a test suite code coverage results.

Availability:
    logtalk_load(lgtunit(loader))

Author: Paulo Moura
Version: 3:2:0
Date: 2023-04-11

Compilation flags:
    static, context_switching_calls

Provides:
    logtalk::message_hook/4
Uses:

logtalk
user

Remarks:

- Usage: Simply load this object before running your tests using the goal logtalk_load(lgtunit(coverage_report)).

Inherited public predicates:
     (none)

- Private predicates
    - timestamp__/6
    - object_file__/2
- Operators

Public predicates

(no local declarations; see entity ancestors if any)

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

timestamp__/6

Cache of the starting tests timestamp.

Compilation flags:
     dynamic

Template:
     timestamp_(Year,Month,Day,Hours,Minutes,Seconds)
Mode and number of proofs:
     timestamp_(-integer,-integer,-integer,-integer,-integer,-integer) - one

object_file_/2

Cache of test object - file pairs.

Compilation flags:
    dynamic

Template:
    object_file_(Object,File)
Mode and number of proofs:
    object_file_(?object_identifier,?atom) - zero_or_more

Operators

(none)

object

1.43.3 lgtunit

A unit test framework supporting predicate clause coverage, determinism testing, input/output testing, property-based testing, and multiple test dialects.

Availability:
    logtalk_load(lgtunit(loader))

Author: Paulo Moura
Version: 20:0:0
Date: 2024-12-09

Compilation flags:
    static, context_switching_calls

Implements:
    public expanding
Provides:
    logtalk::trace_event/2
Uses:

fast_random
list
logtalk
os
type
user

Remarks:

- Usage: Define test objects as extensions of the lgtunit object and compile their source files using the compiler option hook(lgtunit).

- Portability: Deterministic unit tests are currently not available when using Quintus Prolog as the backend compiler.

- Known issues: Parameter variables cannot currently be used in the definition of test options.

Inherited public predicates:

Public predicates

cover/1

Declares entities being tested for which code coverage information should be collected.

Compilation flags:
    static

Template:
    cover(Entity)
Mode and number of proofs:
    cover(?entity_identifier) - zero_or_more

run/0

Runs the unit tests, writing the results to the current output stream.

Compilation flags:
    static

Mode and number of proofs:
    run - one

---

run/1

Runs a unit test or a list of unit tests, writing the results to the current output stream. Runs the global setup and cleanup steps when defined. Fails when given a partial list of tests or when one of the test identifiers is not valid.

Compilation flags:
    static

Template:
    run(Tests)
Mode and number of proofs:
    run(++callable) - zero_or_one
    run(++list(callable)) - zero_or_one

---

run/2

Runs the unit tests, writing the results to the specified file. Mode can be either write (to create a new file) or append (to add results to an existing file).

Compilation flags:
    static

Template:
    run(File,Mode)
Mode and number of proofs:
    run(+atom,+atom) - one

run_test_sets/1

Runs two or more test sets as a unified set generating a single code coverage report if one is requested. When there is a single test set, it is equivalent to sending the message run/0 to the test set. Trivially succeeds when the argument is an empty list.

Compilation flags:
    static

Template:
    run_test_sets(TestObjects)
Mode and number of proofs:
    run_test_sets(+list(object)) - one

Exceptions:
    TestObjects is a partial list or a list with an element which is a variable:
        instantiation_error
    TestObjects is neither a partial list nor a list:
        type_error(list(object),TestObjects)
    An element TestObject of the TestObjects list is not an existing object:
        existence_error(object,TestObject)

test/1

Enumerates, by backtracking, the identifiers of all defined unit tests.

Compilation flags:
    static

Template:
    test(Identifier)
Mode and number of proofs:
    test(?callable) - zero_or_more

number__of__tests/1

Number of defined unit tests.

Compilation flags:
    static

Template:
    number__of__tests(NumerOfTests)
Mode and number of proofs:
    number__of__tests(?integer) - zero__or__one

---

deterministic/1

True if the goal succeeds once without leaving choice-points.

Compilation flags:
    static

Template:
    deterministic(Goal)
Meta-predicate template:
    deterministic(0)
Mode and number of proofs:
    deterministic(+callable) - zero__or__one

---

deterministic/2

Reified version of the deterministic/1 predicate. True if the goal succeeds. Returns a boolean value (true or false) indicating if the goal succeeded without leaving choice-points.

Compilation flags:
    static

Template:
    deterministic(Goal,Deterministic)
Meta-predicate template:

deterministic(0,*)

Mode and number of proofs:

deterministic(+callable,--atom) - zero_or_one

---

assertion/1

True if the assertion goal succeeds. Throws an error using the assertion goal as argument if the assertion goal throws an error or fails.

Compilation flags:

static

Template:

assertion(Assertion)

Meta-predicate template:

assertion(::)

Mode and number of proofs:

assertion(@callable) - one

Exceptions:

Assertion goal fails:

assertion_failure(Assertion)

Assertion goal throws Error:

assertion_error(Assertion,Error)

---

assertion/2

True if the assertion goal succeeds. Throws an error using the description as argument if the assertion goal throws an error or fails. The description argument helps to distinguish between different assertions in the same test body.

Compilation flags:

static

Template:

assertion(Description,Assertion)

Meta-predicate template:

assertion(*,0)

Mode and number of proofs:
> assertion(+nonvar,@callable) - one

Exceptions:
> Assertion goal fails:
>> assertion_failure(Description)
> Assertion goal throws Error:
>> assertion_error(Description,Error)

---

quick_check/3

Reified version of the quick_check/2 predicate. Reports passed(SequenceSeed,Discarded,Labels), failed(Goal,SequenceSeed,TestSeed), error(Error,Goal,SequenceSeed,TestSeed), or broken(Why,Culprit). Goal is the failed test.

Compilation flags:
> static

Template:
> quick_check(Template,Result,Options)

Meta-predicate template:
> quick_check(::,*,::)

Mode and number of proofs:
> quick_check(@callable,-callable,++list(compound)) - one

Remarks:

- SequenceSeed argument: Can be used to re-run the same exact sequence of pseudo-random tests by using the rs/1 option after changes to the code being tested.

- TestSeed argument: Can be used to re-run the test that failed by using the rs/1 option after changes to the code being tested.

- Discarded argument: Number of generated tests that were discarded for failing to comply a precondition specified using the pc/1 option.

- Labels argument: List of pairs Label-N where N is the number of generated tests that are classified as Label by a closure specified using the l/1 option.

- broken(Why,Culprit) result: This result signals a broken setup. For example, an invalid template, a broken pre-condition or label goal, or broken test generation.

---

quick_check/2

Generates and runs random tests for a predicate given its mode template and a set of options. Fails when a generated test fails printing the test. Also fails on an invalid option, printing the option.

Compilation flags:
    static

Template:
    quick_check(Template,Options)
Meta-predicate template:
    quick_check(::,::)
Mode and number of proofs:
    quick_check(@callable,++list(compound)) - zero_or_one

Remarks:

- Number of tests: Use the n(NumberOfTests) option to specify the number of random tests. Default is 100.

- Maximum number of shrink operations: Use the s(MaxShrinks) option to specify the number of shrink operations when a counter example is found. Default is 64.

- Type edge cases: Use the ec(Boolean) option to specify if type edge cases are tested (before generating random tests). Default is true.

- Starting seed: Use the rs(Seed) option to specify the random generator starting seed to be used when generating tests. No default. Seeds should be regarded as opaque terms.

- Test generation filtering: Use the pc/1 option to specify a pre-condition closure for filtering generated tests (extended with the test arguments; no default).

- Generated tests classification: Use the l/1 option to specify a label closure for classifying the generated tests (extended with the test arguments plus the labels argument; no default). The labelling predicate can return a single test label or a list of test labels.

- Verbose test generation: Use the v(Boolean) option to specify verbose reporting of generated random tests. Default is false.

- Progress bar: Use the pb(Boolean,Tick) option to print a progress bar for the executed tests, advancing at every Tick tests. Default is false. Only applies when the verbose option is false.

quick_check/1

Generates and runs random tests using default options for a predicate given its mode template. Fails when a generated test fails printing the test.

Compilation flags:
    static

Template:
    quick_check(Template)
Mode and number of proofs:
    quick_check(@callable) - zero_or_one

---

benchmark/2

Benchmarks a goal and returns the total execution time in seconds. Uses CPU clock. Goals that may throw an exception should be wrapped by the catch/3 control construct.

Compilation flags:
    static

Template:
    benchmark(Goal,Time)
Meta-predicate template:
    benchmark(0,*)
Mode and number of proofs:
    benchmark(+callable,-float) - one

---

benchmark_reified/3

Benchmarks a goal and returns the total execution time in seconds plus its result (success, failure, or error(Error)). Uses CPU clock.

Compilation flags:
    static

Template:

benchmark__reified(Goal,Time,Result)

Meta-predicate template:

benchmark__reified(0,*,*)

Mode and number of proofs:

benchmark__reified(+callable,-float,-callable) - one

---

benchmark/3

Benchmarks a goal by repeating it the specified number of times and returning the total execution time in seconds. Uses CPU clock. Goals that may throw an exception should be wrapped by the catch/3 control construct.

Compilation flags:

static

Template:

benchmark(Goal,Repetitions,Time)

Meta-predicate template:

benchmark(0,*,*)

Mode and number of proofs:

benchmark(@callable,+positive_integer,-float) - one

---

benchmark/4

Benchmarks a goal by repeating it the specified number of times and returning the total execution time in seconds using the given clock (cpu or wall). Goals that may throw an exception should be wrapped by the catch/3 control construct.

Compilation flags:

static

Template:

benchmark(Goal,Repetitions,Clock,Time)

Meta-predicate template:

benchmark(0,*,*,*)

Mode and number of proofs:

benchmark(@callable,+positive_integer,+atom,-float) - one

---

variant/2

True when the two arguments are a variant of each other. I.e. if is possible to rename the term variables to make them identical. Useful for checking expected test results that contain variables.

Compilation flags:
    static

Template:
    variant(Term1,Term2)
Mode and number of proofs:
    variant(@term,@term) - zero_or_one

approximately_equal/2

Compares two numbers for approximate equality given the epsilon arithmetic constant value using the de facto standard formula abs(Number1 - Number2) =< max(abs(Number1), abs(Number2)) * epsilon. Type-checked.

Compilation flags:
    static

Template:
    approximately_equal(Number1,Number2)
Mode and number of proofs:
    approximately_equal(+number,+number) - zero_or_one

approximately_equal/3

Compares two numbers for approximate equality given a user-defined epsilon value using the de facto standard formula abs(Number1 - Number2) =< max(abs(Number1), abs(Number2)) * Epsilon. Type-checked.

Compilation flags:
    static

Template:
    approximately_equal(Number1,Number2,Epsilon)

Mode and number of proofs:
approximately_equal(+number,+number,+number) - zero_or_one

Remarks:

- Epsilon range: Epsilon should be the epsilon arithmetic constant value or a small multiple of it. Only use a larger value if a greater error is expected.

- Comparison with essential equality: For the same epsilon value, approximate equality is weaker requirement than essential equality.

---

essentially_equal/3

Compares two numbers for essential equality given an epsilon value using the de facto standard formula abs(Number1 - Number2) =< min(abs(Number1), abs(Number2)) * Epsilon. Type-checked.

Compilation flags:
static

Template:
essentially_equal(Number1,Number2,Epsilon)

Mode and number of proofs:
essentially_equal(+number,+number,+number) - zero_or_one

Remarks:

- Comparison with approximate equality: For the same epsilon value, essential equality is a stronger requirement than approximate equality.

---

tolerance_equal/4

Compares two numbers for close equality given relative and absolute tolerances using the de facto standard formula abs(Number1 - Number2) =< max(RelativeTolerance * max(abs(Number1), abs(Number2)), AbsoluteTolerance). Type-checked.

Compilation flags:
static

Template:
tolerance_equal(Number1,Number2,RelativeTolerance,AbsoluteTolerance)

Mode and number of proofs:

tolerance_equal(+number,+number,+number,+number) - zero_or_one

---

=~= / 2

Compares two numbers (or lists of numbers) for approximate equality using 100*epsilon for the absolute error and, if that fails, 99.999% accuracy for the relative error. But these precision values may not be adequate for all cases. Type-checked.

Compilation flags:
  static

Template:
  =~=(Number1,Number2)
Mode and number of proofs:
  =~=(+number,+number) - zero_or_one
  =~=(+list(number),+list(number)) - zero_or_one

---

epsilon/1

Returns the value of epsilon used in the definition of the (=~=)/2 predicate.

Compilation flags:
  static

Template:
  epsilon(Epsilon)
Mode and number of proofs:
  epsilon(-float) - one

Protected predicates

run_tests/0

Runs all defined unit tests.

Compilation flags:
    static

Mode and number of proofs:
    run_tests - one

---

run_tests/1

Runs all the tests defined in the given file.

Compilation flags:
    static

Template:
    run_tests(File)
Mode and number of proofs:
    run_tests(+atom) - one

---

run_test_set/0

Runs a test set as part of running two or more test sets as a unified set.

Compilation flags:
    static

Mode and number of proofs:
    run_test_set - one

---

run_quick_check_tests/5

Runs a QuickCheck test using the given options. Returns the starting seed used to generate the random tests, the number of discarded tests, and the test label statistics.

Compilation flags:
    static

Template:
    run_quick_check_tests(Template,Options,Seed,Discarded,Labels)
Meta-predicate template:
    run_quick_check_tests(::,::,*,*,*)
Mode and number of proofs:
    run_quick_check_tests(@callable,+list,--nonvar,--number,--list(pair)) - one_or_error

---

condition/0

Verifies conditions for running the tests. Defaults to the goal true.

Compilation flags:
    static

Mode and number of proofs:
    condition - zero_or_one

---

setup/0

Setup environment before running the test set. Defaults to the goal true.

Compilation flags:
    static

Mode and number of proofs:
    setup - zero_or_one

---

cleanup/0

Cleanup environment after running the test set. Defaults to the goal true.

Compilation flags:
    static

Mode and number of proofs:
    cleanup - zero_or_one

---

make/1

Make target for automatically running the test set when calling the logtalk_make/1 built-in predicate. No default. Possible values are all and check.

Compilation flags:
    static

Template:
    make(Target)
Mode and number of proofs:
    make(?atom) - zero_or_one

---

note/1

Note to be printed after the test results. Defaults to the empty atom.

Compilation flags:
    static

Template:
    note(Note)
Mode and number of proofs:
    note(?atom) - zero_or_one

---

file_path/2

Returns the absolute path for a file path that is relative to the tests object path. When the file path is already an absolute path, it is expanded to resolve any remaining relative file path parts.

Compilation flags:
    static

Template:
    file_path(File,Path)
Mode and number of proofs:
    file_path(+atom,-atom) - one

See also:
    clean_file/1
    clean_directory/1

---

suppress_text_output/0

Suppresses text output. Useful to avoid irrelevant text output from predicates being tested to clutter the test logs.

Compilation flags:
    static

Mode and number of proofs:
    suppress_text_output - one

---

suppress_binary_output/0

Suppresses binary output. Useful to avoid irrelevant binary output from predicates being tested to clutter the test logs.

Compilation flags:
    static

Mode and number of proofs:

suppress_binary_output - one

---

set_text_input/3

Creates a temporary file, in the same directory as the tests object, with the given text contents, and opens it for reading referenced by the given alias and using the additional options. If no eof_action/1 option is specified, its value will be the default used by the backend compiler.

Compilation flags:
    static

Template:
    set_text_input(Alias,Contents,Options)
Mode and number of proofs:
    set_text_input(+atom,+atom,+list(stream_option)) - one
    set_text_input(+atom,+list(atom),+list(stream_option)) - one

See also:
    text_input_assertion/3
    check_text_input/2
    clean_text_input/0

---

set_text_input/2

Creates a temporary file, in the same directory as the tests object, with the given text contents, and opens it for reading referenced by the given alias and using the default end-of-file action for the used backend compiler.

Compilation flags:
    static

Template:
    set_text_input(Alias,Contents)
Mode and number of proofs:
    set_text_input(+atom,+atom) - one
    set_text_input(+atom,+list(atom)) - one

See also:

text_input_assertion/3
check_text_input/2
clean_text_input/0

---

set_text_input/1

Creates a temporary file, in the same directory as the tests object, with the given text contents, opens it for reading using the default end-of-file action for the used backend compiler, and sets the current input stream to the file.

Compilation flags:
    static

Template:
    set_text_input(Contents)
Mode and number of proofs:
    set_text_input(+atom) - one
    set_text_input(+list(atom)) - one

See also:
    text_input_assertion/2
    check_text_input/1
    clean_text_input/0

---

check_text_input/2

Checks that the temporary file (referenced by the given alias) being read have the expected text contents.

Compilation flags:
    static

Template:
    check_text_input(Alias,Contents)
Mode and number of proofs:
    check_text_input(+atom,+atom) - zero_or_one

See also:

---

set_text_input/2
set_text_input/2
text_input_assertion/3
clean_text_input/0

---

check_text_input/1

Checks that the temporary file being read have the expected text contents.

Compilation flags:
    static

Template:
    check_text_input(Contents)
Mode and number of proofs:
    check_text_input(+atom) - zero_or_one

See also:
    set_text_input/1
    text_input_assertion/2
    clean_text_input/0

---

text_input_assertion/3

Returns an assertion for checking that the temporary file (referenced by the given alias) being read have the expected text contents.

Compilation flags:
    static

Template:
    text_input_assertion(Alias,Contents,Assertion)
Mode and number of proofs:
    text_input_assertion(+atom,+atom,--callable) - one

See also:
    set_text_input/3

check_text_input/2
clean_text_input/0

---

text_input_assertion/2

Returns an assertion for checking that the temporary file being read have the expected text contents.

Compilation flags:
    static

Template:
    text_input_assertion(Contents,Assertion)
Mode and number of proofs:
    text_input_assertion(+atom,--callable) - one

See also:
    set_text_input/1
    check_text_input/1
    clean_text_input/0

---

clean_text_input/0

Cleans the temporary file used when testing text input.

Compilation flags:
    static

Mode and number of proofs:
    clean_text_input - one

See also:
    set_text_input/3
    set_text_input/2
    set_text_input/1

---

set__binary__input/3

Creates a temporary file, in the same directory as the tests object, with the given binary contents, and opens it for reading referenced by the given alias and using the additional options. If no eof_action/1 option is specified, its value will be the default used by the backend compiler.

Compilation flags:
    static

Template:
    set_binary_input(Alias,Bytes,Options)
Mode and number of proofs:
    set_binary_input(+atom,+list(byte),+list(stream_option)) - one

See also:
    binary_input_assertion/3
    check_binary_input/2
    clean_binary_input/0

set__binary__input/2

Creates a temporary file, in the same directory as the tests object, with the given binary contents, and opens it for reading referenced by the given alias and using the default end-of-file action for the used backend compiler.

Compilation flags:
    static

Template:
    set_binary_input(Alias,Bytes)
Mode and number of proofs:
    set_binary_input(+atom,+list(byte)) - one

See also:
    binary_input_assertion/3
    check_binary_input/2
    clean_binary_input/0

set_binary_input/1

Creates a temporary file, in the same directory as the tests object, with the given binary contents, and opens it for reading using the default end-of-file action for the used backend compiler, and sets the current input stream to the file.

Compilation flags:
    static

Template:
    set_binary_input(Bytes)
Mode and number of proofs:
    set_binary_input(+list(byte)) - one

See also:
    binary_input_assertion/2
    check_binary_input/1
    clean_binary_input/0

---

check_binary_input/2

Checks that the temporary file (referenced by the given alias) being read have the expected binary contents.

Compilation flags:
    static

Template:
    check_binary_input(Alias,Bytes)
Mode and number of proofs:
    check_binary_input(+atom,+list(byte)) - zero_or_one

See also:
    set_binary_input/3
    set_binary_input/2
    binary_input_assertion/3
    clean_binary_input/0

---

check_binary_input/1

Checks that the temporary file being read have the expected binary contents.

Compilation flags:
    static

Template:
    check_binary_input(Bytes)
Mode and number of proofs:
    check_binary_input(+list(byte)) - zero_or_one

See also:
    binary_input_assertion/2
    set_binary_input/1
    clean_binary_input/0

---

binary_input_assertion/3

Returns an assertion for checking that the temporary file (referenced by the given alias) being read have the expected binary contents.

Compilation flags:
    static

Template:
    binary_input_assertion(Alias,Bytes,Assertion)
Mode and number of proofs:
    binary_input_assertion(+atom,+list(byte),--callable) - one

See also:
    check_binary_input/2
    set_binary_input/3
    set_binary_input/2
    clean_binary_input/0

binary_input_assertion/2

Returns an assertion for checking that the temporary file being read have the expected binary contents.

Compilation flags:
    static

Template:
    binary_input_assertion(Bytes,Assertion)
Mode and number of proofs:
    binary_input_assertion(+list(byte),--callable) - one

See also:
    check_binary_input/1
    set_binary_input/1
    clean_binary_input/0

---

clean_binary_input/0

Cleans the temporary file used when testing binary input.

Compilation flags:
    static

Mode and number of proofs:
    clean_binary_input - one

See also:
    set_binary_input/3
    set_binary_input/2
    set_binary_input/1

---

set_text_output/3

Creates a temporary file, in the same directory as the tests object, with the given text contents, and opens it for writing referenced by the given alias and using the additional options.

Compilation flags:
      static

Template:
      set_text_output(Alias,Contents,Options)
Mode and number of proofs:
      set_text_output(+atom,+atom,+list(stream_option)) - one
      set_text_output(+atom,+list(atom),+list(stream_option)) - one

See also:
      text_output_assertion/4
      check_text_output/3
      clean_text_output/0

set_text_output/2

Creates a temporary file, in the same directory as the tests object, with the given text contents, and referenced by the given alias.

Compilation flags:
      static

Template:
      set_text_output(Alias,Contents)
Mode and number of proofs:
      set_text_output(+atom,+atom) - one
      set_text_output(+atom,+list(atom)) - one

See also:
      text_output_assertion/3
      check_text_output/2
      clean_text_output/0

set_text_output/1

Creates a temporary file, in the same directory as the tests object, with the given text contents, and sets the current output stream to the file.

Compilation flags:
    static

Template:
    set_text_output(Contents)
Mode and number of proofs:
    set_text_output(+atom) - one
    set_text_output(+list(atom)) - one

See also:
    text_output_assertion/2
    check_text_output/1
    clean_text_output/0

check_text_output/3

Checks that the temporary file (open with the given options and alias in the same directory as the tests object) being written have the expected text contents.

Compilation flags:
    static

Template:
    check_text_output(Alias,Contents,Options)
Mode and number of proofs:
    check_text_output(+atom,+atom,+list(stream_option)) - zero_or_one

See also:
    set_text_output/3
    text_output_assertion/4
    clean_text_output/0

check_text_output/2

Checks that the temporary file (open with default options and alias in the same directory as the tests object) being written have the expected text contents.

Compilation flags:
    static

Template:
    check_text_output(Alias,Contents)
Mode and number of proofs:
    check_text_output(+atom,+atom) - zero_or_one

See also:
    set_text_output/2
    text_output_assertion/3
    clean_text_output/0

---

check_text_output/1

Checks that the temporary file being written have the expected text contents.

Compilation flags:
    static

Template:
    check_text_output(Contents)
Mode and number of proofs:
    check_text_output(+atom) - zero_or_one

See also:
    set_text_output/1
    text_output_assertion/2
    clean_text_output/0

---

text_output_assertion/4

Returns an assertion for checking that the temporary file (open with the given options and alias in the same directory as the tests object) being written have the expected text contents.

Compilation flags:
    static

Template:
    text_output_assertion(Alias,Contents,Options,Assertion)
Mode and number of proofs:
    text_output_assertion(+atom,+atom,+list(stream_option),--callable) - one

See also:
    set_text_output/3
    check_text_output/3
    clean_text_output/0

---

text_output_assertion/3

Returns an assertion for checking that the temporary file (open with default options and alias in the same directory as the tests object) being written have the expected text contents.

Compilation flags:
    static

Template:
    text_output_assertion(Alias,Contents,Assertion)
Mode and number of proofs:
    text_output_assertion(+atom,+atom,--callable) - one

See also:
    set_text_output/2
    check_text_output/2
    clean_text_output/0

text_output_assertion/2

Returns an assertion for checking that the temporary file (open with default options in the same directory as the tests object) being written have the expected text contents.

Compilation flags:
    static

Template:
    text_output_assertion(Contents,Assertion)
Mode and number of proofs:
    text_output_assertion(+atom,--callable) - one

See also:
    set_text_output/1
    check_text_output/1
    clean_text_output/0

text_output_contents/3

Returns the contents of the temporary file (open with the given options and alias in the same directory as the tests object) being written.

Compilation flags:
    static

Template:
    text_output_contents(Alias,Contents,Options)
Mode and number of proofs:
    text_output_contents(+atom,-list(character),+list(stream_option)) - one

text_output_contents/2

Returns the contents of the temporary file (open with default options and alias in the same directory as the tests object) being written.

Compilation flags:
    static

Template:
    text_output_contents(Alias,Contents)
Mode and number of proofs:
    text_output_contents(+atom,-list(character)) - one

---

text_output_contents/1

Returns the contents of the temporary file (open with default options in the same directory as the tests object) being written.

Compilation flags:
    static

Template:
    text_output_contents(Contents)
Mode and number of proofs:
    text_output_contents(-list(character)) - one

---

clean_text_output/0

Cleans the temporary file used when testing text output.

Compilation flags:
    static

Mode and number of proofs:
    clean_text_output - one

See also:

---

set_binary_output/3

Creates a temporary file, in the same directory as the tests object, with the given binary contents, and opens it for writing referenced by the given alias and using the additional options.

Compilation flags:
    static

Template:
    set_binary_output(Alias,Contents,Options)
Mode and number of proofs:
    set_binary_output(+atom,+list(byte),+list(stream_option)) - one

See also:
    binary_output_assertion/3
    check_binary_output/2
    clean_binary_output/0

---

set_binary_output/2

Creates a temporary file, in the same directory as the tests object, with the given binary contents, and opens it for writing referenced with the given alias.

Compilation flags:
    static

Template:
    set_binary_output(Alias,Bytes)
Mode and number of proofs:
    set_binary_output(+atom,+list(byte)) - one

See also:
    binary_output_assertion/3

check_binary_output/2
clean_binary_output/0

---

set_binary_output/1

Creates a temporary file, in the same directory as the tests object, with the given binary contents, and sets the current output stream to the file.

Compilation flags:
    static

Template:
    set_binary_output(Bytes)
Mode and number of proofs:
    set_binary_output(+list(byte)) - one

See also:
    binary_output_assertion/2
    check_binary_output/1
    clean_binary_output/0

---

check_binary_output/2

Checks that the temporary file (referenced by the given alias) have the expected binary contents.

Compilation flags:
    static

Template:
    check_binary_output(Alias,Bytes)
Mode and number of proofs:
    check_binary_output(+atom,+list(byte)) - zero_or_one

See also:
    set_binary_output/3
    set_binary_output/2
    binary_output_assertion/3

clean_binary_output/0

---

check_binary_output/1

Checks that the temporary file (open in the same directory as the tests object) have the expected binary contents.

Compilation flags:
     static

Template:
     check_binary_output(Bytes)
Mode and number of proofs:
     check_binary_output(+list(byte)) - zero_or_one

See also:
     set_binary_output/1
     binary_output_assertion/2
     clean_binary_output/0

---

binary_output_assertion/3

Returns an assertion for checking that the temporary file (referenced by the given alias) have the expected binary contents.

Compilation flags:
     static

Template:
     binary_output_assertion(Alias,Bytes,Assertion)
Mode and number of proofs:
     binary_output_assertion(+atom,+list(byte),--callable) - one

See also:
     set_binary_output/2
     check_binary_output/2
     clean_binary_output/0

binary_output_assertion/2

Returns an assertion for checking that the temporary file (open in the same directory as the tests object) have the expected binary contents.

Compilation flags:
    static

Template:
    binary_output_assertion(Bytes,Assertion)
Mode and number of proofs:
    binary_output_assertion(+list(byte),--callable) - one

See also:
    set_binary_output/1
    check_binary_output/1
    clean_binary_output/0

binary_output_contents/2

Returns the binary contents of the temporary file (referenced by the given alias) being written.

Compilation flags:
    static

Template:
    binary_output_contents(Alias,Bytes)
Mode and number of proofs:
    binary_output_contents(+atom,-list(byte)) - one

binary_output_contents/1

Returns the binary contents of the temporary file being written.

Compilation flags:
    static

Template:
    binary_output_contents(Bytes)
Mode and number of proofs:
    binary_output_contents(-list(byte)) - one

---

clean_binary_output/0

Cleans the temporary file used when testing binary output.

Compilation flags:
    static

Mode and number of proofs:
    clean_binary_output - one

See also:
    set_binary_output/3
    set_binary_output/2
    set_binary_output/1

---

create_text_file/3

Creates a text file with the given contents. The file is open for writing using the given options. Relative file paths are interpreted as relative to the tests object path.

Compilation flags:
    static

Template:

create_text_file(File,Contents,Options)
Mode and number of proofs:
    create_text_file(+atom,+atom,+list(stream_option)) - one
    create_text_file(+atom,+list(atom),+list(stream_option)) - one

---

create_text_file/2

Creates a text file with the given contents. The file is open for writing using default options. Relative file paths are interpreted as relative to the tests object path.

Compilation flags:
    static

Template:
    create_text_file(File,Contents)
Mode and number of proofs:
    create_text_file(+atom,+atom) - one
    create_text_file(+atom,+list(atom)) - one

---

create_binary_file/2

Creates a binary file with the given contents. Relative file paths are interpreted as relative to the tests object path.

Compilation flags:
    static

Template:
    create_binary_file(File,Bytes)
Mode and number of proofs:
    create_binary_file(+atom,+list(byte)) - one

---

check_text_file/3

Checks that the contents of a text file match the expected contents. The file is open for reading using the given options. Relative file paths are interpreted as relative to the tests object path.

Compilation flags:
    static

Template:
    check_text_file(File,Contents,Options)
Mode and number of proofs:
    check_text_file(+atom,+atom,+list(stream_option)) - zero_or_one

See also:
    text_file_assertion/4

---

check_text_file/2

Checks that the contents of a text file (open for reading using default options) match the expected contents. Relative file paths are interpreted as relative to the tests object path.

Compilation flags:
    static

Template:
    check_text_file(File,Contents)
Mode and number of proofs:
    check_text_file(+atom,+atom) - zero_or_one

See also:
    text_file_assertion/3

---

text__file__assertion/4

Returns an assertion for checking that the given file have the expected text contents. The file is open for reading using the given options. Relative file paths are interpreted as relative to the tests object path.

Compilation flags:
     static

Template:
     text__file__assertion(File,Contents,Options,Assertion)
Mode and number of proofs:
     text__file__assertion(+atom,+atom,+list(stream__option),--callable) - one

See also:
     check__text__file/3

---

text__file__assertion/3

Returns an assertion for checking that the given file have the expected text contents. The file is open for reading using default options. Relative file paths are interpreted as relative to the tests object path.

Compilation flags:
     static

Template:
     text__file__assertion(File,Contents,Assertion)
Mode and number of proofs:
     text__file__assertion(+atom,+atom,--callable) - one

See also:
     check__text__file/2

---

check_binary_file/2

Checks the contents of a binary file match the expected contents. Relative file paths are interpreted as relative to the tests object path.

Compilation flags:
    static

Template:
    check_binary_file(File,Bytes)
Mode and number of proofs:
    check_binary_file(+atom,+list(byte)) - zero_or_one

See also:
    binary_file_assertion/3

---

binary_file_assertion/3

Returns an assertion for checking that the given file have the expected binary contents. Relative file paths are interpreted as relative to the tests object path.

Compilation flags:
    static

Template:
    binary_file_assertion(File,Bytes,Assertion)
Mode and number of proofs:
    binary_file_assertion(+atom,+list(byte),--callable) - one

See also:
    check_binary_file/2

---

clean_file/1

Closes any existing stream associated with the file and deletes the file if it exists. Relative file paths are interpreted as relative to the tests object path.

Compilation flags:
    static

Template:
    clean_file(File)
Mode and number of proofs:
    clean_file(+atom) - one

See also:
    clean_directory/1
    file_path/2

---

clean_directory/1

Deletes an empty directory if it exists. Relative directory paths are interpreted as relative to the tests object path.

Compilation flags:
    static

Template:
    clean_directory(Directory)
Mode and number of proofs:
    clean_directory(+atom) - one

See also:
    clean_file/1
    file_path/2

---

closed_input_stream/2

Opens a temporary file in the same directory as the tests object with the given options for reading, closes it, and returns its stream handle.

Compilation flags:
    static

Template:
    closed_input_stream(Stream,Options)
Mode and number of proofs:
    closed_input_stream(-stream,+list(stream_option)) - one

---

closed_output_stream/2

Opens a temporary file in the same directory as the tests object with the given options for writing, closes it, and returns its stream handle.

Compilation flags:
    static

Template:
    closed_output_stream(Stream,Options)
Mode and number of proofs:
    closed_output_stream(-stream,+list(stream_option)) - zero_or_one

---

stream_position/1

Returns a syntactically valid stream position by opening a temporary file in the same directory as the tests object.

Compilation flags:
    static

Template:
    stream_position(Position)
Mode and number of proofs:

stream_position(-stream_position) - one

---

test/2

Table of defined tests.

Compilation flags:
     static

Template:
     test(Identifier,Test)
Mode and number of proofs:
     test(?callable,?compound) - zero_or_more

Private predicates

running_test_sets_/0

Internal flag used when running two or more test sets as a unified set.

Compilation flags:
     dynamic

Mode and number of proofs:
     running_test_sets_ - zero_or_one

---

test/3

Compiled unit tests. The list of variables is used to ensure variable sharing between a test with its test options.

Compilation flags:
     static

Template:
    test(Identifier,Variables,Outcome)
Mode and number of proofs:
    test(?callable,?list(variable),?nonvar) - zero_or_more

---

auxiliary_predicate_counter_/1

Counter for generating unique auxiliary predicate names.

Compilation flags:
    dynamic

Template:
    auxiliary_predicate_counter_(Counter)
Mode and number of proofs:
    auxiliary_predicate_counter_(?integer) - one_or_more

---

test_/2

Table of compiled tests.

Compilation flags:
    dynamic

Template:
    test_(Identifier,Test)
Mode and number of proofs:
    test_(?callable,?compound) - zero_or_more

---

selected_test_/1

Table of selected tests for execution.

Compilation flags:
    dynamic

Template:
    selected_test_(Identifier)
Mode and number of proofs:
    selected_test_(?callable) - zero_or_more

---

skipped_/1

Counter for skipped tests.

Compilation flags:
    dynamic

Template:
    skipped_(Counter)
Mode and number of proofs:
    skipped_(?integer) - zero_or_one

---

passed_/3

Counter and total time for passed tests.

Compilation flags:
    dynamic

Template:
    passed_(Counter,CPUTime,WallTime)
Mode and number of proofs:
    passed_(?integer,-float,-float) - zero_or_one

---

failed__/3

Counter and total time for failed tests.

Compilation flags:
    dynamic

Template:
    failed__(Counter,CPUTime,WallTime)
Mode and number of proofs:
    failed__(?integer,-float,-float) - zero_or_one

---

flaky__/1

Counter for failed tests that are marked as flaky.

Compilation flags:
    dynamic

Template:
    flaky__(Counter)
Mode and number of proofs:
    flaky__(?integer) - zero_or_one

---

fired__/3

Fired clauses when running the unit tests.

Compilation flags:
    dynamic

Template:
    fired__(Entity,Predicate,Clause)
Mode and number of proofs:
    fired__(?entity_identifier,?predicate_indicator,?integer) - zero_or_more

---

covered__/4

Auxiliary predicate for collecting statistics on clause coverage.

Compilation flags:
    dynamic

Template:
    covered_(Entity,Predicate,Covered,Total)
Mode and number of proofs:
    covered_(?entity_identifier,?callable,?integer,?integer) - zero_or_more

---

    - decrement_counter/1
    - reset_counter/1
    - reset_counters/0
- Protected predicates
- Private predicates
    - counter_/2
- Operators

Public predicates

counter/2

True if Counter is a counter with value Value.

Compilation flags:
>   static

Template:
>   counter(Counter,Value)

Mode and number of proofs:
>   counter(?nonvar,?integer) - zero_or_more

---

increment_counter/1

Increments the named counter.

Compilation flags:
    static

Template:
    increment_counter(Counter)
Mode and number of proofs:
    increment_counter(+nonvar) - one

---

decrement_counter/1

Decrements the named counter.

Compilation flags:
    static

Template:
    decrement_counter(Counter)
Mode and number of proofs:
    decrement_counter(+nonvar) - one

---

reset_counter/1

Resets the named counter to zero. Creates the counter if it does not exist.

Compilation flags:
    static

Template:
    reset_counter(Counter)
Mode and number of proofs:
    reset_counter(+nonvar) - one

---

reset_counters/0

Resets all existing named counters to zero.

Compilation flags:
    static

Mode and number of proofs:
    reset_counters - one

Protected predicates

(none)

Private predicates

counter_/2

Table of named counters.

Compilation flags:
    dynamic

Template:
    counter_(Counter,Value)
Mode and number of proofs:
    counter_(?nonvar,?integer) - zero_or_more

Operators

(none)

object

1.44.3 streamvars

Stream variables (supporting logical, backtracable, adding and retrieving of terms).

Availability:
     logtalk_load(library(loader))

Author: Nobukuni Kino and Paulo Moura
Version: 1:3:0
Date: 2019-06-15

Compilation flags:
     static, context_switching_calls

Dependencies:
     (none)

Remarks:
     (none)

Inherited public predicates:
     (none)

- Public predicates
    - new/1
    - new/2

    - (=>)/2
- Protected predicates
- Private predicates
- Operators
    - op(100,xfx,<=)
    - op(100,xfx,=>)

Public predicates

new/1

Makes Variable a stream variable. Initial state will be empty.

Compilation flags:
    static

Template:
    new(Variable)
Mode and number of proofs:
    new(--streamvar) - one

Exceptions:
    Variable is not a variable:
        type_error(variable,Variable)

---

new/2

Makes Variable a stream variable and sets its initial state to Value.

Compilation flags:
    static

Template:
    new(Variable,Value)
Mode and number of proofs:
    new(--streamvar,@nonvar) - one

Exceptions:
    Variable is not a variable:
        type_error(variable,Variable)

(<=)/2

Sets the state of the stream variable Variable to Value (initializing the variable if needed).

Compilation flags:
    static

Template:
    Variable<=Value
Mode and number of proofs:
    (?streamvar)<=(@nonvar) - one

(=>)/2

Unifies Value with the current state of the stream variable Variable.

Compilation flags:
    static

Template:
    Variable=>Value
Mode and number of proofs:
    +streamvar=> ?nonvar - zero_or_one

Protected predicates

1.45 listing

category

1.45.1 listing

Listing predicates.

Availability:
    logtalk_load(listing(loader))

Author: Paulo Moura
Version: 1:0:0
Date: 2024-01-26

Compilation flags:
    static

Dependencies:
    (none)

Remarks:
    (none)

Inherited public predicates:
    (none)

- Public predicates
    - listing/0
    - listing/1
    - portray_clause/1
- Protected predicates
- Private predicates
- Operators

Public predicates

listing/0

Lists all clauses of all visible dynamic predicates to the current output stream.

Compilation flags:
    static

Mode and number of proofs:
    listing - one

listing/1

Lists all clauses of a visible dynamic predicate or non-terminal to the current output stream. When the argument is a clause head, lists all matching clauses.

Compilation flags:
    static

Template:
    listing(Spec)
Mode and number of proofs:
    listing(+predicate_indicator) - one_or_error
    listing(+non_terminal_indicator) - one_or_error
    listing(+callable) - one_or_error

Exceptions:
    Spec is not ground:

instantiation_error

Spec is ground but not a valid predicate indicator:

type_error(predicate_indicator,Spec)

Spec is ground but not a valid non-terminal indicator:

type_error(non_terminal_indicator,Spec)

Spec is a predicate indicator but not a visible predicate:

existence_error(predicate,Spec)

Spec is a non-terminal indicator but not a visible non-terminal:

existence_error(non_terminal,Spec)

Spec is a callable term with a Functor/Arity indicator but not a visible predicate:

existence_error(predicate,Functor/Arity)

Spec is a predicate indicator of a visible predicate but not a dynamic predicate:

permission_error(access,predicate,Spec)

Spec is a non-terminal indicator of a visible non-terminal but not a dynamic non-terminal:

permission_error(access,non_terminal,Spec)

Spec is a callable term for a visible predicate with a Functor/Arity indicator but not a dynamic predicate:

permission_error(access,predicate,Functor/Arity)

---

portray_clause/1

Pretty prints a clause to the current output stream.

Compilation flags:

static

Template:

portray_clause(Clause)

Mode and number of proofs:

portray_clause(+clause) - one

Protected predicates

(none)

Private predicates

(none)

Public predicates

log_file/2

Access to the table of log files.

Compilation flags:
     static

Template:
     log_file(Alias,File)
Mode and number of proofs:
     log_file(?atom,?atom) - zero_or_more

---

define_log_file/2

Defines a log file with alias Alias and file name File. If the log file already exists, its contents are kept. Logging is enabled by default.

Compilation flags:
     static

Template:
     define_log_file(Alias,File)
Mode and number of proofs:
     define_log_file(+atom,+atom) - one

---

init_log_file/2

Initializes a new log file with alias Alias and file name File. If the log file already exists, its contents are erased. Logging is enabled by default.

Compilation flags:
    static

Template:
    init_log_file(Alias,File)
Mode and number of proofs:
    init_log_file(+atom,+atom) - one

---

log_event/2

Logs an event Event to a log file with alias Alias. Fails if a log file with alias Alias is not defined.

Compilation flags:
    static

Template:
    log_event(Alias,Event)
Mode and number of proofs:
    log_event(+atom,+nonvar) - zero_or_one

---

logging/1

True if logging to file with alias Alias is enabled.

Compilation flags:
    static

Template:
    logging(Alias)
Mode and number of proofs:
    logging(+atom) - zero_or_one

enable_logging/1

Enables logging to file with alias Alias. Fails if a log file with alias Alias is not defined.

Compilation flags:
    static

Template:
    enable_logging(Alias)
Mode and number of proofs:
    enable_logging(+atom) - zero_or_one

disable_logging/1

Disables logging to file with alias Alias. Fails if a log file with alias Alias is not defined.

Compilation flags:
    static

Template:
    disable_logging(Alias)
Mode and number of proofs:
    disable_logging(+atom) - zero_or_one

Public predicates

whiledo/2

While Condition is true do Action.

Compilation flags:
  static

Template:
  whiledo(Condition,Action)
Meta-predicate template:
  whiledo(0,0)
Mode and number of proofs:
  whiledo(+callable,@callable) - zero_or_one

dowhile/2

Do Action while Condition is true.

Compilation flags:
    static

Template:
    dowhile(Action,Condition)
Meta-predicate template:
    dowhile(0,0)
Mode and number of proofs:
    dowhile(@callable,+callable) - zero_or_one

---

foreach/3

For each Element in List call Goal.

Compilation flags:
    static

Template:
    foreach(Element,List,Goal)
Meta-predicate template:
    foreach(*,*,0)
Mode and number of proofs:
    foreach(@var,+list(term),@callable) - zero_or_one

---

foreach/4

For each Element in List at position Index call Goal. Index starts at 1.

Compilation flags:
    static

Template:
    foreach(Element,Index,List,Goal)

Meta-predicate template:
  foreach(*,*,*,0)
Mode and number of proofs:
  foreach(@var,@var,+list(term),@callable) - zero_or_one

---

forto/3

Calls Goal counting up from First to Last. Increment is 1. For convenience, First and Last can be arithmetic expressions. Fails iff Goal fails.

Compilation flags:
  static

Template:
  forto(First,Last,Goal)
Meta-predicate template:
  forto(*,*,0)
Mode and number of proofs:
  forto(+number,+number,@callable) - zero_or_one

---

forto/4

Calls Goal counting up from First to Last and binding Count to each successive value. Increment is 1. For convenience, First and Last can be arithmetic expressions. Fails iff Goal fails.

Compilation flags:
  static

Template:
  forto(Count,First,Last,Goal)
Meta-predicate template:
  forto(*,*,*,0)
Mode and number of proofs:
  forto(@var,+number,+number,@callable) - zero_or_one

---

forto/5

Calls Goal counting up from First to Last and binding Count to each successive value. For convenience, First, Last, and Increment can be arithmetic expressions (uses Increment absolute value). Fails iff Goal fails.

Compilation flags:
    static

Template:
    forto(Count,First,Last,Increment,Goal)
Meta-predicate template:
    forto(*,*,*,*,0)
Mode and number of proofs:
    forto(@var,+number,+number,+number,@callable) - zero_or_one

---

fordownto/3

Calls Goal counting down from First to Last. Decrement is 1. For convenience, First and Last can be arithmetic expressions. Fails iff Goal fails.

Compilation flags:
    static

Template:
    fordownto(First,Last,Goal)
Meta-predicate template:
    fordownto(*,*,0)
Mode and number of proofs:
    fordownto(+number,+number,@callable) - zero_or_one

---

fordownto/4

Calls Goal counting down from First to Last and binding Count to each successive value. Decrement is 1. For convenience, First and Last can be arithmetic expressions. Fails iff Goal fails.

Compilation flags:
    static

Template:

    fordownto(Count,First,Last,Goal)

Meta-predicate template:

    fordownto(*,*,*,0)

Mode and number of proofs:

    fordownto(@var,+number,+number,@callable) - zero_or_one

---

fordownto/5

Calls Goal counting down from First to Last and binding Count to each successive value. For convenience, First, Last, and Decrement can be arithmetic expressions (uses Decrement absolute value). Fails iff Goal fails.

Compilation flags:

    static

Template:

    fordownto(Count,First,Last,Decrement,Goal)

Meta-predicate template:

    fordownto(*,*,*,*,0)

Mode and number of proofs:

    fordownto(@var,+number,+number,+number,@callable) - zero_or_one

---

Public predicates

include/3

Returns a list of all list elements that satisfy a predicate.

Compilation flags:
  static

Template:
  include(Closure,List,Included)
Meta-predicate template:
  include(1,*,*)
Mode and number of proofs:
  include(+callable,+list,-list) - one

exclude/3

Returns a list of all list elements that fail to satisfy a predicate.

Compilation flags:
  static

Template:
  exclude(Closure,List,Excluded)
Meta-predicate template:
  exclude(1,*,*)
Mode and number of proofs:
  exclude(+callable,+list,-list) - one

findall_member/4

Finds all members of a list that satisfy a given test.

Compilation flags:
    static

Template:
    findall_member(Member,List,Test,Result)
Meta-predicate template:
    findall_member(*,*,0,*)
Mode and number of proofs:
    findall_member(@term,+list,@callable,-list) - one

---

findall_member/5

Finds all members of a list that satisfy a given test appending the given tail to the result.

Compilation flags:
    static

Template:
    findall_member(Member,List,Test,Result,Tail)
Meta-predicate template:
    findall_member(*,*,0,*,*)
Mode and number of proofs:
    findall_member(@term,+list,@callable,-list,+list) - one

---

partition/4

Partition a list of elements in two lists using a predicate.

Compilation flags:
    static

Template:
    partition(Closure,List,Included,Excluded)

Meta-predicate template:
    partition(1,*,*,*)
Mode and number of proofs:
    partition(+callable,+list,-list,-list) - one

---

partition/6

Partitions a list in lists with values less, equal, and greater than a given value using a comparison predicate with the same argument order as compare/3.

Compilation flags:
    static

Template:
    partition(Closure,List,Value,Less,Equal,Greater)
Meta-predicate template:
    partition(3,*,*,*,*,*)
Mode and number of proofs:
    partition(+callable,+list,@term,-list,-list,-list) - one

---

fold_left/4

List folding (left associative). Closure is extended with three arguments: accumulator, list element, and updated accumulator.

Compilation flags:
    static

Template:
    fold_left(Closure,Accumulator,List,Result)
Meta-predicate template:
    fold_left(3,*,*,*)
Mode and number of proofs:
    fold_left(+callable,?term,+list,?term) - zero_or_more

---

fold_left_1/3

List folding (left associative). Closure is extended with three arguments: accumulator, list element, and updated accumulator. The initial value of the accumulator is the list first element. Fails for empty lists.

Compilation flags:
    static

Template:
    fold_left_1(Closure,List,Result)
Meta-predicate template:
    fold_left_1(3,*,*)
Mode and number of proofs:
    fold_left_1(+callable,+list,?term) - zero_or_more

---

scan_left/4

List scanning (left associative). Closure is extended with three arguments: accumulator, list element, and updated accumulator.

Compilation flags:
    static

Template:
    scan_left(Closure,Accumulator,List,Results)
Meta-predicate template:
    scan_left(3,*,*,*)
Mode and number of proofs:
    scan_left(+callable,?term,+list,?list) - zero_or_more

---

scan_left_1/3

List scanning (left associative). Closure is extended with three arguments: accumulator, list element, and updated accumulator. The accumulator is initialized with the list first element. Fails for empty lists.

Compilation flags:
    static

Template:

     scan__left__1(Closure,List,Results)

Meta-predicate template:

     scan__left__1(3,*,*)

Mode and number of proofs:

     scan__left__1(+callable,+list,?list) - zero__or__more

---

fold_right/4

List folding (right associative). Closure is extended with three arguments: list element, accumulator, and updated accumulator.

Compilation flags:

     static

Template:

     fold__right(Closure,Accumulator,List,Result)

Meta-predicate template:

     fold__right(3,*,*,*)

Mode and number of proofs:

     fold__right(+callable,?term,+list,?term) - zero__or__more

---

fold_right_1/3

List folding (right associative). Closure is extended with three arguments: list element, accumulator, and updated accumulator. The initial value of the accumulator is the list first element. Fails for empty lists.

Compilation flags:

     static

Template:

     fold__right__1(Closure,List,Result)

Meta-predicate template:

     fold__right__1(3,*,*)

Mode and number of proofs:

     fold__right__1(+callable,+list,?term) - zero__or__more

---

scan_right/4

List scanning (right associative). Closure is extended with three arguments: list element, accumulator, and updated accumulator.

Compilation flags:
    static

Template:
    scan_right(Closure,Accumulator,List,Results)
Meta-predicate template:
    scan_right(3,*,*,*)
Mode and number of proofs:
    scan_right(+callable,?term,+list,?list) - zero_or_more

---

scan_right_1/3

List scanning (right associative). Closure is extended with three arguments: list element, accumulator, and updated accumulator. The accumulator is initialized with the list first element. Fails for empty lists.

Compilation flags:
    static

Template:
    scan_right_1(Closure,List,Results)
Meta-predicate template:
    scan_right_1(3,*,*)
Mode and number of proofs:
    scan_right_1(+callable,+list,?list) - zero_or_more

---

map/2

True if the predicate succeeds for each list element.

Compilation flags:
    static

Template:
    map(Closure,List)
Meta-predicate template:
    map(1,*)
Mode and number of proofs:
    map(+callable,?list) - zero_or_more

---

map/3

List mapping predicate taken arguments from two lists of elements.

Compilation flags:
    static

Template:
    map(Closure,List1,List2)
Meta-predicate template:
    map(2,*,*)
Mode and number of proofs:
    map(+callable,?list,?list) - zero_or_more

---

map/4

List mapping predicate taken arguments from three lists of elements.

Compilation flags:
    static

Template:
    map(Closure,List1,List2,List3)
Meta-predicate template:
    map(3,*,*,*)
Mode and number of proofs:
    map(+callable,?list,?list,?list) - zero_or_more

---

map/5

List mapping predicate taken arguments from four lists of elements.

Compilation flags:
    static

Template:
    map(Closure,List1,List2,List3,List4)
Meta-predicate template:
    map(4,*,*,*,*)
Mode and number of proofs:
    map(+callable,?list,?list,?list,?list) - zero_or_more

---

map/6

List mapping predicate taken arguments from five lists of elements.

Compilation flags:
    static

Template:
    map(Closure,List1,List2,List3,List4,List5)
Meta-predicate template:
    map(5,*,*,*,*,*)
Mode and number of proofs:
    map(+callable,?list,?list,?list,?list,?list) - zero_or_more

---

map/7

List mapping predicate taken arguments from six lists of elements.

Compilation flags:
    static

Template:
    map(Closure,List1,List2,List3,List4,List5,List6)

Meta-predicate template:
    map(6,*,*,*,*,*,*)
Mode and number of proofs:
    map(+callable,?list,?list,?list,?list,?list,?list) - zero_or_more

---

map/8

List mapping predicate taken arguments from seven lists of elements.

Compilation flags:
    static

Template:
    map(Closure,List1,List2,List3,List4,List5,List6,List7)
Meta-predicate template:
    map(7,*,*,*,*,*,*,*)
Mode and number of proofs:
    map(+callable,?list,?list,?list,?list,?list,?list,?list) - zero_or_more

---

map_reduce/5

Map a list and apply a fold left (reduce) to the resulting list.

Compilation flags:
    static

Template:
    map_reduce(Map,Reduce,Accumulator,List,Result)
Meta-predicate template:
    map_reduce(2,3,*,*,*)
Mode and number of proofs:
    map_reduce(+callable,+callable,+term,?list,?term) - zero_or_more

---

1.49 meta_compiler

object

1.49.1 meta_compiler

Compiler for the meta object meta-predicates. Generates auxiliary predicates in order to avoid meta-call overheads.

Availability:
> logtalk_load(meta_compiler(loader))

Author: Paulo Moura
Version: 0:16:0
Date: 2024-10-24

Compilation flags:
> static, context_switching_calls

Implements:
> public expanding
Uses:
> gensym
> list
> logtalk
> user

Remarks:

- Usage: Compile source files with calls to the meta object meta-predicates using the compiler option hook(meta_compiler).

Inherited public predicates:

goal_expansion/2 term_expansion/2

- Public predicates
- Protected predicates
- Private predicates
    - generated_predicate_/1
- Operators

Public predicates

(no local declarations; see entity ancestors if any)

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

generated_predicate_/1

Table of generated auxiliary predicates.

Compilation flags:
    dynamic

Template:
    generated_predicate_(Predicate)
Mode and number of proofs:
    generated_predicate_(?predicate_indicator) - zero_or_more

Operators

(none)

- Private predicates
- Operators

Public predicates

learn/3

Learns from a set of positive examples and a set of negative examples and returns the learned program.

Compilation flags:
    static

Template:
    learn(PositiveExamples,NegativeExamples,Program)
Mode and number of proofs:
    learn(@list(example),@list(example),-list(term)) - zero_or_more

---

learn/2

Learns from a set of positive examples and a set of negative examples and pretty prints the learned program.

Compilation flags:
    static

Template:
    learn(PositiveExamples,NegativeExamples)
Mode and number of proofs:
    learn(@list(example),@list(example)) - zero_or_more

---

learn_seq/2

Learns from a sequence of examples represented as a list of PositiveExamples/NegativeExamples elements and returns the learned program.

Compilation flags:
    static

Template:
    learn_seq(Examples,Program)
Mode and number of proofs:

learn__seq(@list(example),-list(clause)) - zero_or_one

learn_with_timeout/4

Learns from a set of positive examples and a set of negative examples and returns the learned program constrained by the given timeout or its default value.

Compilation flags:
> static

Template:
> learn_with_timeout(PositiveExamples,NegativeExamples,Program,Timeout)

Mode and number of proofs:
> learn_with_timeout(@list(example),@list(example),-list(term),+number) - zero_or_one_or_error
> learn_with_timeout(@list(example),@list(example),-list(term),-number) - zero_or_one_or_error

Exceptions:
> Learning does not complete in the allowed time:
>> timeout(learn(PositiveExamples,NegativeExamples,Program))

program_to_clauses/2

Converts a learned program into a list of clauses.

Compilation flags:
> static

Template:
> program_to_clauses(Program,Clauses)

Mode and number of proofs:
> program_to_clauses(@list(term),-list(clause)) - one

pprint/1

Pretty prints a learned program.

Compilation flags:
    static

Template:
    pprint(Program)
Mode and number of proofs:
    pprint(@list(term)) - one

Public predicates

mutation/3

Returns a random mutation of a term into another term of the same type. The input Term is assumed to be valid for the given Type.

Compilation flags:
    static

Template:
    mutation(Type,Term,Mutation)
Mode and number of proofs:
    mutation(@callable,@term,-term) - one

---

counter/2

Table of the number of mutations available per type.

Compilation flags:
    static

Template:
    counter(Type,N)
Mode and number of proofs:
    counter(?callable,?positive_integer) - zero_or_more

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

mutation/4

Returns a random mutation of a term into another term of the same type using mutator N. The input Term is assume to be valid for the given Type.

Compilation flags:
    static, multifile

Template:
    mutation(Type,N,Term,Mutation)
Mode and number of proofs:
    mutation(?callable,?positive_integer,@term,-term) - zero_or_more

---

counter_/2

Internal counter for the number of mutations available for a given type.

Compilation flags:
    dynamic

Template:
    counter_(Type,N)
Mode and number of proofs:
    counter_(?callable,?positive_integer) - zero_or_more

  - update_in/4
  - update_in/5
  - insert_in/4
  - delete_in/4
- Protected predicates
- Private predicates
- Operators

Public predicates

new/1

Create an empty (nested) dictionary.

Compilation flags:
    static

Template:
    new(Dictionary)
Mode and number of proofs:
    new(--dictionary) - one

---

empty/1

True iff the dictionary is empty.

Compilation flags:
    static

Template:
    empty(Dictionary)
Mode and number of proofs:
    empty(@dictionary) - zero_or_one

---

as_nested_dictionary/2

Creates a (nested) dictionary term from a curly-brackted term representation.

Compilation flags:
    static

Template:
    as_nested_dictionary(Term,Dictionary)
Mode and number of proofs:
    as_nested_dictionary(++term,--dictionary) - one_or_error

as_curly_bracketed/2

Creates a a curly-brackted term representation from a (nested) dictionary.

Compilation flags:
    static

Template:
    as_curly_bracketed(Dictionary,Term)
Mode and number of proofs:
    as_curly_bracketed(+dictionary,--term) - one_or_error

lookup_in/3

Lookup a chain of keys in a nested dictionary. Unifies Value with Dictionary when Keys is the empty list.

Compilation flags:
    static

Template:
    lookup_in(Keys,Value,Dictionary)
Mode and number of proofs:
    lookup_in(++list(ground),?term,+dictionary) - zero_or_more

update_in/4

Updates the value found by traversing through the nested keys.

Compilation flags:
    static

Template:
    update_in(OldDictionary,Keys,Value,NewDictionary)
Mode and number of proofs:

update__in(+dictionary,++list(ground),++term,--dictionary) - zero__or__one

---

update__in/5

Updates the value found by traversing through the nested keys, only succeeding if the value found after traversal matches the old value.

Compilation flags:
    static

Template:
    update__in(OldDictionary,Keys,OldValue,NewValue,NewDictionary)
Mode and number of proofs:
    update__in(+dictionary,++list(ground),?term,++term,--dictionary) - zero__or__one

---

insert__in/4

Inserts a key-value pair into a dictionary by traversing through the nested keys. When the key already exists, the associated value is updated.

Compilation flags:
    static

Template:
    insert__in(OldDictionary,Keys,Value,NewDictionary)
Mode and number of proofs:
    insert__in(+dictionary,++list(ground),++term,--dictionary) - zero__or__one

---

delete_in/4

Deletes a matching key-value pair from a dictionary by traversing through the nested keys, returning the updated dictionary.

Compilation flags:
> static

Template:
> delete_in(OldDictionary,Keys,Value,NewDictionary)

Mode and number of proofs:
> delete_in(+dictionary,++list(ground),?term,--dictionary) - zero_or_one

1.53 optionals

object

1.53.1 maybe

Types and predicates for type-checking and handling optional terms. Inspired by Haskell.

Availability:
   logtalk_load(optionals(loader))

Author: Paulo Moura
Version: 0:7:0
Date: 2021-01-03

Compilation flags:
   static, context_switching_calls

Provides:
   type::type/1
   type::check/2
   arbitrary::arbitrary/1
   arbitrary::arbitrary/2
Uses:
   optional
   optional(Optional)
   random
   type

Remarks:

- Type-checking support: Defines type maybe(Type) for checking optional terms where the value hold by the optional term must be of the given type.

- QuickCheck support: Defines clauses for the arbitrary::arbitrary/1-2 predicates to allow generating random values for the maybe(Type) type.

Inherited public predicates:

(none)

- Public predicates
    - cat/2
- Protected predicates
- Private predicates
- Operators

Public predicates

cat/2

Returns the values stored in the non-empty optional terms.

Compilation flags:

static

Template:

cat(Optionals,Values)

Mode and number of proofs:

cat(+list(optional),-list) - one

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

(no local declarations; see entity ancestors if any)

Operators

(none)

> **→ See also**
>
> optional, optional(Optional), type, arbitrary

object

1.53.2 optional

Constructors for optional terms. An optional term is either empty or holds a value. Optional terms should be regarded as opaque terms and always used with the optional/1 object by passing the optional term as a parameter.

Availability:
> logtalk_load(optionals(loader))

Author: Paulo Moura
Version: 2:1:0
Date: 2021-01-03

Compilation flags:
> static, context_switching_calls

Provides:
> type::type/1
> type::check/2

Remarks:

- Type-checking support: This object also defines a type optional for use with the type library object.

Inherited public predicates:
> (none)

- Public predicates

  - empty/1

  - of/2

  - from_goal/3

  - from_goal/2

  - from_generator/3

  - from_generator/2

- Protected predicates

- Private predicates

- Operators

Public predicates

empty/1

Constructs an empty optional term.

Compilation flags:
    static

Template:
    empty(Optional)
Mode and number of proofs:
    empty(--nonvar) - one

---

of/2

Constructs an optional term holding the given value.

Compilation flags:
    static

Template:
    of(Value,Optional)
Mode and number of proofs:
    of(@term,--nonvar) - one

---

from_goal/3

Constructs an optional term holding a value bound by calling the given goal. Returns an empty optional term if the goal fails or throws an error.

Compilation flags:

    static

Template:

    from_goal(Goal,Value,Optional)

Meta-predicate template:

    from_goal(0,*,*)

Mode and number of proofs:

    from_goal(+callable,--term,--nonvar) - one

from_goal/2

Constructs an optional term holding a value bound by calling the given closure. Returns an empty optional term if the closure fails or throws an error.

Compilation flags:

    static

Template:

    from_goal(Closure,Optional)

Meta-predicate template:

    from_goal(1,*)

Mode and number of proofs:

    from_goal(+callable,--nonvar) - one

from_generator/3

Constructs optional terms with the values generated by calling the given goal. On goal error or failure, returns an empty optional.

Compilation flags:
    static

Template:
    from_generator(Goal,Value,Optional)
Meta-predicate template:
    from_generator(0,*,*)
Mode and number of proofs:
    from_generator(+callable,--term,--nonvar) - one_or_more

from_generator/2

Constructs optional terms with the values generated by calling the given closure. On closure error or failure, returns an empty optional.

Compilation flags:
    static

Template:
    from_generator(Closure,Optional)
Meta-predicate template:
    from_generator(1,*)
Mode and number of proofs:
    from_generator(+from_generator,--nonvar) - one_or_more

Protected predicates

object

1.53.3 optional(Optional)

Optional term handling predicates. Requires passing an optional term (constructed using the optional object predicates) as a parameter.

Availability:
>   logtalk_load(optionals(loader))

Author: Paulo Moura
Version: 1:7:0
Date: 2019-11-26

Compilation flags:
>   static, context_switching_calls

Dependencies:
>   (none)

Remarks:
>   (none)

Inherited public predicates:
>   (none)

- Public predicates
    - is_empty/0

Public predicates

is_empty/0

True if the optional term is empty. See also the if_empty/1 predicate.

Compilation flags:
    static

Mode and number of proofs:
    is_empty - zero_or_one

is_present/0

True if the optional term holds a value. See also the if_present/1 predicate.

Compilation flags:
    static

Mode and number of proofs:
    is_present - zero_or_one

---

if_empty/1

Calls a goal if the optional term is empty. Succeeds otherwise.

Compilation flags:
    static

Template:
    if_empty(Goal)
Meta-predicate template:
    if_empty(0)
Mode and number of proofs:
    if_empty(+callable) - zero_or_more

---

if_present/1

Applies a closure to the value hold by the optional term if not empty. Succeeds otherwise.

Compilation flags:
    static

Template:
    if_present(Closure)
Meta-predicate template:
    if_present(1)
Mode and number of proofs:
    if_present(+callable) - zero_or_more

if_present_or_else/2

Applies a closure to the value hold by the optional term if not empty. Otherwise calls the given goal.

Compilation flags:
>   static

Template:
>   if_present_or_else(Closure,Goal)

Meta-predicate template:
>   if_present_or_else(1,0)

Mode and number of proofs:
>   if_present_or_else(+callable,+callable) - zero_or_more

filter/2

Returns the optional term when it is not empty and the value it holds satisfies a closure. Otherwise returns an empty optional term.

Compilation flags:
>   static

Template:
>   filter(Closure,NewOptional)

Meta-predicate template:
>   filter(1,*)

Mode and number of proofs:
>   filter(+callable,--nonvar) - one

map/2

When the optional term is not empty and mapping a closure with the value it holds and the new value as additional arguments is successful, returns an optional term with the new value. Otherwise returns an empty optional term.

Compilation flags:
    static

Template:
    map(Closure,NewOptional)
Meta-predicate template:
    map(2,*)
Mode and number of proofs:
    map(+callable,--nonvar) - one

---

flat_map/2

When the optional term is not empty and mapping a closure with the value it holds and the new optional term as additional arguments is successful, returns the new optional term. Otherwise returns an empty optional term.

Compilation flags:
    static

Template:
    flat_map(Closure,NewOptional)
Meta-predicate template:
    flat_map(2,*)
Mode and number of proofs:
    flat_map(+callable,--nonvar) - one

---

or/2

Returns the same optional term if not empty. Otherwise calls closure to generate a new optional term. Fails if optional term is empty and calling the closure fails or throws an error.

Compilation flags:
>   static

Template:
>   or(NewOptional,Closure)

Meta-predicate template:
>   or(*,1)

Mode and number of proofs:
>   or(--term,@callable) - zero_or_one

---

get/1

Returns the value hold by the optional term if not empty. Throws an error otherwise.

Compilation flags:
>   static

Template:
>   get(Value)

Mode and number of proofs:
>   get(--term) - one_or_error

Exceptions:
>   Optional is empty:
>>   existence_error(optional_term,Optional)

---

or_else/2

Returns the value hold by the optional term if not empty or the given default value if the optional term is empty.

Compilation flags:
    static

Template:
    or_else(Value,Default)
Mode and number of proofs:
    or_else(--term,@term) - one

---

or_else_get/2

Returns the value hold by the optional term if not empty. Applies a closure to compute the value otherwise. Throws an error when the optional term is empty and the value cannot be computed.

Compilation flags:
    static

Template:
    or_else_get(Value,Closure)
Meta-predicate template:
    or_else_get(*,1)
Mode and number of proofs:
    or_else_get(--term,+callable) - one_or_error

Exceptions:
    Optional is empty and the term cannot be computed:
        existence_error(optional_term,Optional)

---

or_else_call/2

Returns the value hold by the optional term if not empty or calls a goal deterministically if the optional term is empty.

Compilation flags:
>   static

Template:
>   or_else_call(Value,Goal)

Meta-predicate template:
>   or_else_call(*,0)

Mode and number of proofs:
>   or_else_call(--term,+callable) - zero_or_one

---

or_else_fail/1

Returns the value hold by the optional term if not empty. Fails otherwise. Usually called to skip over empty optional terms.

Compilation flags:
>   static

Template:
>   or_else_fail(Value)

Mode and number of proofs:
>   or_else_fail(--term) - zero_or_one

---

or_else_throw/2

Returns the value hold by the optional term if not empty. Throws the given error otherwise.

Compilation flags:
>   static

Template:
>   or_else_throw(Value,Error)

Mode and number of proofs:
    or_else_throw(--term,@nonvar) - one_or_error

Public predicates

check_option/1

Succeeds if the option is valid. Throws an error otherwise.

Compilation flags:
    static

Template:
    check_option(Option)
Mode and number of proofs:
    check_option(@term) - one_or_error

Exceptions:
    Option is a variable:
        instantiation_error
    Option is neither a variable nor a compound term:
        type_error(compound,Option)
    Option is a compound term but not a valid option:
        domain_error(option,Option)

---

check_options/1

Succeeds if all the options in a list are valid. Throws an error otherwise.

Compilation flags:
    static

Template:
    check_options(Options)
Mode and number of proofs:
    check_options(@term) - one_or_error

Exceptions:
    Options is a variable:
        instantiation_error
    Options is neither a variable nor a list:
        type_error(list,Options)
    An element Option of the list Options is a variable:

> > instantiation_error
>
> An element Option of the list Options is neither a variable nor a compound term:
>
> > type_error(compound,Option)
>
> An element Option of the list Options is a compound term but not a valid option:
>
> > domain_error(option,Option)

---

valid_option/1

Succeeds if the option is valid.

Compilation flags:

> static

Template:

> valid_option(Option)

Mode and number of proofs:

> valid_option(@term) - zero_or_one

---

valid_options/1

Succeeds if all the options in a list are valid.

Compilation flags:

> static

Template:

> valid_options(Options)

Mode and number of proofs:

> valid_options(@term) - one

---

default_option/1

Enumerates, by backtracking, the default options.

Compilation flags:
    static

Template:
    default_option(Option)
Mode and number of proofs:
    default_option(?compound) - zero_or_more

---

default_options/1

Returns a list of the default options.

Compilation flags:
    static

Template:
    default_options(Options)
Mode and number of proofs:
    default_options(-list(compound)) - one

---

option/2

True iff Option unifies with the first occurrence of the same option in the Options list.

Compilation flags:
    static

Template:
    option(Option,Options)
Mode and number of proofs:
    option(+compound,+list(compound)) - zero_or_one

---

option/3

True iff Option unifies with the first occurrence of the same option in the Options list or, when that is not the case, if Option unifies with Default.

Compilation flags:
    static

Template:
    option(Option,Options,Default)
Mode and number of proofs:
    option(+compound,+list(compound),+compound) - zero_or_one

---

Protected predicates

merge_options/2

Merges the user options with the default options, returning the final list of options. Calls the fix_options/2 predicate to preprocess the options after merging. Callers must ensure, if required, that the user options are valid.

Compilation flags:
    static

Template:
    merge_options(UserOptions,Options)
Mode and number of proofs:
    merge_options(+list(compound),-list(compound)) - one

---

fix_options/2

Fixes a list of options, returning the list of options.

Compilation flags:
    static

Template:

fix_options(Options,FixedOptions)

Mode and number of proofs:

fix_options(+list(compound),-list(compound)) - one

---

fix_option/2

Fixes an option.

Compilation flags:

static

Template:

fix_option(Option,FixedOption)

Mode and number of proofs:

fix_option(+compound,-compound) - zero_or_one

Private predicates

(none)

Operators

(none)

1.55 os

object

1.55.1 os

Portable operating-system access predicates.

Availability:
    logtalk_load(os(loader))

Author: Paulo Moura
Version: 1:101:2
Date: 2024-12-01

Compilation flags:
    static, context_switching_calls

Implements:
    public osp
Uses:
    list
Aliases:
    osp absolute_file_name/2 as expand_path/2

Remarks:

- File path expansion: To ensure portability, all file paths are expanded before being handed to the backend Prolog system.

- Exception terms: Currently, there is no standardization of the exception terms thrown by the different backend Prolog systems.

- B-Prolog portability: The wall_time/1 predicate is not supported.

- CxProlog portability: The date_time/7 predicate returns zeros for all arguments.

- JIProlog portability: The file_permission/2 and command_line_arguments/1 predicates are not supported.

- Quintus Prolog: The pid/1 and shell/2 predicates are not supported.

- XSB portability: The command_line_arguments/1 predicate is not supported.

Inherited public predicates:
    absolute_file_name/2 change_directory/1 command_line_arguments/1 copy_file/2 cpu_time/1
date_time/7 decompose_file_name/3 decompose_file_name/4 delete_directory/1
delete_directory_and_contents/1 delete_directory_contents/1 delete_file/1 directory_exists/1
directory_files/2 directory_files/3 ensure_directory/1 ensure_file/1 environment_variable/2
file_exists/1 file_modification_time/2 file_permission/2 file_size/2 full_device_path/1
internal_os_path/2 is_absolute_file_name/1 make_directory/1 make_directory_path/1
null_device_path/1 operating_system_machine/1 operating_system_name/1
operating_system_release/1 operating_system_type/1 path_concat/3 pid/1

read_only_device_path/1 rename_file/2 shell/1 shell/2 sleep/1 temporary_directory/1
time_stamp/1 wall_time/1 working_directory/1

category

1.55.2 os_types

A set of operating-system related types.

Availability:
    logtalk_load(os(loader))

Author: Paulo Moura
Version: 1:4:0
Date: 2021-02-12

Compilation flags:
    static

Provides:
    type::type/1
    type::check/2
Uses:
    list
    os

Remarks:

- Provided types: This category adds file, file(Extensions), file(Extensions,Permissions), directory, directory(Permissions), and environment_variable types for type-checking when using the type library object.

- Type file: For checking if a term is an atom and an existing file.

- Type file(Extensions): For checking if a term is an atom and an existing file with one of the listed extensions (specified as '.ext').

- Type file(Extensions,Permissions): For checking if a term is an atom and an existing file with one of the listed extensions (specified as '.ext') and listed permissions ({read, write, execute}).

- Type directory: For checking if a term is an atom and an existing directory.

- Type directory(Permissions): For checking if a term is an atom and an existing directory with the listed permissions ({read, write, execute}).

- Type environment_variable: For checking if a term is an atom and an existing environment variable.

protocol

1.55.3 osp

Portable operating-system access protocol.

Availability:
> logtalk_load(os(loader))

Author: Paulo Moura
Version: 1:40:0
Date: 2025-01-23

Compilation flags:
> static

Dependencies:
> (none)

Remarks:

- Error handling: Predicates that require a file or directory to exist throw an error when that is not the case. But the exact exception term is currently backend Prolog compiler dependent.

Inherited public predicates:

(none)

- Public predicates
    - pid/1
    - shell/2
    - shell/1
    - is_absolute_file_name/1
    - absolute_file_name/2

    - file_size/2
    - file_permission/2
    - copy_file/2
    - rename_file/2
    - delete_file/1

Public predicates

pid/1

Returns the process identifier of the running process.

Compilation flags:
    static

Template:
    pid(PID)
Mode and number of proofs:
    pid(-integer) - one

shell/2

Runs an operating-system shell command and returns its exit status.

Compilation flags:
    static

Template:
    shell(Command,Status)
Mode and number of proofs:
    shell(+atom,-integer) - one

---

shell/1

Runs an operating-system shell command.

Compilation flags:
    static

Template:
    shell(Command)
Mode and number of proofs:
    shell(+atom) - zero_or_one

---

is_absolute_file_name/1

True iff the argument is an absolute file path. On POSIX systems, this predicate is true if File starts with a /. On Windows systems, this predicate is true if File starts with a drive letter. No attempt is made to expand File as a path.

Compilation flags:
    static

Template:
    is_absolute_file_name(File)
Mode and number of proofs:
    is_absolute_file_name(+atom) - zero_or_one

absolute_file_name/2

Expands a file name to an absolute file path. An environment variable at the beginning of the file name is also expanded.

Compilation flags:
    static

Template:
    absolute_file_name(File,Path)
Mode and number of proofs:
    absolute_file_name(+atom,-atom) - one

decompose_file_name/3

Decomposes a file name into its directory (which always ends with a slash; ./ is returned if absent) and its basename (which can be the empty atom).

Compilation flags:
    static

Template:
    decompose_file_name(File,Directory,Basename)
Mode and number of proofs:
    decompose_file_name(+atom,?atom,?atom) - one

decompose_file_name/4

Decomposes a file name into its directory (which always ends with a slash; ./ is returned if absent), name (that can be the empty atom), and extension (which starts with a . when defined; the empty atom otherwise).

Compilation flags:
    static

Template:

decompose_file_name(File,Directory,Name,Extension)
Mode and number of proofs:
    decompose_file_name(+atom,?atom,?atom,?atom) - one

---

path_concat/3

Concatenates a path prefix and a path suffix, adding a / separator if required. Returns Suffix when it is an absolute path. Returns Prefix with a trailing / appended if missing when Suffix is the empty atom.

Compilation flags:
    static

Template:
    path_concat(Prefix,Suffix,Path)
Mode and number of proofs:
    path_concat(+atom,+atom,--atom) - one

---

internal_os_path/2

Converts between the internal path representation (which is backend dependent) and the operating-system native path representation.

Compilation flags:
    static

Template:
    internal_os_path(InternalPath,OSPath)
Mode and number of proofs:
    internal_os_path(+atom,-atom) - one
    internal_os_path(-atom,+atom) - one

---

make_directory/1

Makes a new directory. Succeeds if the directory already exists.

Compilation flags:
    static

Template:
    make_directory(Directory)
Mode and number of proofs:
    make_directory(+atom) - one

---

make_directory_path/1

Makes a new directory creating all the intermediate directories if necessary. Succeeds if the directory already exists.

Compilation flags:
    static

Template:
    make_directory_path(Directory)
Mode and number of proofs:
    make_directory_path(+atom) - one

---

delete_directory/1

Deletes an empty directory. Throws an error if the directory does not exist.

Compilation flags:
    static

Template:
    delete_directory(Directory)
Mode and number of proofs:
    delete_directory(+atom) - one_or_error

---

delete_directory_contents/1

Deletes directory contents. Throws an error if the directory does not exist.

Compilation flags:
    static

Template:
    delete_directory_contents(Directory)
Mode and number of proofs:
    delete_directory_contents(+atom) - one_or_error

delete_directory_and_contents/1

Deletes directory and its contents. Throws an error if the directory does not exist.

Compilation flags:
    static

Template:
    delete_directory_and_contents(Directory)
Mode and number of proofs:
    delete_directory_and_contents(+atom) - one_or_error

change_directory/1

Changes current working directory. Throws an error if the directory does not exist.

Compilation flags:
    static

Template:
    change_directory(Directory)
Mode and number of proofs:

change_directory(+atom) - one_or_error

working_directory/1

Current working directory.

Compilation flags:
    static

Template:
    working_directory(Directory)
Mode and number of proofs:
    working_directory(?atom) - zero_or_one

temporary_directory/1

Temporary directory. Tries first environment variables: TEMP and TMP on Windows systems; TMPDIR, TMP, TEMP, and TEMPDIR on POSIX systems. When not defined, tries default locations. Returns the working directory as last resort.

Compilation flags:
    static

Template:
    temporary_directory(Directory)
Mode and number of proofs:
    temporary_directory(?atom) - one

null_device_path/1

Null device path: nul on Windows systems and /dev/null on POSIX systems.

Compilation flags:
    static

Template:
    null_device_path(Path)
Mode and number of proofs:
    null_device_path(?atom) - one

---

full_device_path/1

Full device path: /dev/full on Linux and BSD systems. Fails on other systems. Experimental.

Compilation flags:
    static

Template:
    full_device_path(Path)
Mode and number of proofs:
    full_device_path(?atom) - zero_or_one

---

read_only_device_path/1

Read-only device path: /dev/urandom on macOS. Fails on other systems. Experimental.

Compilation flags:
    static

Template:
    read_only_device_path(Path)
Mode and number of proofs:
    read_only_device_path(?atom) - zero_or_one

---

directory_files/2

Returns a list of all files (including directories, regular files, and hidden directories and files) in a directory. File paths are relative to the directory. Throws an error if the directory does not exist.

Compilation flags:
    static

Template:
    directory_files(Directory,Files)
Mode and number of proofs:
    directory_files(+atom,-list(atom)) - one_or_error

directory_files/3

Returns a list of files filtered using the given list of options. Invalid options are ignored. Default option values are equivalent to directory_files/2. Throws an error if the directory does not exist.

Compilation flags:
    static

Template:
    directory_files(Directory,Files,Options)
Mode and number of proofs:
    directory_files(+atom,-list(atom),+list(compound)) - one_or_error

Remarks:

- Option paths/1: Possible values are relative and absolute. Default is relative.

- Option type/1: Possible values are all, regular, directory. Default is all.

- Option extensions/1: Argument is a list of required extensions (using the format '.ext'). Default is the empty list.

- Option prefixes/1: Argument is a list of required file prefixes (atoms). Default is the empty list.

- Option suffixes/1: Argument is a list of required file suffixes (atoms). Default is the empty list.

- Option dot_files/1: Possible values are true and false. Default is true.

directory_exists/1

True if the specified directory exists (irrespective of directory permissions).

Compilation flags:
     static

Template:
     directory_exists(Directory)
Mode and number of proofs:
     directory_exists(+atom) - zero_or_one

---

ensure_directory/1

Ensures that a directory exists, creating it if necessary.

Compilation flags:
     static

Template:
     ensure_directory(Directory)
Mode and number of proofs:
     ensure_directory(+atom) - one

---

file_exists/1

True if the specified file exists and is a regular file (irrespective of file permissions).

Compilation flags:
     static

Template:
     file_exists(File)
Mode and number of proofs:
     file_exists(+atom) - zero_or_one

---

file_modification_time/2

File modification time (which can be used for comparison). Throws an error if the file does not exist.

Compilation flags:
    static

Template:
    file_modification_time(File,Time)
Mode and number of proofs:
    file_modification_time(+atom,-integer) - one_or_error

---

file_size/2

File size (in bytes). Throws an error if the file does not exist.

Compilation flags:
    static

Template:
    file_size(File,Size)
Mode and number of proofs:
    file_size(+atom,-integer) - one_or_error

---

file_permission/2

True iff the specified file has the specified permission (read, write, or execute). Throws an error if the file does not exist.

Compilation flags:
    static

Template:
    file_permission(File,Permission)
Mode and number of proofs:
    file_permission(+atom,+atom) - zero_or_one_or_error

---

copy_file/2

Copies a file. Throws an error if the original file does not exist or if the copy cannot be created.

Compilation flags:
    static

Template:
    copy_file(File,Copy)
Mode and number of proofs:
    copy_file(+atom,+atom) - one_or_error

rename_file/2

Renames a file or a directory. Throws an error if the file or directory does not exist.

Compilation flags:
    static

Template:
    rename_file(Old,New)
Mode and number of proofs:
    rename_file(+atom,+atom) - one_or_error

delete_file/1

Deletes a file. Throws an error if the file does not exist.

Compilation flags:
    static

Template:
    delete_file(File)
Mode and number of proofs:

delete_file(+atom) - one_or_error

---

ensure_file/1

Ensures that a file exists, creating it if necessary.

Compilation flags:
    static

Template:
    ensure_file(File)
Mode and number of proofs:
    ensure_file(+atom) - one

---

environment_variable/2

Returns an environment variable value. Fails if the variable does not exists.

Compilation flags:
    static

Template:
    environment_variable(Variable,Value)
Mode and number of proofs:
    environment_variable(+atom,?atom) - zero_or_one

---

time_stamp/1

Returns a system-dependent time stamp, which can be used for sorting, but should be regarded otherwise as an opaque term.

Compilation flags:
    static

Template:
    time_stamp(Time)
Mode and number of proofs:
    time_stamp(-ground) - one

---

date_time/7

Returns the current date and time. Note that most backends do not provide sub-second accuracy and in those cases the value of the Milliseconds argument is always zero.

Compilation flags:
    static

Template:
    date_time(Year,Month,Day,Hours,Minutes,Seconds,Milliseconds)
Mode and number of proofs:
    date_time(-integer,-integer,-integer,-integer,-integer,-integer,-integer) - one

---

cpu_time/1

System cpu time in seconds.

Compilation flags:
    static

Template:
    cpu_time(Seconds)
Mode and number of proofs:
    cpu_time(-number) - one

---

wall_time/1

Wall time in seconds.

Compilation flags:
    static

Template:
    wall_time(Seconds)
Mode and number of proofs:
    wall_time(-number) - one

---

operating_system_type/1

Operating system type. Possible values are unix, windows, and unknown.

Compilation flags:
    static

Template:
    operating_system_type(Type)
Mode and number of proofs:
    operating_system_type(?atom) - zero_or_one

---

operating_system_name/1

Operating system name. On POSIX systems, it returns the value of uname -s. On macOS systems, it returns 'Darwin'. On Windows systems, it returns 'Windows'.

Compilation flags:
    static

Template:
    operating_system_name(Name)
Mode and number of proofs:
    operating_system_name(?atom) - zero_or_one

operating_system_machine/1

Operating system hardware platform. On POSIX systems, it returns the value of uname -m. On Windows systems, it returns the value of the PROCESSOR_ARCHITECTURE environment variable.

Compilation flags:
    static

Template:
    operating_system_machine(Machine)
Mode and number of proofs:
    operating_system_machine(?atom) - zero_or_one

operating_system_release/1

Operating system release. On POSIX systems, it returns the value of uname -r. On Windows systems, it uses WMI code.

Compilation flags:
    static

Template:
    operating_system_release(Release)
Mode and number of proofs:
    operating_system_release(?atom) - zero_or_one

command_line_arguments/1

Returns a list with the command line arguments that occur after --.

Compilation flags:
    static

Template:

command_line_arguments(Arguments)

Mode and number of proofs:

command_line_arguments(-list(atom)) - one

---

sleep/1

Suspends execution the given number of seconds.

Compilation flags:

static

Template:

sleep(Seconds)

Mode and number of proofs:

sleep(+number) - one

1.56 packs

protocol

1.56.1 pack_protocol

Pack specification protocol. Objects implementing this protocol should be named after the pack with a _pack suffix and saved in a file with the same name as the object.

Availability:

Public predicates

[name/1](#)

Pack name.

Compilation flags:
    static

Template:
    name(Name)
Mode and number of proofs:
    name(?atom) - zero_or_one

[description/1](#)

Pack one line description.

Compilation flags:
    static

Template:
    description(Description)
Mode and number of proofs:
    description(?atom) - zero_or_one

[license/1](#)

Pack license. Specified using the identifier from the SPDX License List (https://spdx.org/licenses/) when possible.

Compilation flags:
    static

Template:

license(License)

Mode and number of proofs:

license(?atom) - zero_or_one

---

home/1

Pack home HTTPS or file URL.

Compilation flags:

static

Template:

home(Home)

Mode and number of proofs:

home(?atom) - zero_or_one

---

version/6

Table of available versions.

Compilation flags:

static

Template:

version(Version,Status,URL,Checksum,Dependencies,Portability)

Mode and number of proofs:

version(?compound,?atom,-atom,-pair(atom,atom),-list(pair(atom,callable)),?atom) - zero_or_more

version(?compound,?atom,-atom,-pair(atom,atom),-list(pair(atom,callable)),-list(atom)) -
zero_or_more

Remarks:

- Version: This argument uses the same format as entity versions: Major:Minor:Patch. Semantic versioning should be used.

- Status: Version development status. E.g stable, rc, beta, alpha, or deprecated.

- URL: File URL for a local directory, file URL for a local archive, download HTTPS URL for the pack archive, or download git archive URL for the pack archive.

- Checksum: A pair where the key is the hash algorithm and the value is the checksum. Currently, the hash algorithm must be sha256. For file:// URLs of local directories, use none instead of a pair.

- Dependencies: Pack dependencies list. Each dependency is a Dependency Operator Version term. Operator is a term comparison operator. Valid Dependency values are Registry::Pack, os(Name,Machine), logtalk, and a backend identifier atom.

- Portability: Either the atom all or a list of the supported backend Prolog compilers (using the identifier atoms used by the prolog_dialect flag).

- Clause order: Versions must be listed ordered from newest to oldest.

---

note/3

Table of notes per action and version.

Compilation flags:
    static

Template:
    note(Action,Version,Note)
Mode and number of proofs:
    note(?atom,?term,-atom) - zero_or_more

Remarks:

- Action: Possible values are install, update, and uninstall. When unbound, the note apply to all actions.

- Version: Version being installed, updated, or uninstalled. When unbound, the note apply to all versions.

- Note: Note to print when performing an action on a pack version.

Public predicates

available/2

Enumerates, by backtracking, all available packs.

Compilation flags:
    static

Template:
    available(Registry,Pack)
Mode and number of proofs:
    available(?atom,?atom) - zero_or_more

Exceptions:
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)
    Pack is neither a variable nor an atom:
        type_error(atom,Pack)

available/1

Lists all the packs that are available for installation from the given registry.

Compilation flags:
    static

Template:
    available(Registry)
Mode and number of proofs:
    available(+atom) - one

Exceptions:
    Registry is a variable:
        instantiation_error
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)

---

available/0

Lists all the packs that are available for installation from all defined registries.

Compilation flags:
    static

Mode and number of proofs:
    available - one

---

installed/4

Enumerates by backtracking all installed packs.

Compilation flags:
    static

Template:

installed(Registry,Pack,Version,Pinned)

Mode and number of proofs:

installed(?atom,?atom,?compound,?boolean) - zero_or_more

Exceptions:

Registry is neither a variable nor an atom:

type_error(atom,Registry)

Pack is neither a variable nor an atom:

type_error(atom,Pack)

Version is neither a variable nor a compound term:

type_error(compound,Version)

Pinned is neither a variable nor a boolean:

type_error(boolean,Pinned)

---

installed/3

Enumerates by backtracking all installed packs.

Compilation flags:

static

Template:

installed(Registry,Pack,Version)

Mode and number of proofs:

installed(?atom,?atom,?compound) - zero_or_more

Exceptions:

Registry is neither a variable nor an atom:

type_error(atom,Registry)

Pack is neither a variable nor an atom:

type_error(atom,Pack)

Version is neither a variable nor a compound term:

type_error(compound,Version)

---

installed/1

Lists all the packs that are installed from the given registry. Fails if the registry is unknown.

Compilation flags:
     static

Template:
     installed(Registry)
Mode and number of proofs:
     installed(+atom) - zero_or_one

Exceptions:
     Registry is a variable:
          instantiation_error
     Registry is neither a variable nor an atom:
          type_error(atom,Registry)

---

installed/0

Lists all the packs that are installed.

Compilation flags:
     static

Mode and number of proofs:
     installed - one

---

outdated/4

Enumerates by backtracking all installed but outdated packs (together with the current version installed and the latest version available).

Compilation flags:
     static

Template:

outdated(Registry,Pack,Version,LatestVersion)

Mode and number of proofs:

outdated(?atom,?atom,?compound,?compound) - zero_or_more

Exceptions:

Registry is neither a variable nor an atom:

type_error(atom,Registry)

Pack is neither a variable nor an atom:

type_error(atom,Pack)

Version is neither a variable nor a compound term:

type_error(compound,Version)

LatestVersion is neither a variable nor a compound term:

type_error(compound,LatestVersion)

---

outdated/1

Lists all the packs from the given registry that are installed but outdated.

Compilation flags:

static

Template:

outdated(Registry)

Mode and number of proofs:

outdated(+atom) - one

Exceptions:

Registry is neither a variable nor an atom:

type_error(atom,Registry)

---

outdated/0

Lists all the packs that are installed but outdated.

Compilation flags:

static

Mode and number of proofs:
    outdated - one

---

orphaned/2

Lists all the packs that are installed but whose registry is no longer defined.

Compilation flags:
    static

Template:
    orphaned(Registry,Pack)
Mode and number of proofs:
    orphaned(?atom,?atom) - zero_or_more

Exceptions:
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)
    Pack is neither a variable nor an atom:
        type_error(atom,Pack)

---

orphaned/0

Lists all the packs that are installed but whose registry is no longer defined.

Compilation flags:
    static

Mode and number of proofs:
    orphaned - one

---

versions/3

Returns a list of all available pack versions. Fails if the pack is unknown.

Compilation flags:
    static

Template:
    versions(Registry,Pack,Versions)
Mode and number of proofs:
    versions(+atom,+atom,-list) - zero_or_one

Exceptions:
    Registry is a variable:
        instantiation_error
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)
    Pack is a variable:
        instantiation_error
    Pack is neither a variable nor an atom:
        type_error(atom,Pack)

---

describe/2

Describes a registered pack, including installed version if applicable. Fails if the pack is unknown.

Compilation flags:
    static

Template:
    describe(Registry,Pack)
Mode and number of proofs:
    describe(+atom,+atom) - zero_or_one

Exceptions:
    Registry is a variable:
        instantiation_error
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)
    Pack is a variable:

> instantiation_error
>
> Pack is neither a variable nor an atom:
>> type_error(atom,Pack)

---

describe/1

Describes a registered pack, including installed version if applicable. Fails if the pack is unknown.

Compilation flags:
> static

Template:
> describe(Pack)

Mode and number of proofs:
> describe(+atom) - zero_or_one

Exceptions:
> Pack is a variable:
>> instantiation_error
>
> Pack is neither a variable nor an atom:
>> type_error(atom,Pack)

---

search/1

Searches packs whose name or description includes the search term (case sensitive).

Compilation flags:
> static

Template:
> search(Term)

Mode and number of proofs:
> search(+atom) - one

Exceptions:
> Term is a variable:
>> instantiation_error

Term is neither a variable nor an atom:

    type_error(atom,Term)

---

install/4

Installs a new pack using the specified options. Fails if the pack is unknown or already installed but not using update(true) or force(true) options. Fails also if the pack version is unknown.

Compilation flags:

    static

Template:

    install(Registry,Pack,Version,Options)

Mode and number of proofs:

    install(+atom,+atom,++compound,++list(compound)) - zero_or_one

Exceptions:

    Registry is a variable:

        instantiation_error

    Registry is neither a variable nor an atom:

        type_error(atom,Registry)

    Pack is a variable:

        instantiation_error

    Pack is neither a variable nor an atom:

        type_error(atom,Pack)

    Version is a variable:

        instantiation_error

    Version is neither a variable nor a valid version:

        type_error(pack_version,Version)

    Options is a variable:

        instantiation_error

    Options is neither a variable nor a list:

        type_error(list,Options)

    An element Option of the list Options is a variable:

        instantiation_error

    An element Option of the list Options is neither a variable nor a compound term:

        type_error(compound,Option)

    An element Option of the list Options is a compound term but not a valid option:

        domain_error(option,Option)

Remarks:

- update(Boolean) option: Update pack if already installed. Default is false. Overrides the force/1 option.

- force(Boolean) option: Force pack re-installation if already installed. Default is false.

- compatible(Boolean) option: Restrict installation to compatible packs. Default is true.

- clean(Boolean) option: Clean pack archive after installation. Default is false.

- verbose(Boolean) option: Verbose installing steps. Default is false.

- checksum(Boolean) option: Verify pack archive checksum. Default is true.

- checksig(Boolean) option: Verify pack archive signature. Default is false.

- git(Atom) option: Extra command-line options. Default is ''.

- downloader(Atom) option: Downloader utility. Either curl or wget. Default is curl.

- curl(Atom) option: Extra command-line options. Default is ''.

- wget(Atom) option: Extra command-line options. Default is ''.

- gpg(Atom) option: Extra command-line options. Default is ''.

- tar(Atom) option: Extra command-line options. Default is ''.

---

install/3

Installs the specified version of a pack from the given registry using default options. Fails if the pack is already installed or unknown. Fails also if the pack version is unknown.

Compilation flags:
    static

Template:
    install(Registry,Pack,Version)
Mode and number of proofs:
    install(+atom,+atom,?compound) - zero_or_one

Exceptions:
    Registry is a variable:
        instantiation_error
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)
    Pack is a variable:
        instantiation_error
    Pack is neither a variable nor an atom:
        type_error(atom,Pack)
    Version is a variable:
        instantiation_error
    Version is neither a variable nor a valid version:

type_error(pack_version,Version)

---

install/2

Installs the latest version of a pack from the given registry using default options. Fails if the pack is already installed or unknown.

Compilation flags:
    static

Template:
    install(Registry,Pack)
Mode and number of proofs:
    install(+atom,+atom) - zero_or_one

Exceptions:
    Registry is a variable:
        instantiation_error
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)
    Pack is a variable:
        instantiation_error
    Pack is neither a variable nor an atom:
        type_error(atom,Pack)

---

install/1

Installs a pack (if its name is unique among all registries) using default options. Fails if the pack is already installed or unknown. Fails also if the pack is available from multiple registries.

Compilation flags:
    static

Template:
    install(Pack)
Mode and number of proofs:
    install(+atom) - zero_or_one

Exceptions:
    Pack is a variable:
        instantiation_error
    Pack is not an atom:
        type_error(atom,Pack)

---

update/3

Updates an outdated pack to the specified version using the specified options. Fails if the pack or the pack version is unknown or if the pack is not installed. Fails also if the pack is orphaned or pinned and not using a force(true) option.

Compilation flags:
    static

Template:
    update(Pack,Version,Options)
Mode and number of proofs:
    update(+atom,++callable,++list(callable)) - zero_or_one

Exceptions:
    Pack is a variable:
        instantiation_error
    Pack is neither a variable nor an atom:
        type_error(atom,Pack)
    Version is a variable:
        instantiation_error
    Version is neither a variable nor a valid version:
        type_error(pack_version,Version)
    Options is a variable:
        instantiation_error
    Options is neither a variable nor a list:
        type_error(list,Options)
    An element Option of the list Options is a variable:
        instantiation_error
    An element Option of the list Options is neither a variable nor a compound term:
        type_error(compound,Option)
    An element Option of the list Options is a compound term but not a valid option:
        domain_error(option,Option)

Remarks:

- install(Boolean) option: Install pack latest version if not already installed. Default is false.

- force(Boolean) option: Force update if the pack is pinned or breaks installed packs. Default is false.

- compatible(Boolean) option: Restrict updating to compatible packs. Default is true.

- clean(Boolean) option: Clean pack archive after updating. Default is false.

- verbose(Boolean) option: Verbose updating steps. Default is false.

- checksum(Boolean) option: Verify pack archive checksum. Default is true.

- checksig(Boolean) option: Verify pack archive signature. Default is false.

- git(Atom) option: Extra command-line options. Default is ''.

- downloader(Atom) option: Downloader utility. Either curl or wget. Default is curl.

- curl(Atom) option: Extra command-line options. Default is ''.

- wget(Atom) option: Extra command-line options. Default is ''.

- gpg(Atom) option: Extra command-line options. Default is ''.

- tar(Atom) option: Extra command-line options. Default is ''.

---

update/2

Updates an outdated pack to its latest version using the specified options. Fails if the pack is orphaned, unknown, or not installed. Fails also if the pack is pinned and not using a force(true) option.

Compilation flags:
    static

Template:
    update(Pack,Options)
Mode and number of proofs:
    update(+atom,++list(callable)) - zero_or_one

Exceptions:
    Pack is a variable:
        instantiation_error
    Pack is neither a variable nor an atom:
        type_error(atom,Pack)
    Options is a variable:
        instantiation_error
    Options is neither a variable nor a list:
        type_error(list,Options)
    An element Option of the list Options is a variable:
        instantiation_error
    An element Option of the list Options is neither a variable nor a compound term:
        type_error(compound,Option)

An element Option of the list Options is a compound term but not a valid option:
    domain_error(option,Option)

Remarks:

- install(Boolean) option: Install pack latest version if not already installed. Default is false.
- force(Boolean) option: Force update if the pack is pinned or breaks installed packs. Default is false.
- compatible(Boolean) option: Restrict updating to compatible packs. Default is true.
- clean(Boolean) option: Clean pack archive after updating. Default is false.
- verbose(Boolean) option: Verbose updating steps. Default is false.
- checksum(Boolean) option: Verify pack archive checksum. Default is true.
- checksig(Boolean) option: Verify pack archive signature. Default is false.
- git(Atom) option: Extra command-line options. Default is ''.
- downloader(Atom) option: Downloader utility. Either curl or wget. Default is curl.
- curl(Atom) option: Extra command-line options. Default is ''.
- wget(Atom) option: Extra command-line options. Default is ''.
- gpg(Atom) option: Extra command-line options. Default is ''.
- tar(Atom) option: Extra command-line options. Default is ''.

---

update/1

Updates an outdated pack to its latest version using default options. Fails if the pack is pinned, orphaned, not installed, unknown, or breaks installed packs.

Compilation flags:
    static

Template:
    update(Pack)
Mode and number of proofs:
    update(+atom) - zero_or_one

Exceptions:
    Pack is a variable:
        instantiation_error
    Pack is neither a variable nor an atom:
        type_error(atom,Pack)

---

update/0

Updates all outdated packs (that are not pinned) using default options.

Compilation flags:
    static

Mode and number of proofs:
    update - zero_or_one

---

uninstall/2

Uninstalls a pack using the specified options. Fails if the pack is unknown or not installed. Fails also if the pack is pinned or have dependents and not using a force(true) option.

Compilation flags:
    static

Template:
    uninstall(Pack,Options)
Mode and number of proofs:
    uninstall(+atom,++list(compound)) - zero_or_one

Exceptions:
    Pack is a variable:
        instantiation_error
    Pack is neither a variable nor an atom:
        type_error(atom,Pack)
    Options is a variable:
        instantiation_error
    Options is neither a variable nor a list:
        type_error(list,Options)
    An element Option of the list Options is a variable:
        instantiation_error
    An element Option of the list Options is neither a variable nor a compound term:
        type_error(compound,Option)
    An element Option of the list Options is a compound term but not a valid option:
        domain_error(option,Option)

Remarks:

- force(Boolean) option: Force deletion if the pack is pinned. Default is false.

- clean(Boolean) option: Clean pack archive after deleting. Default is false.

- verbose(Boolean) option: Verbose uninstalling steps. Default is false.

---

uninstall/1

Uninstalls a pack using default options. Fails if the pack is pinned, have dependents, not installed, or unknown.

Compilation flags:
    static

Template:
    uninstall(Pack)
Mode and number of proofs:
    uninstall(+atom) - zero_or_one

Exceptions:
    Pack is a variable:
        instantiation_error
    Pack is neither a variable nor an atom:
        type_error(atom,Pack)

---

uninstall/0

Uninstalls all packs using the force(true) option.

Compilation flags:
    static

Mode and number of proofs:
    uninstall - zero_or_one

---

clean/2

Cleans all pack archives. Fails if the the pack is unknown.

Compilation flags:
    static

Template:
    clean(Registry,Pack)
Mode and number of proofs:
    clean(+atom,+atom) - zero_or_one

Exceptions:
    Registry is a variable:
        instantiation_error
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)
    Pack is a variable:
        instantiation_error
    Pack is neither a variable nor an atom:
        type_error(atom,Pack)

---

clean/1

Cleans all pack archives. Fails if the pack is unknown.

Compilation flags:
    static

Template:
    clean(Pack)
Mode and number of proofs:
    clean(+atom) - zero_or_one

Exceptions:
    Pack is a variable:
        instantiation_error
    Pack is neither a variable nor an atom:
        type_error(atom,Pack)

clean/0

Cleans all archives for all packs.

Compilation flags:
    static

Mode and number of proofs:
    clean - one

save/2

Saves a list of all installed packs and registries plus pinning status to a file using the given options. Registries without installed packs are saved when using the option save(all) and skipped when using the option save(installed) (default).

Compilation flags:
    static

Template:
    save(File,Options)
Mode and number of proofs:
    save(+atom,++list(compound)) - one_or_error

Exceptions:
    File is a variable:
        instantiation_error
    File is neither a variable nor an atom:
        type_error(atom,File)
    File is an existing file but cannot be written:
        permission_error(open,source_sink,File)
    Options is a variable:
        instantiation_error
    Options is neither a variable nor a list:
        type_error(list,Options)
    An element Option of the list Options is a variable:
        instantiation_error
    An element Option of the list Options is neither a variable nor a compound term:

type_error(compound,Option)

An element Option of the list Options is a compound term but not a valid option:

domain_error(option,Option)

---

save/1

Saves a list of all installed packs and their registries plus pinning status to a file using default options.

Compilation flags:
    static

Template:
    save(File)
Mode and number of proofs:
    save(+atom) - one_or_error

Exceptions:
    File is a variable:
        instantiation_error
    File is neither a variable nor an atom:
        type_error(atom,File)
    File is an existing file but cannot be written:
        permission_error(open,source_sink,File)

---

restore/2

Restores a list of registries and packs plus their pinning status from a file using the given options. Fails if restoring is not possible.

Compilation flags:
    static

Template:
    restore(File,Options)
Mode and number of proofs:
    restore(+atom,++list(compound)) - zero_or_one_or_error

Exceptions:
>   File is a variable:
>> instantiation_error
>
>   File is neither a variable nor an atom:
>> type_error(atom,File)
>
>   File is an atom but not an existing file:
>> existence_error(file,File)
>
>   File is an existing file but cannot be read:
>> permission_error(open,source_sink,File)
>
>   Options is a variable:
>> instantiation_error
>
>   Options is neither a variable nor a list:
>> type_error(list,Options)
>
>   An element Option of the list Options is a variable:
>> instantiation_error
>
>   An element Option of the list Options is neither a variable nor a compound term:
>> type_error(compound,Option)
>
>   An element Option of the list Options is a compound term but not a valid option:
>> domain_error(option,Option)

Remarks:

- force(Boolean) option: Force restoring if a registry is already defined or a pack is already installed. Default is true.

- compatible(Boolean) option: Restrict installation to compatible packs. Default is true.

- clean(Boolean) option: Clean registry and pack archives after restoring. Default is false.

- verbose(Boolean) option: Verbose restoring steps. Default is false.

- checksum(Boolean) option: Verify pack archive checksums. Default is true.

- checksig(Boolean) option: Verify pack archive signatures. Default is false.

- git(Atom) option: Extra command-line options. Default is ''.

- downloader(Atom) option: Downloader utility. Either curl or wget. Default is curl.

- curl(Atom) option: Extra command-line options. Default is ''.

- wget(Atom) option: Extra command-line options. Default is ''.

- gpg(Atom) option: Extra command-line options. Default is ''.

- tar(Atom) option: Extra command-line options. Default is ''.

restore/1

Restores a list of registries and packs plus their pinning status from a file using default options. Fails if restoring is not possible.

Compilation flags:
    static

Template:
    restore(File)
Mode and number of proofs:
    restore(+atom) - zero_or_one_or_error

Exceptions:
    File is a variable:
        instantiation_error
    File is neither a variable nor an atom:
        type_error(atom,File)
    File is an atom but not an existing file:
        existence_error(file,File)
    File is an existing file but cannot be read:
        permission_error(open,source_sink,File)

---

dependents/3

Returns a list of all installed packs that depend on the given pack from the given registry. Fails if the pack is unknown.

Compilation flags:
    static

Template:
    dependents(Registry,Pack,Dependents)
Mode and number of proofs:
    dependents(+atom,+atom,-list(atom)) - zero_or_one

Exceptions:
    Registry is a variable:
        instantiation_error
    Registry is neither a variable nor an atom:

type_error(atom,Registry)
Pack is a variable:
instantiation_error
Pack is neither a variable nor an atom:
type_error(atom,Pack)

---

dependents/2

Prints a list of all installed packs that depend on the given pack from the given registry. Fails if the pack is unknown.

Compilation flags:
static

Template:
dependents(Registry,Pack)
Mode and number of proofs:
dependents(+atom,+atom) - zero_or_one

Exceptions:
Registry is a variable:
instantiation_error
Registry is neither a variable nor an atom:
type_error(atom,Registry)
Pack is a variable:
instantiation_error
Pack is neither a variable nor an atom:
type_error(atom,Pack)

---

dependents/1

Prints a list of all installed packs that depend on the given pack if unique from all defined registries. Fails if the pack is unknown or available from multiple registries.

Compilation flags:
static

Template:

---

dependents(Pack)

Mode and number of proofs:

dependents(+atom) - zero_or_one

Exceptions:

Pack is a variable:

instantiation_error

Pack is neither a variable nor an atom:

type_error(atom,Pack)

---

lint/2

Checks the pack specification. Fails if the pack is unknown or if linting detects errors.

Compilation flags:

static

Template:

lint(Registry,Pack)

Mode and number of proofs:

lint(+atom,+atom) - zero_or_one

Exceptions:

Registry is a variable:

instantiation_error

Registry is neither a variable nor an atom:

type_error(atom,Registry)

Pack is a variable:

instantiation_error

Pack is neither a variable nor an atom:

type_error(atom,Pack)

---

lint/1

Checks the pack specification. Fails if the pack is unknown, or available from multiple registries, or if linting detects errors.

Compilation flags:
    static

Template:
    lint(Pack)
Mode and number of proofs:
    lint(+atom) - zero_or_one

Exceptions:
    Pack is a variable:
        instantiation_error
    Pack is neither a variable nor an atom:
        type_error(atom,Pack)

---

lint/0

Checks all pack specifications.

Compilation flags:
    static

Mode and number of proofs:
    lint - one

Public predicates

setup/0

Ensures that registries and packs directory structure exists. Preserves any defined registries and installed packs.

Compilation flags:
    static

Mode and number of proofs:
    setup - one

---

reset/0

Resets registries and packs directory structure. Deletes any defined registries and installed packs.

Compilation flags:
    static

Mode and number of proofs:
    reset - one

---

verify_commands_availability/0

Verifies required shell commands availability. Fails printing an error message if a command is missing.

Compilation flags:
    static

Mode and number of proofs:
    verify_commands_availability - zero_or_one

---

help/0

Provides help about the main predicates.

Compilation flags:
    static

Mode and number of proofs:
    help - one

---

pin/1

Pins a resource (pack or registry) preventing it from being updated, uninstalled, or deleted. Fails if the resource is not found.

Compilation flags:
    static

Template:
    pin(Resource)
Mode and number of proofs:
    pin(+atom) - zero_or_one

Exceptions:
    Resource is a variable:
        instantiation_error
    Resource is neither a variable nor an atom:
        type_error(atom,Resource)

---

pin/0

Pins all resource (packs or registries) preventing them from being updated, uninstalled, or deleted. Note that resources added after calling this predicate will not be pinned.

Compilation flags:
    static

Mode and number of proofs:
    pin - one

---

unpin/1

Unpins a resource (pack or registry), allowing it to be updated, uninstalled, or deleted. Fails if the resource is not found.

Compilation flags:
    static

Template:
    unpin(Resource)
Mode and number of proofs:
    unpin(+atom) - zero_or_one

Exceptions:
    Resource is a variable:
        instantiation_error
    Resource is neither a variable nor an atom:
        type_error(atom,Resource)

---

unpin/0

Unpins all resources (packs or registries), allowing them to be updated, uninstalled, or deleted.

Compilation flags:
    static

Mode and number of proofs:
    unpin - one

---

pinned/1

True iff the resource (pack or registry) is defined or installed and if it is pinned.

Compilation flags:
    static

Template:
    pinned(Resource)
Mode and number of proofs:
    pinned(+atom) - zero_or_one

Exceptions:
    Resource is a variable:
        instantiation_error
    Resource is neither a variable nor an atom:
        type_error(atom,Resource)

---

directory/2

Enumerates by backtracking all packs or registries and respective installation or definition directories (using the internal backend format).

Compilation flags:
    static

Template:
    directory(Resource,Directory)
Mode and number of proofs:
    directory(?atom,?atom) - zero_or_more

Exceptions:
    Resource is neither a variable nor an atom:
        type_error(atom,Resource)
    Directory is neither a variable nor an atom:
        type_error(atom,Directory)

---

directory/1

Prints the directory where the registry or the pack is installed (using the native operating-system format).

Compilation flags:
    static

Template:
    directory(Resource)
Mode and number of proofs:
    directory(+atom) - zero_or_one

Exceptions:
    Resource is a variable:
        instantiation_error
    Resource is neither a variable nor an atom:
        type_error(atom,Resource)

---

readme/2

Returns the path to the resource (pack or registry) readme file (using the internal backend format). Fails if the resource is not defined or installed or if no readme file is found for it.

Compilation flags:
    static

Template:
    readme(Resource,ReadMeFile)
Mode and number of proofs:
    readme(+atom,-atom) - zero_or_one

Exceptions:
    Resource is a variable:
        instantiation_error
    Resource is neither a variable nor an atom:
        type_error(atom,Resource)
    ReadMeFile is neither a variable nor an atom:
        type_error(atom,ReadMeFile)

readme/1

Prints the path to the resource (pack or registry) readme file (using the native operating-system format). Fails if the resource is not defined or installed or if no readme file is found for it.

Compilation flags:
    static

Template:
    readme(Resource)
Mode and number of proofs:
    readme(+atom) - zero_or_one

Exceptions:
    Resource is a variable:
        instantiation_error
    Resource is neither a variable nor an atom:
        type_error(atom,Resource)

---

logtalk_packs/1

Returns the directory prefix (using the internal backend format) where the registries, packs, and archives are installed.

Compilation flags:
    static

Template:
    logtalk_packs(LogtalkPacks)
Mode and number of proofs:
    logtalk_packs(-atom) - one

Exceptions:
    LogtalkPacks is neither a variable nor an atom:
        type_error(atom,LogtalkPacks)

---

logtalk_packs/0

Prints the directory prefix (using the native operating-system format) where the registries, packs, and archives are installed.

Compilation flags:
    static

Mode and number of proofs:
    logtalk_packs - one

---

prefix/1

Returns the directory prefix (using the internal backend format) where the registries or packs are installed.

Compilation flags:
    static

Template:
    prefix(Prefix)
Mode and number of proofs:
    prefix(-atom) - one

Exceptions:
    Prefix is neither a variable nor an atom:
        type_error(atom,Prefix)

---

prefix/0

Prints the directory prefix (using the native operating-system format) where the registries or packs are installed.

Compilation flags:
    static

Mode and number of proofs:

prefix - one

Protected predicates

readme_file_path/2

Returns the absolute path for the given directory readme file if it exists.

Compilation flags:
    static

Template:
    readme_file_path(Directory,ReadMeFile)
Mode and number of proofs:
    readme_file_path(+atom,-atom) - zero_or_one

Remarks:

- Valid file names: Case variations of README and NOTES with or without a .md or .txt extension. The recommended file name is README.md.

---

print_readme_file_path/1

Prints the absolute path for the given directory readme file if it exists. Succeeds otherwise.

Compilation flags:
    static

Template:
    print_readme_file_path(Directory)
Mode and number of proofs:
    print_readme_file_path(+atom) - one

---

command/2

Executes a shell command. Prints an error message and fails if the command fails.

Compilation flags:
    static

Template:
    command(Command,FailureMessage)
Mode and number of proofs:
    command(+atom,@nonvar) - zero_or_one

---

load_registry/1

Loads all registry files from the given directory.

Compilation flags:
    static

Template:
    load_registry(Directory)
Mode and number of proofs:
    load_registry(+atom) - zero_or_one

---

sha256sum_command/1

Returns the name of the sha256sum command to be used on POSIX systems. Fails if neither gsha256sum or sha256sum commands are found.

Compilation flags:
    static

Template:
    sha256sum_command(Command)
Mode and number of proofs:
    sha256sum_command(-atom) - zero_or_one

tar_command/1

Returns the name of the tar command to be used depending on the operating-system.

Compilation flags:
    static

Template:
    tar_command(Command)
Mode and number of proofs:
    tar_command(-atom) - one

supported_archive/1

True iff the archive format is supported.

Compilation flags:
    static

Template:
    supported_archive(Extension)
Mode and number of proofs:
    supported_archive(+atom) - zero_or_one

supported_url_archive/1

True iff the URL archive is supported.

Compilation flags:
    static

Template:
    supported_url_archive(URL)
Mode and number of proofs:

supported_url_archive(+atom) - zero_or_one

---

decode_url_spaces/2

Decodes encoded spaces (%20) in URLs to spaces.

Compilation flags:
    static

Template:
    decode_url_spaces(URL,Decoded)
Mode and number of proofs:
    decode_url_spaces(+atom,-atom) - one

Public predicates

list/0

Prints a list of all defined registries, including how defined (git, archive, or directory) and if they are pinned.

Compilation flags:
    static

Mode and number of proofs:
    list - one

describe/1

Prints all registry entries.

Compilation flags:
    static

Template:
    describe(Registry)
Mode and number of proofs:
    describe(+atom) - one

Exceptions:
    Registry is a variable:
        instantiation_error
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)

defined/4

Enumerates by backtracking all defined registries, their definition URL, how they are defined (git, archive, or directory), and if they are pinned.

Compilation flags:
    static

Template:
    defined(Registry,URL,HowDefined,Pinned)
Mode and number of proofs:
    defined(?atom,?atom,?atom,?boolean) - zero_or_more

Exceptions:
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)
    URL is neither a variable nor an atom:
        type_error(atom,URL)
    HowDefined is neither a variable nor an atom:
        type_error(atom,HowDefined)
    Pinned is neither a variable nor a boolean:
        type_error(boolean,Pinned)

add/3

Adds a new registry using the given options. Fails if the registry cannot be added or if it is already defined but not using update(true) or force(true) options. A file:// URL can be used for a local directory or archive.

Compilation flags:
  static

Template:
  add(Registry,URL,Options)
Mode and number of proofs:
  add(+atom,+atom,++list(compound)) - zero_or_one

Exceptions:
  Registry is a variable:
    instantiation_error
  Registry is neither a variable nor an atom:
    type_error(atom,Registry)
  URL is a variable:
    instantiation_error
  URL is neither a variable nor an atom:
    type_error(atom,URL)
  Options is a variable:
    instantiation_error
  Options is neither a variable nor a list:
    type_error(list,Options)
  An element Option of the list Options is a variable:
    instantiation_error
  An element Option of the list Options is neither a variable nor a compound term:
    type_error(compound,Option)
  An element Option of the list Options is a compound term but not a valid option:
    domain_error(option,Option)

Remarks:

- Registry name: Must be the URL basename when using a git URL or a local directory URL. Must also be the declared registry name in the registry specification object.

- HTTPS URLs: Must end with either a .git extension or an archive extension.

- update(Boolean) option: Update registry if already defined. Default is false. Overrides the force/1 option.

- force(Boolean) option: Force registry re-installation if already defined by first deleting the previous installation. Default is false.

- clean(Boolean) option: Clean registry archive after updating. Default is false.

- verbose(Boolean) option: Verbose adding steps. Default is false.

- downloader(Atom) option: Downloader utility. Either curl or wget. Default is curl.

- curl(Atom) option: Extra command-line options. Default is ''.

- wget(Atom) option: Extra command-line options. Default is ''.

- gpg(Atom) option: Extra command-line options. Default is ''.

- tar(Atom) option: Extra command-line options. Default is ''.

---

add/2

Adds a new registry using default options. Fails if the registry cannot be added or if it is already defined. HTTPS URLs must end with either a .git extension or an archive extension. A file:// URL can be used for a local directory or archive.

Compilation flags:
    static

Template:
    add(Registry,URL)
Mode and number of proofs:
    add(+atom,+atom) - zero_or_one

Exceptions:
    Registry is a variable:
        instantiation_error
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)
    URL is a variable:
        instantiation_error
    URL is neither a variable nor an atom:
        type_error(atom,URL)

Remarks:

- Registry name: Must be the URL basename when using a git URL or a local directory URL. Must also be the declared registry name in the registry specification object.

---

add/1

Adds a new registry using default options. Fails if the registry cannot be added or if it is already defined. HTTPS URLs must end with a .git extension or an archive extension. A file:// URL can be used for a local directory or archive.

Compilation flags:
    static

Template:
    add(URL)
Mode and number of proofs:
    add(+atom) - zero_or_one

Exceptions:
    URL is a variable:
        instantiation_error
    URL is neither a variable nor an atom:
        type_error(atom,URL)

Remarks:

- Registry name: Taken from the URL basename.

---

update/2

Updates a defined registry using the specified options. Fails if the registry is not defined.

Compilation flags:
    static

Template:
    update(Registry,Options)
Mode and number of proofs:
    update(+atom,++list(compound)) - zero_or_one

Exceptions:
    Registry is a variable:
        instantiation_error
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)

Options is a variable:
    instantiation_error
Options is neither a variable nor a list:
    type_error(list,Options)
An element Option of the list Options is a variable:
    instantiation_error
An element Option of the list Options is neither a variable nor a compound term:
    type_error(compound,Option)
An element Option of the list Options is a compound term but not a valid option:
    domain_error(option,Option)

Remarks:

- force(Boolean) option: Force update if the registry is pinned. Default is false.

- clean(Boolean) option: Clean registry archive after updating. Default is false.

- verbose(Boolean) option: Verbose updating steps. Default is false.

- downloader(Atom) option: Downloader utility. Either curl or wget. Default is curl.

- curl(Atom) option: Extra command-line options. Default is ''.

- wget(Atom) option: Extra command-line options. Default is ''.

- gpg(Atom) option: Extra command-line options. Default is ''.

- tar(Atom) option: Extra command-line options. Default is ''.

update/1

Updates a defined registry using default options. Fails if the registry is not defined.

Compilation flags:
    static

Template:
    update(Registry)
Mode and number of proofs:
    update(+atom) - zero_or_one

Exceptions:
    Registry is a variable:
        instantiation_error
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)

update/0

Updates all defined registries using default options.

Compilation flags:
    static

Mode and number of proofs:
    update - zero_or_one

---

delete/2

Deletes a registry using the specified options (if not pinned).

Compilation flags:
    static

Template:
    delete(Registry,Options)
Mode and number of proofs:
    delete(+atom,++list(compound)) - zero_or_one

Exceptions:
    Registry is a variable:
        instantiation_error
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)
    Options is a variable:
        instantiation_error
    Options is neither a variable nor a list:
        type_error(list,Options)
    An element Option of the list Options is a variable:
        instantiation_error
    An element Option of the list Options is neither a variable nor a compound term:
        type_error(compound,Option)
    An element Option of the list Options is a compound term but not a valid option:
        domain_error(option,Option)

Remarks:

- force(Boolean) option: Force deletion if the registry is pinned or there are installed registry packs. Default is false.

- clean(Boolean) option: Clean registry archive after deleting. Default is false.

- verbose(Boolean) option: Verbose deleting steps. Default is false.

- downloader(Atom) option: Downloader utility. Either curl or wget. Default is curl.

- curl(Atom) option: Extra command-line options. Default is ''.

- wget(Atom) option: Extra command-line options. Default is ''.

- gpg(Atom) option: Extra command-line options. Default is ''.

- tar(Atom) option: Extra command-line options. Default is ''.

---

delete/1

Deletes a registry using default options.

Compilation flags:
    static

Template:
    delete(Registry)
Mode and number of proofs:
    delete(+atom) - zero_or_one

Exceptions:
    Registry is a variable:
        instantiation_error
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)

---

delete/0

Deletes all registries using the force(true) option.

Compilation flags:
    static

Mode and number of proofs:
    delete - zero_or_one

---

clean/1

Cleans all registry archives. Fails if the registry is not defined.

Compilation flags:
    static

Template:
    clean(Registry)
Mode and number of proofs:
    clean(+atom) - zero_or_one

Exceptions:
    Registry is a variable:
        instantiation_error
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)

---

clean/0

Cleans all archives for all registries.

Compilation flags:
    static

Mode and number of proofs:

clean - one

---

provides/2

Enumerates by backtracking all packs provided by a registry.

Compilation flags:
    static

Template:
    provides(Registry,Pack)
Mode and number of proofs:
    provides(?atom,?atom) - zero_or_more

Exceptions:
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)
    Pack is neither a variable nor an atom:
        type_error(atom,Pack)

---

lint/1

Checks the registry specification. Fails if the registry is not defined or if linting detects errors.

Compilation flags:
    static

Template:
    lint(Registry)
Mode and number of proofs:
    lint(+atom) - zero_or_one

Exceptions:
    Registry is a variable:
        instantiation_error
    Registry is neither a variable nor an atom:
        type_error(atom,Registry)

---

lint/0

Checks all registry specifications.

Compilation flags:
    static

Mode and number of proofs:
    lint - one

Public predicates

name/1

Registry name. Preferably a valid unquoted atom.

Compilation flags:
    static

Template:
    name(Name)
Mode and number of proofs:
    name(?atom) - zero_or_one

description/1

Registry one line description.

Compilation flags:
    static

Template:
    description(Description)
Mode and number of proofs:
    description(?atom) - zero_or_one

home/1

Registry home HTTPS or file URL.

Compilation flags:
    static

Template:
    home(Home)
Mode and number of proofs:
    home(?atom) - zero_or_one

clone/1

Registry git clone HTTPS URL (must end with the .git extension). Git repos should have the same name as the registry.

Compilation flags:
    static

Template:
    clone(URL)
Mode and number of proofs:
    clone(?atom) - zero_or_one

archive/1

Registry archive download HTTPS URL.

Compilation flags:
    static

Template:
    archive(URL)
Mode and number of proofs:
    archive(?atom) - zero_or_one

note/2

Table of notes per action.

Compilation flags:
    static

Template:
    note(Action,Note)

Mode and number of proofs:
note(?atom,-atom) - zero_or_more

Remarks:

- Action: Possible values are add, update, and delete. When unbound, the note apply to all actions.

- Note: Note to print when performing an action on a registry.

Public predicates

start/0

Activates the ports profiler for followup goals.

Compilation flags:
    static

Mode and number of proofs:
    start - one

stop/0

Deactivates the ports profiler.

Compilation flags:
    static

Mode and number of proofs:
    stop - one

data/0

Prints a table with all port profiling data.

Compilation flags:
    static

Mode and number of proofs:
    data - one

---

data/1

Prints a table with all port profiling data for the specified entity.

Compilation flags:
    static

Template:
    data(Entity)
Mode and number of proofs:
    data(+entity_identifier) - one

---

data/2

Prints a table with all port profiling data for the specified entity predicate (or non-terminal).

Compilation flags:
    static

Template:
    data(Entity,Predicate)
Mode and number of proofs:
    data(+entity_identifier,+predicate_indicator) - one
    data(+entity_identifier,+non_terminal_indicator) - one

---

reset/0

Resets all port profiling data.

Compilation flags:
    static

Mode and number of proofs:
    reset - one

---

reset/1

Resets all port profiling data for the specified entity.

Compilation flags:
    static

Template:
    reset(Entity)
Mode and number of proofs:
    reset(+entity_identifier) - one

---

port/5

Enumerates, by backtracking, all collected port profiling data.

Compilation flags:
    static

Template:
    port(Port,Entity,Functor,Arity,Count)
Mode and number of proofs:
    port(?atom,?entity_identifier,?atom,?integer,?integer) - zero_or_more

---

clause_location/6

Enumerates, by backtracking, all collected profiled clause location data.

Compilation flags:
    static

Template:
    clause_location(Entity,Functor,Arity,ClauseNumber,File,BeginLine)
Mode and number of proofs:
    clause_location(?entity_identifier,?atom,?integer,?integer,?atom,?integer) - zero_or_more

---

clause/5

Enumerates, by backtracking, all collected clause profiling data.

Compilation flags:
    dynamic

Template:
    clause(Entity,Functor,Arity,ClauseNumber,Count)
Mode and number of proofs:

Public predicates

empty/1

True if the queue is empty.

Compilation flags:
    static

Template:
    empty(Queue)
Mode and number of proofs:
    empty(@queue) - zero_or_one

---

head/2

Unifies Head with the first element of the queue.

Compilation flags:
    static

Template:
    head(Queue,Head)
Mode and number of proofs:
    head(+queue,?term) - zero_or_one

---

join/3

Adds the new element at the end of the queue.

Compilation flags:
    static

Template:
    join(Element,Queue,NewQueue)
Mode and number of proofs:
    join(@term,+queue,-queue) - zero_or_one

---

join_all/3

Adds the new elements at the end of the queue. The elements are added in the same order that they appear in the list.

Compilation flags:
    static

Template:
    join_all(List,Queue,NewQueue)
Mode and number of proofs:
    join_all(+list,+queue,-queue) - zero_or_one

jump/3

Adds the new element at the front of the queue.

Compilation flags:
    static

Template:
    jump(Element,Queue,NewQueue)
Mode and number of proofs:
    jump(@term,+queue,-queue) - zero_or_one

jump_all/3

Adds the new elements at the front of the queue. The last element in the list will be at the front of the queue.

Compilation flags:
    static

Template:

jump_all(Elements,Queue,NewQueue)

Mode and number of proofs:

jump_all(+list,+queue,-queue) - zero_or_one

jump_all_block/3

Adds the new elements as a block at the front of the queue. The first element in the list will be at the front of the queue.

Compilation flags:

static

Template:

jump_all_block(Elements,Queue,NewQueue)

Mode and number of proofs:

jump_all_block(+list,+queue,-queue) - zero_or_one

append/3

Appends two queues. The new queue will have the elements of the first queue followed by the elements of the second queue.

Compilation flags:

static

Template:

append(Queue1,Queue2,NewQueue)

Mode and number of proofs:

append(+queue,+queue,-queue) - one

length/2

Queue length.

Compilation flags:
    static

Template:
    length(Queue,Length)
Mode and number of proofs:
    length(+heap,?integer) - zero_or_one

---

serve/3

Removes the first element of the queue for service.

Compilation flags:
    static

Template:
    serve(Queue,Head,NewQueue)
Mode and number of proofs:
    serve(+queue,?term,-queue) - zero_or_one

---

as_list/2

Converts a queue to a list.

Compilation flags:
    static

Template:
    as_list(Queue,List)
Mode and number of proofs:
    as_list(+queue,-list) - one

---

map/2

Applies a closure to all elements of a queue.

Compilation flags:
    static

Template:
    map(Closure,Queue)
Meta-predicate template:
    map(1,*)
Mode and number of proofs:
    map(+callable,+queue) - zero_or_one

---

map/3

Applies a closure to all elements of a queue constructing a new queue.

Compilation flags:
    static

Template:
    map(Closure,Queue,NewQueue)
Meta-predicate template:
    map(2,*,*)
Mode and number of proofs:
    map(+callable,+queue,?queue) - zero_or_one

1.60 random

object

1.60.1 backend_random

Random number generator predicates using the backend Prolog compiler built-in random generator.

Availability:
> logtalk_load(random(loader))

Author: Paulo Moura
Version: 1:20:0
Date: 2023-11-24

Compilation flags:
> static, context_switching_calls

Implements:
> public pseudo_random_protocol

Uses:
> list

Remarks:

- Implementation: The backend Prolog compiler built-in random generator is only used for the basic random/1, get_seed/1, and set_seed/1 predicates.
- Portability: B-Prolog, CxProlog, ECLiPSe, JIProlog, Qu-Prolog, and Quintus Prolog do not provide implementations for the get_seed/1 and set_seed/1 predicates and calling these predicates simply succeed without performing any action.

Inherited public predicates:

> between/3 enumerate/2 get_seed/1 maybe/0 maybe/1 maybe/2 maybe_call/1 maybe_call/2
> member/2 permutation/2 random/1 random/3 randseq/4 randset/4 select/3 select/4
> sequence/4 set/4 set_seed/1 swap/2 swap_consecutive/2

> **See also**
>
> random, fast_random

object

1.60.2 fast_random

Fast portable random number generator predicates. Core predicates originally written by Richard O'Keefe. Based on algorithm AS 183 from Applied Statistics.

Availability:

> logtalk_load(random(loader))

Author: Paulo Moura

Version: 2:11:0
Date: 2023-11-24

Compilation flags:
    static, context_switching_calls

Implements:
    public pseudo_random_protocol
Uses:
    list

Remarks:

- Single random number generator: This object provides a faster version of the random library object but does not support being extended to define multiple random number generators.

- Randomness: Loading this object always initializes the random generator seed to the same value, thus providing a pseudo random number generator. The randomize/1 predicate can be used to initialize the seed with a random value.

Inherited public predicates:
    between/3 enumerate/2 get_seed/1 maybe/0 maybe/1 maybe/2 maybe_call/1 maybe_call/2
    member/2 permutation/2 random/1 random/3 randseq/4 randset/4 select/3 select/4
    sequence/4 set/4 set_seed/1 swap/2 swap_consecutive/2

- Public predicates
    - reset_seed/0
    - randomize/1
- Protected predicates
- Private predicates
    - seed_/3
- Operators

Public predicates

reset__seed/0

Resets the random generator seed to its default value. Use get__seed/1 and set__seed/1 instead if you need reproducibility.

Compilation flags:
    static, synchronized

Mode and number of proofs:
    reset__seed - one

randomize/1

Randomizes the random generator using a positive integer to compute a new seed. Use of a large integer is recommended. In alternative, when using a small integer argument, discard the first dozen random values.

Compilation flags:
    static, synchronized

Template:
    randomize(Seed)
Mode and number of proofs:
    randomize(+positive_integer) - one

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

seed__/3

Stores the current random generator seed values.

Compilation flags:
    dynamic

Template:
    seed_(S0,S1,S2)
Mode and number of proofs:
    seed_(-integer,-integer,-integer) - one

Operators

(none)

> ↪ See also
>
> random, backend_random

protocol

1.60.3 pseudo_random_protocol

Pseudo-random number generator protocol for seed handling predicates. These predicates are declared as synchronized when the library is compiled using a backend supporting threads.

Availability:
    logtalk_load(random(loader))

Author: Paulo Moura
Version: 1:0:0
Date: 2021-02-21

Compilation flags:
    static

Extends:
    public random_protocol

Remarks:
    (none)

Inherited public predicates:
    between/3 enumerate/2 maybe/0 maybe/1 maybe/2 maybe_call/1 maybe_call/2 member/2
    permutation/2 random/1 random/3 randseq/4 randset/4 select/3 select/4 sequence/4 set/4
    swap/2 swap_consecutive/2

- Public predicates
    - get_seed/1
    - set_seed/1
- Protected predicates
- Private predicates
- Operators

Public predicates

get_seed/1

Gets the current random generator seed. Seed should be regarded as an opaque ground term.

Compilation flags:
    static, synchronized

Template:
    get_seed(Seed)
Mode and number of proofs:
    get_seed(-ground) - one

set_seed/1

Sets the random generator seed to a given value returned by calling the get_seed/1 predicate.

Compilation flags:
    static, synchronized

Template:
    set_seed(Seed)
Mode and number of proofs:
    set_seed(+ground) - one

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

(no local declarations; see entity ancestors if any)

Operators

(none)

> **→ See also**
>
> random, backend_random, fast_random

object

1.60.4 random

Portable random number generator predicates. Core predicates originally written by Richard O'Keefe. Based on algorithm AS 183 from Applied Statistics.

Availability:
   logtalk_load(random(loader))

Author: Paulo Moura
Version: 2:11:0
Date: 2023-11-24

Compilation flags:
   static, context_switching_calls

Implements:
   public pseudo_random_protocol
Uses:
   list

Remarks:

- Multiple random number generators: To define multiple random number generators, simply extend this object. The derived objects must send to self the reset_seed/0 message.

- Randomness: Loading this object always initializes the random generator seed to the same value, thus providing a pseudo random number generator. The randomize/1 predicate can be used to initialize the seed with a random value.

Inherited public predicates:

between/3 enumerate/2 get_seed/1 maybe/0 maybe/1 maybe/2 maybe_call/1 maybe_call/2 member/2 permutation/2 random/1 random/3 randseq/4 randset/4 select/3 select/4 sequence/4 set/4 set_seed/1 swap/2 swap_consecutive/2

- Public predicates
  - reset_seed/0
  - randomize/1
- Protected predicates
- Private predicates
  - seed_/3
- Operators

Public predicates

reset_seed/0

Resets the random generator seed to its default value. Use get_seed/1 and set_seed/1 instead if you need reproducibility.

Compilation flags:
    static, synchronized

Mode and number of proofs:
    reset_seed - one

randomize/1

Randomizes the random generator using a positive integer to compute a new seed. Use of a large integer is recommended. In alternative, when using a small integer argument, discard the first dozen random values.

Compilation flags:
    static, synchronized

Template:
    randomize(Seed)
Mode and number of proofs:
    randomize(+positive_integer) - one

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

seed__/3

Stores the current random generator seed values.

Compilation flags:
    dynamic

Template:
    seed__(S0,S1,S2)
Mode and number of proofs:
    seed__(-integer,-integer,-integer) - one

Operators

(none)

> **➴ See also**

Public predicates

random/1

Returns a new random float value in the interval [0.0, 1.0[.

Compilation flags:
    static, synchronized

Template:
    random(Random)
Mode and number of proofs:
    random(-float) - one

between/3

Returns a new random integer in the interval [Lower, Upper]. Fails if Lower or Upper are not integers or if Lower > Upper.

Compilation flags:
     static

Template:
     between(Lower,Upper,Random)
Mode and number of proofs:
     between(+integer,+integer,-integer) - zero_or_one

---

member/2

Returns a random member of a list. Fails if the list is empty.

Compilation flags:
     static

Template:
     member(Random,List)
Mode and number of proofs:
     member(-term,+list(term)) - zero_or_one

---

select/3

Returns a random member of a list and the rest of the list. Fails if the list is empty.

Compilation flags:
     static

Template:
     select(Random,List,Rest)
Mode and number of proofs:
     select(-term,+list(term),-list(term)) - zero_or_one

select/4

Returns a random member of a list, replacing it with a new element and returning the resulting list.

Compilation flags:
    static

Template:
    select(Random,OldList,New,NewList)
Mode and number of proofs:
    select(-term,+list(term),@term,-list(term)) - zero_or_one

swap/2

Swaps two randomly selected elements of a list. Fails if the list is empty or contains a single element.

Compilation flags:
    static

Template:
    swap(OldList,NewList)
Mode and number of proofs:
    swap(-term,+list(term)) - zero_or_one

swap_consecutive/2

Swaps two randomly selected consecutive elements of a list. Fails if the list is empty or contains a single element.

Compilation flags:
    static

Template:
    swap_consecutive(OldList,NewList)

Mode and number of proofs:
    swap_consecutive(-term,+list(term)) - zero_or_one

---

enumerate/2

Enumerates the elements of a list in random order. Fails if the list is empty.

Compilation flags:
    static

Template:
    enumerate(List,Random)
Mode and number of proofs:
    enumerate(+list(term),--term) - zero_or_more

---

permutation/2

Returns a random permutation of a list.

Compilation flags:
    static, synchronized

Template:
    permutation(List,Permutation)
Mode and number of proofs:
    permutation(+list,-list) - one

---

sequence/4

Returns list of random integers of given length in random order in interval [Lower, Upper]. Fails if Length, Lower, or Upper are not integers or if Lower > Upper.

Compilation flags:
    static, synchronized

Template:
    sequence(Length,Lower,Upper,List)
Mode and number of proofs:
    sequence(+integer,+integer,+integer,-list(integer)) - zero_or_one

---

set/4

Returns ordered set of random integers of given size in interval [Lower, Upper]. Fails if Length, Lower, or Upper are not integers, if Lower > Upper, or if Length > Upper - Lower + 1.

Compilation flags:
    static, synchronized

Template:
    set(Length,Lower,Upper,Set)
Mode and number of proofs:
    set(+integer,+integer,+integer,-list(integer)) - zero_or_one

---

random/3

Returns a new random value in the interval [Lower, Upper[. Fails if Lower > Upper. Deprecated. Use between/3 for integers.

Compilation flags:
    static, synchronized

Template:
    random(Lower,Upper,Random)
Mode and number of proofs:
    random(+integer,+integer,-integer) - zero_or_one
    random(+float,+float,-float) - zero_or_one

---

randseq/4

Returns list of random values of given length in random order in interval [Lower, Upper[. Fails if Lower > Upper or if the arguments are neither integers or floats. Deprecated. Use sequence/4 for integers.

Compilation flags:
    static, synchronized

Template:
    randseq(Length,Lower,Upper,List)
Mode and number of proofs:
    randseq(+integer,+integer,+integer,-list(integer)) - zero_or_one
    randseq(+integer,+float,+float,-list(float)) - zero_or_one

randset/4

Returns ordered set of random values of given size in interval [Lower, Upper[. Fails if the arguments are neither integers or floats, Lower > Upper, or Length > Upper - Lower when arguments are integers. Deprecated. Use set/4 for integers.

Compilation flags:
    static, synchronized

Template:
    randset(Length,Lower,Upper,Set)
Mode and number of proofs:
    randset(+integer,+integer,+integer,-list(integer)) - zero_or_one
    randset(+integer,+float,+float,-list(float)) - zero_or_one

maybe/0

Succeeds or fails with equal probability.

Compilation flags:
    static

Mode and number of proofs:

maybe - zero_or_one

---

maybe/1

Succeeds with probability Probability or fails with probability 1 - Probability. Fails if Probability is not a float or is outside the interval [0.0, 1.0].

Compilation flags:
    static

Template:
    maybe(Probability)
Mode and number of proofs:
    maybe(+probability) - zero_or_one

---

maybe/2

Succeeds with probability K/N where K and N are integers satisfying the equation 0 =< K =< N. Fails otherwise.

Compilation flags:
    static

Template:
    maybe(K,N)
Mode and number of proofs:
    maybe(+non_negative_integer,+non_negative_integer) - zero_or_one

---

maybe_call/1

Calls a goal or fails without calling it with equal probability. When the goal is called, it determines if this predicate succeeds once or fails.

Compilation flags:
    static

Template:
    maybe_call(Goal)
Meta-predicate template:
    maybe_call(0)
Mode and number of proofs:
    maybe_call(+callable) - zero_or_one

---

maybe_call/2

Calls a goal or fails without calling it with probability Probability. When the goal is called, it determines if this predicate succeeds once or fails.

Compilation flags:
    static

Template:
    maybe_call(Probability,Goal)
Meta-predicate template:
    maybe_call(*,0)
Mode and number of proofs:
    maybe_call(+probability,+callable) - zero_or_one

Public predicates

file_to_codes/2

Reads a text file into a list of character codes.

Compilation flags:
    static

Template:
    file_to_codes(File,Codes)
Mode and number of proofs:

file_to_codes(+atom,-list(character_code)) - one

---

file_to_codes/3

Reads a text file into a list of character codes. The list is terminated by the given tail.

Compilation flags:
    static

Template:
    file_to_codes(File,Codes,Tail)
Mode and number of proofs:
    file_to_codes(+atom,-list(character_code),@term) - one

---

file_to_chars/2

Reads a text file into a list of characters.

Compilation flags:
    static

Template:
    file_to_chars(File,Chars)
Mode and number of proofs:
    file_to_chars(+atom,-list(character)) - one

---

file_to_chars/3

Reads a text file into a list of characters. The list is terminated by the given tail.

Compilation flags:
    static

Template:

file_to_chars(File,Chars,Tail)

Mode and number of proofs:

file_to_chars(+atom,-list(character),@term) - one

---

file_to_terms/2

Reads a text file into a list of terms.

Compilation flags:

static

Template:

file_to_terms(File,Terms)

Mode and number of proofs:

file_to_terms(+atom,-list(term)) - one

---

file_to_terms/3

Reads a text file into a list of terms. The list is terminated by the given tail.

Compilation flags:

static

Template:

file_to_terms(File,Terms,Tail)

Mode and number of proofs:

file_to_terms(+atom,-list(term),@term) - one

---

file_to_bytes/2

Reads a binary file into a list of bytes.

Compilation flags:
     static

Template:
     file_to_bytes(File,Bytes)
Mode and number of proofs:
     file_to_bytes(+atom,-list(byte)) - one

---

file_to_bytes/3

Reads a binary file into a list of bytes. The list is terminated by the given tail.

Compilation flags:
     static

Template:
     file_to_bytes(File,Bytes,Tail)
Mode and number of proofs:
     file_to_bytes(+atom,-list(byte),@term) - one

---

stream_to_codes/2

Reads a text stream into a list of character codes. Does not close the stream.

Compilation flags:
     static

Template:
     stream_to_codes(Stream,Codes)
Mode and number of proofs:
     stream_to_codes(+stream_or_alias,-list(character_code)) - one

---

stream_to_codes/3

Reads a text stream into a list of character codes. Does not close the stream. The list is terminated by the given tail.

Compilation flags:
    static

Template:
    stream_to_codes(Stream,Codes,Tail)
Mode and number of proofs:
    stream_to_codes(+stream_or_alias,-list(character_code),@term) - one

---

stream_to_chars/2

Reads a text stream into a list of characters. Does not close the stream.

Compilation flags:
    static

Template:
    stream_to_chars(Stream,Chars)
Mode and number of proofs:
    stream_to_chars(+stream_or_alias,-list(char)) - one

---

stream_to_chars/3

Reads a text stream into a list of characters. Does not close the stream. The list is terminated by the given tail.

Compilation flags:
    static

Template:
    stream_to_chars(Stream,Chars,Tail)
Mode and number of proofs:
    stream_to_chars(+stream_or_alias,-list(char),@term) - one

---

stream_to_terms/2

Reads a text stream into a list of terms. Does not close the stream.

Compilation flags:
    static

Template:
    stream_to_terms(Stream,Terms)
Mode and number of proofs:
    stream_to_terms(+stream_or_alias,-list(term)) - one

stream_to_terms/3

Reads a text stream into a list of terms. Does not close the stream. The list is terminated by the given tail.

Compilation flags:
    static

Template:
    stream_to_terms(Stream,Terms,Tail)
Mode and number of proofs:
    stream_to_terms(+stream_or_alias,-list(term),@term) - one

stream_to_bytes/2

Reads a binary stream into a list of bytes. Does not close the stream.

Compilation flags:
    static

Template:
    stream_to_bytes(Stream,Bytes)
Mode and number of proofs:

stream_to_bytes(+stream_or_alias,-list(byte)) - one

---

stream_to_bytes/3

Reads a binary stream into a list of bytes. Does not close the stream. The list is terminated by the given tail.

Compilation flags:
    static

Template:
    stream_to_bytes(Stream,Bytes,Tail)
Mode and number of proofs:
    stream_to_bytes(+stream_or_alias,-list(byte),@term) - one

---

line_to_chars/2

Reads a line from a text stream into a list of characters. Discards the end-of-line characters. Unifies Chars with end_of_file at the end of the file.

Compilation flags:
    static

Template:
    line_to_chars(Stream,Chars)
Mode and number of proofs:
    line_to_chars(+stream_or_alias,-types([atom,list(character)])) - one

---

line_to_chars/3

Reads a line from a text stream into a list of characters. Keeps the end-of-line marker normalized to the line feed control character. The list is terminated by the given tail, which is unified with the empty list at the end of the file.

Compilation flags:
    static

Template:
    line_to_chars(Stream,Chars,Tail)
Mode and number of proofs:
    line_to_chars(+stream_or_alias,-list(character),?term) - one

---

line_to_codes/2

Reads a line from a text stream into a list of character codes. Discards the end-of-line character codes. Unifies Codes with end_of_file at the end of the file.

Compilation flags:
    static

Template:
    line_to_codes(Stream,Codes)
Mode and number of proofs:
    line_to_codes(+stream_or_alias,-types([atom,list(character_code)])) - one

---

line_to_codes/3

Reads a line from a text stream into a list of character codes. Keeps the end-of-line marker normalized to the line feed control character code. The list is terminated by the given tail, which is unified with the empty list at the end of the file.

Compilation flags:
    static

Template:

line_to_codes(Stream,Codes,Tail)

Mode and number of proofs:

line_to_codes(+stream_or_alias,-list(character_code),?term) - one

---

Public predicates

recorda/3

Adds a term as the first term for the given key, returning its reference.

Compilation flags:
static

Template:
recorda(Key,Term,Reference)
Mode and number of proofs:
recorda(+recorded_database_key,+term,--recorded_database_reference) - one_or_error

Exceptions:
    Key is a variable:
        instantiation_error
    Key is neither a variable nor an atomic term or compound term:
        type_error(recorded_database_key,Key)
    Reference is a not a variable:
        uninstantiation_error(Reference)

---

recorda/2

Adds a term as the first term for the given key.

Compilation flags:
    static

Template:
    recorda(Key,Term)
Mode and number of proofs:
    recorda(+recorded_database_key,+term) - one_or_error

Exceptions:
    Key is a variable:
        instantiation_error
    Key is neither a variable nor an atomic term or compound term:
        type_error(recorded_database_key,Key)

---

recordz/3

Adds a term as the last term for the given key, returning its reference.

Compilation flags:
    static

Template:
    recordz(Key,Term,Reference)
Mode and number of proofs:
    recordz(+recorded_database_key,+term,--recorded_database_reference) - one_or_error

---

Exceptions:

    Key is a variable:

        instantiation_error

    Key is neither a variable nor an atomic term or compound term:

        type_error(recorded_database_key,Key)

    Reference is a not a variable:

        uninstantiation_error(Reference)

---

recordz/2

Adds a term as the last term for the given key.

Compilation flags:

    static

Template:

    recordz(Key,Term)

Mode and number of proofs:

    recordz(+recorded_database_key,+term) - one_or_error

Exceptions:

    Key is a variable:

        instantiation_error

    Key is neither a variable nor an atomic term or compound term:

        type_error(recorded_database_key,Key)

---

recorded/3

Enumerates, by backtracking, all record key-term pairs and their references.

Compilation flags:

    static

Template:

    recorded(Key,Term,Reference)

Mode and number of proofs:

    recorded(?recorded_database_key,?term,-recorded_database_reference) - zero_or_more

---

recorded(?recorded_database_key,?term,+recorded_database_reference) - zero_or_one

---

recorded/2

Enumerates, by backtracking, all record key-term pairs.

Compilation flags:
    static

Template:
    recorded(Key,Term)
Mode and number of proofs:
    recorded(?recorded_database_key,?term) - zero_or_more

---

erase/1

Erases the record indexed by the given reference. Fails if there is no record with the given reference.

Compilation flags:
    static

Template:
    erase(Reference)
Mode and number of proofs:
    erase(@recorded_database_reference) - zero_or_one_or_error

Exceptions:
    Reference is a variable:
        instantiation_error

---

instance/2

.

Compilation flags:
      static

Template:
      instance(Reference,Term)
Mode and number of proofs:
      instance(@recorded_database_reference,?term) - zero_or_one_or_error

Exceptions:
      Reference is a variable:
             instantiation_error

Protected predicates

(none)

Private predicates

record_/3

Records table.

Compilation flags:
      dynamic

Template:
      record_(Key,Term,Reference)
Mode and number of proofs:
      record_(?recorded_database_key,?term,?recorded_database_reference) - zero_or_more

---

reference__/1

Reference count.

Compilation flags:
    dynamic

Template:
    reference_(Reference)
Mode and number of proofs:
    reference_(?non_negative_integer) - zero_or_one

Operators

(none)

1.63 redis

object

1.63.1 redis

Redis client. Inspired by Sean Charles GNU Prolog Redis client.

Availability:
    logtalk_load(redis(loader))

Author: Paulo Moura
Version: 0:5:1
Date: 2021-12-06

Compilation flags:
    static, context_switching_calls

Provides:
    logtalk::message_tokens//2
Uses:
    list
    logtalk

Remarks:

- Command representation: Use the Redis command name as the functor of a compound term where the arguments are the command arguments.

- Valid arguments: Atoms, integers, and floats. Always use atoms instead of double-quoted "strings". This helps portability by not depending on the value of the double_quotes flag.

Inherited public predicates:
   (none)

- Public predicates
   - connect/1
   - connect/3
   - disconnect/1
   - send/3
   - console/1

- Operators

Public predicates

connect/1

Connect to a Redis server running on localhost using the default 6379 port.

Compilation flags:
   static

Template:
   connect(Connection)
Mode and number of proofs:
   connect(--ground) - one

connect/3

Connect to a Redis server running on the given host and port.

Compilation flags:
    static

Template:
    connect(Host,Port,Connection)
Mode and number of proofs:
    connect(+atom,+integer,--ground) - one

---

disconnect/1

Disconnect from a Redis server.

Compilation flags:
    static

Template:
    disconnect(Connection)
Mode and number of proofs:
    disconnect(++ground) - one

---

send/3

Sends a request to the a Redis server and returns its reply.

Compilation flags:
    static

Template:
    send(Connection,Request,Reply)
Mode and number of proofs:
    send(++ground,++callable,--callable) - one

---

console/1

Sends a request to a Redis server running on localhost at the default 6379 port and prints the reply.

Compilation flags:
    static

Template:
    console(Request)
Mode and number of proofs:
    console(++callable) - one

Public predicates

(no local declarations; see entity ancestors if any)

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

sort/2

Sorts a list in ascending order.

Compilation flags:
    static

Template:
    sort(List,Sorted)
Mode and number of proofs:
    sort(+list,-list) - one

---

partition/4

List partition in two sub-lists using a pivot.

Compilation flags:
    static

Template:

partition(List,Pivot,Lowers,Biggers)

Mode and number of proofs:

partition(+list,+nonvar,-list,-list) - one

Operators

(none)

protocol

1.64.3 setp

Set protocol.

Availability:

logtalk_load(sets(loader))

Author: Paulo Moura
Version: 1:6:0
Date: 2019-05-23

Compilation flags:

static

Dependencies:

(none)

Remarks:

(none)

Inherited public predicates:

(none)

- Public predicates
    - as_set/2
    - as_list/2
    - delete/3

Public predicates

as_set/2

Returns a set with all unique elements from the given list.

Compilation flags:
    static

Template:
    as_set(List,Set)
Mode and number of proofs:
    as_set(@list,-set) - one

as_list/2

Returns a list with all elements of the given set.

Compilation flags:
    static

Template:
    as_list(Set,List)
Mode and number of proofs:
    as_list(@set,-list) - one

delete/3

Deletes an element from a set returning the set of remaining elements.

Compilation flags:
    static

Template:
    delete(Set,Element,Remaining)
Mode and number of proofs:
    delete(+set,@term,?set) - one

disjoint/2

True if the two sets have no element in common.

Compilation flags:
    static

Template:
    disjoint(Set1,Set2)
Mode and number of proofs:

disjoint(+set,+set) - zero_or_one

---

equal/2

True if the two sets are equal.

Compilation flags:
    static

Template:
    equal(Set1,Set2)
Mode and number of proofs:
    equal(+set,+set) - zero_or_one

---

empty/1

True if the set is empty.

Compilation flags:
    static

Template:
    empty(Set)
Mode and number of proofs:
    empty(+set) - zero_or_one

---

insert/3

Inserts an element in a set, returning the resulting set.

Compilation flags:
    static

Template:

insert(In,Element,Out)

Mode and number of proofs:

insert(+set,+term,?set) - one

---

insert_all/3

Inserts a list of elements in a set, returning the resulting set.

Compilation flags:

static

Template:

insert_all(List,In,Out)

Mode and number of proofs:

insert_all(+list,+set,?set) - one

---

intersect/2

True if the two sets have at least one element in common.

Compilation flags:

static

Template:

intersect(Set1,Set2)

Mode and number of proofs:

intersect(+set,+set) - zero_or_one

---

intersection/3

Returns the intersection of Set1 and Set2.

Compilation flags:
    static

Template:
    intersection(Set1,Set2,Intersection)
Mode and number of proofs:
    intersection(+set,+set,?set) - zero_or_one

---

intersection/4

True if Intersection is the intersection of Set1 and Set2 and Difference is the difference between Set2 and Set1.

Compilation flags:
    static

Template:
    intersection(Set1,Set2,Intersection,Difference)
Mode and number of proofs:
    intersection(+set,+set,?set,?set) - zero_or_one

---

size/2

Number of set elements.

Compilation flags:
    static

Template:
    size(Set,Size)
Mode and number of proofs:
    size(+set,?integer) - zero_or_one

---

member/2

Element is a member of set Set.

Compilation flags:
    static

Template:
    member(Element,Set)
Mode and number of proofs:
    member(+term,+set) - zero_or_one
    member(-term,+set) - zero_or_more

memberchk/2

Checks if a term is a member of a set.

Compilation flags:
    static

Template:
    memberchk(Element,Set)
Mode and number of proofs:
    memberchk(+term,+set) - zero_or_one

powerset/2

Returns the power set of a set, represented as a list of sets.

Compilation flags:
    static

Template:
    powerset(Set,Powerset)

Mode and number of proofs:
    powerset(+set,-list) - one

---

product/3

Returns the cartesian product of two sets.

Compilation flags:
    static

Template:
    product(Set1,Set2,Product)
Mode and number of proofs:
    product(+set,+set,-set) - one

---

select/3

Selects an element from a set, returning the set of remaining elements.

Compilation flags:
    static

Template:
    select(Element,Set,Remaining)
Mode and number of proofs:
    select(?term,+set,?set) - zero_or_more

---

selectchk/3

Checks that an element can be selected from a set, returning the set of remaining elements.

Compilation flags:
    static

Template:

    selectchk(Element,Set,Remaining)

Mode and number of proofs:

    selectchk(?term,+set,?set) - zero_or_one

---

subset/2

True if Subset is a subset of Set.

Compilation flags:

    static

Template:

    subset(Subset,Set)

Mode and number of proofs:

    subset(+set,+set) - zero_or_one

---

subtract/3

True when Difference contains all and only the elements of Set1 which are not also in Set2.

Compilation flags:

    static

Template:

    subtract(Set1,Set2,Difference)

Mode and number of proofs:

    subtract(+set,+set,?set) - zero_or_one

---

symdiff/3

True if Difference is the symmetric difference of Set1 and Set2, containing all elements that are not in the sets intersection.

Compilation flags:
    static

Template:
    symdiff(Set1,Set2,Difference)
Mode and number of proofs:
    symdiff(+set,+set,?set) - zero_or_one

---

union/3

True if Union is the union of Set1 and Set2.

Compilation flags:
    static

Template:
    union(Set1,Set2,Union)
Mode and number of proofs:
    union(+set,+set,?set) - zero_or_one

---

union/4

True if Union is the union of Set1 and Set2 and Difference is the difference between Set2 and Set1.

Compilation flags:
    static

Template:
    union(Set1,Set2,Union,Difference)
Mode and number of proofs:
    union(+set,+set,?set,?set) - zero_or_one

Public predicates

(no local declarations; see entity ancestors if any)

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

arithmetic_mean/5

Auxiliary predicate for computing the arithmetic mean.

Compilation flags:
    static

Template:
    arithmetic_mean(List,Length0,Length,Sum,Mean)
Mode and number of proofs:
    arithmetic_mean(+list(number),+integer,-integer,+number,-float) - one

---

squares_and_cubes/6

Auxiliary predicate for computing the skewness.

Compilation flags:
    static

Template:

squares_and_cubes(List,Mean,Squares0,Squares,Cubes0,Cubes)
Mode and number of proofs:
    squares_and_cubes(+list(number),+float,+float,-float,+float,-float) - one

squares_and_hypers/6

Auxiliary predicate for computing the kurtosis.

Compilation flags:
    static

Template:
    squares_and_hypers(List,Mean,Squares0,Squares,Hypers0,Hypers)
Mode and number of proofs:
    squares_and_hypers(+list(number),+float,+float,-float,+float,-float) - one

variance/6

Auxiliary predicate for computing the variance.

Compilation flags:
    static

Template:
    variance(List,Length0,Length,Mean,M20,M2)
Mode and number of proofs:
    variance(+list(number),+integer,-integer,+float,+float,-float) - one

Operators

(none)

protocol

1.65.4 statisticsp

Statistical calculations over a list of numbers protocol.

Availability:

Author: Paulo Moura
Version: 1:3:0
Date: 2022-06-20

Compilation flags:
    static

Dependencies:
    (none)

Remarks:
    (none)

Inherited public predicates:
    (none)

- Public predicates
    - product/2
    - sum/2
    - min/2
    - max/2
    - min_max/3
    - range/2
    - arithmetic_mean/2
    - geometric_mean/2
    - harmonic_mean/2

Public predicates

product/2

Calculates the product of all list numbers. Fails if the list is empty.

Compilation flags:
    static

Template:
    product(List,Product)
Mode and number of proofs:
    product(+list(number),-number) - zero_or_one

sum/2

Calculates the sum of all list numbers. Fails if the list is empty.

Compilation flags:
    static

Template:
    sum(List,Sum)
Mode and number of proofs:
    sum(+list(number),-number) - zero_or_one

---

min/2

Determines the minimum value in a list of numbers. Fails if the list is empty.

Compilation flags:
    static

Template:
    min(List,Minimum)
Mode and number of proofs:
    min(+list,-number) - zero_or_one

---

max/2

Determines the list maximum value in a list of numbers. Fails if the list is empty.

Compilation flags:
    static

Template:
    max(List,Maximum)
Mode and number of proofs:
    max(+list,-number) - zero_or_one

---

min_max/3

Determines the minimum and maximum values in a list of numbers. Fails if the list is empty.

Compilation flags:
    static

Template:
    min_max(List,Minimum,Maximum)
Mode and number of proofs:
    min_max(+list(number),-number,-number) - zero_or_one

---

range/2

Range is the length of the smallest interval which contains all the numbers in List. Fails if the list is empty.

Compilation flags:
    static

Template:
    range(List,Range)
Mode and number of proofs:
    range(+list,-number) - zero_or_one

---

arithmetic_mean/2

Calculates the arithmetic mean of a list of numbers. Fails if the list is empty.

Compilation flags:
    static

Template:
    arithmetic_mean(List,Mean)
Mode and number of proofs:
    arithmetic_mean(+list(number),-float) - zero_or_one

---

geometric_mean/2

Calculates the geometric mean of a list of numbers. Fails if the list is empty.

Compilation flags:
    static

Template:
    geometric_mean(List,Mean)
Mode and number of proofs:
    geometric_mean(+list(number),-float) - zero_or_one

---

harmonic_mean/2

Calculates the harmonic mean of a list of numbers. Fails if the list is empty.

Compilation flags:
    static

Template:
    harmonic_mean(List,Mean)
Mode and number of proofs:
    harmonic_mean(+list(number),-float) - zero_or_one

---

weighted_mean/3

Calculates the weighted mean of a list of numbers. Fails if the list is empty or if the two lists have different lengths. Wights are assume to be non-negative.

Compilation flags:
    static

Template:
    weighted_mean(Weights,List,Mean)
Mode and number of proofs:
    weighted_mean(+list(number),+list(number),-float) - zero_or_one

median/2

Calculates the median of a list of numbers. Fails if the list is empty.

Compilation flags:
    static

Template:
    median(List,Median)
Mode and number of proofs:
    median(+list(number),-float) - zero_or_one

modes/2

Returns the list of modes of a list of numbers in ascending order. Fails if the list is empty.

Compilation flags:
    static

Template:
    modes(List,Modes)
Mode and number of proofs:
    modes(+list(number),-list(number)) - zero_or_one

average_deviation/3

Calculates the average absolute deviation of a list of numbers given a central tendency (e.g., mean, median, or mode). Fails if the list is empty.

Compilation flags:
    static

Template:
    average_deviation(List,CentralTendency,Deviation)

Mode and number of proofs:
  average_deviation(+list(number),+float,-float) - zero_or_one

mean_deviation/2

Calculates the mean absolute deviation of a list of numbers. Fails if the list is empty.

Compilation flags:
  static

Template:
  mean_deviation(List,Deviation)
Mode and number of proofs:
  mean_deviation(+list(number),-float) - zero_or_one

median_deviation/2

Calculates the median absolute deviation of a list of numbers. Fails if the list is empty.

Compilation flags:
  static

Template:
  median_deviation(List,Deviation)
Mode and number of proofs:
  median_deviation(+list(number),-float) - zero_or_one

standard_deviation/2

Calculates the standard deviation of a list of numbers. Fails if the list is empty.

Compilation flags:
  static

Template:
	standard_deviation(List,Deviation)
Mode and number of proofs:
	standard_deviation(+list(number),-float) - zero_or_one

---

coefficient_of_variation/2

Calculates the coefficient of variation of a list of numbers. Fails if the list is empty.

Compilation flags:
	static

Template:
	coefficient_of_variation(List,Coefficient)
Mode and number of proofs:
	coefficient_of_variation(+list(number),-float) - zero_or_one

---

relative_standard_deviation/2

Calculates the relative standard deviation of a list of numbers. Fails if the list is empty.

Compilation flags:
	static

Template:
	relative_standard_deviation(List,Percentage)
Mode and number of proofs:
	relative_standard_deviation(+list(number),-float) - zero_or_one

---

skewness/2

Calculates the (moment) skewness of a list of numbers. Fails if the list is empty.

Compilation flags:
    static

Template:
    skewness(List,Skewness)
Mode and number of proofs:
    skewness(+list(number),-float) - zero_or_one

kurtosis/2

Calculates the (excess) kurtosis of a list of numbers. Fails if the list is empty.

Compilation flags:
    static

Template:
    kurtosis(List,Kurtosis)
Mode and number of proofs:
    kurtosis(+list(number),-float) - zero_or_one

variance/2

Calculates the unbiased variance of a list of numbers. Fails if the list is empty.

Compilation flags:
    static

Template:
    variance(List,Variance)
Mode and number of proofs:
    variance(+list(number),-float) - zero_or_one

z_normalization/2

Normalizes a list of number such that for the resulting list the mean of is close to zero and the standard deviation is close to 1. Fails if the list is empty.

Compilation flags:
    static

Template:
    z_normalization(List,NormalizedList)
Mode and number of proofs:
    z_normalization(+list(number),-list(float)) - zero_or_one

---

fractile/3

Calculates the smallest value in a list of numbers such that the list elements in its fraction P are less or equal to that value (with P in the open interval (0.0, 1.0)). Fails if the list is empty.

Compilation flags:
    static

Template:
    fractile(P,List,Fractile)
Mode and number of proofs:
    fractile(+float,+list(integer),-integer) - zero_or_one
    fractile(+float,+list(float),-float) - zero_or_one

---

valid/1

Term is a closed list of numbers.

Compilation flags:
    static

Template:
    valid(Term)
Mode and number of proofs:

valid(@nonvar) - zero_or_one

Public predicates

(no local declarations; see entity ancestors if any)

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

temporary_file_/1

Logtalk session and term_io specific temporary file path.

Compilation flags:
    dynamic

Template:
    temporary_file_(Path)
Mode and number of proofs:
    temporary_file_(-atom) - one

Operators

(none)

protocol

1.66.2 term_io_protocol

Predicates for term input/output from/to atom, chars, and codes. The predicates are declared as synchronized when the library is compiled using a backend supporting threads.

Availability:
    logtalk_load(term_io(loader))

Author: Paulo Moura
Version: 1:3:0
Date: 2021-10-04

Compilation flags:
    static

Dependencies:
    (none)

Remarks:

- Portability notes: To keep calls to these library predicates portable, use only standard read/write options and specify output formats using atoms.

Inherited public predicates:
    (none)

- Public predicates
    - read_term_from_atom/3
    - read_from_atom/2
    - read_term_from_chars/3
    - read_term_from_chars/4

Public predicates

read_term_from_atom/3

Reads a term from an atom using the given read options. A period at the end of the atom is optional. Valid options are those supported by the standard read_term/3 predicate.

Compilation flags:
    static, synchronized

Template:
    read_term_from_atom(Atom,Term,Options)
Mode and number of proofs:
    read_term_from_atom(+atom,-term,+list(read_option)) - one_or_error

read_from_atom/2

Reads a term from an atom using default read options. Shorthand for read_term_from_atom(Atom,Term, []). A period at the end of the atom is optional.

Compilation flags:
    static

Template:
    read_from_atom(Atom,Term)
Mode and number of proofs:
    read_from_atom(+atom,-term) - one_or_error

---

read_term_from_chars/3

Reads a term from a list of characters using the given read options. A period at the end of the list is optional. Valid options are those supported by the standard read_term/3 predicate.

Compilation flags:
    static, synchronized

Template:
    read_term_from_chars(Chars,Term,Options)
Mode and number of proofs:
    read_term_from_chars(+list(character),-term,+list(read_option)) - one_or_error

---

read_term_from_chars/4

Reads a term from a list of characters using the given read options, also returning the remaining characters. A period at the end of the term is required. Valid options are those supported by the standard read_term/3 predicate.

Compilation flags:
    static

Template:
    read_term_from_chars(Chars,Term,Tail,Options)

Mode and number of proofs:
    read_term_from_chars(+list(character),-term,-list(character),+list(read_option)) - one_or_error

---

read_from_chars/2

Reads a term from a list of characters using default read options. Shorthand for read_term_from_chars(Chars,Term,[]). A period at the end of the list is optional.

Compilation flags:
    static

Template:
    read_from_chars(Chars,Term)
Mode and number of proofs:
    read_from_chars(+list(character),-term) - one_or_error

---

read_term_from_codes/3

Reads a term from a list of character codes using the given read options. A period at the end of the list is optional. Valid options are those supported by the standard read_term/3 predicate.

Compilation flags:
    static, synchronized

Template:
    read_term_from_codes(Codes,Term,Options)
Mode and number of proofs:
    read_term_from_codes(+list(character_code),-term,+list(read_option)) - one_or_error

---

read_term_from_codes/4

Reads a term from a list of character codes using the given read options, also returning the remaining character codes. A period at the end of the term is required. Valid options are those supported by the standard read_term/3 predicate.

Compilation flags:

> static

Template:

> read_term_from_codes(Codes,Term,Tail,Options)

Mode and number of proofs:

> read_term_from_codes(+list(character_code),-term,-list(character_code),+list(read_option)) - one_or_error

---

read_from_codes/2

Reads a term from a list of character codes using default read options. Shorthand for read_term_from_codes(Codes,Term,[]). A period at the end of the list is optional.

Compilation flags:

> static

Template:

> read_from_codes(Codes,Term)

Mode and number of proofs:

> read_from_codes(+list(character_code),-term) - one_or_error

---

write_term_to_atom/3

Writes a term to an atom using the given write options. Valid options are those supported by the standard write_term/3 predicate.

Compilation flags:

> static, synchronized

Template:

write_term_to_atom(Term,Atom,Options)
Mode and number of proofs:
    write_term_to_atom(@term,-atom,+list(write_option)) - one

write_to_atom/2

Writes a term to an atom using default write options. Shorthand for write_term_to_atom(Term,Atom,[]).

Compilation flags:
    static

Template:
    write_to_atom(Term,Atom)
Mode and number of proofs:
    write_to_atom(@term,-atom) - one

write_term_to_chars/3

Writes a term to a list of characters using the given write options. Shorthand for write_term_to_chars(Term, Chars,[],Options). Valid options are those supported by the standard write_term/3 predicate.

Compilation flags:
    static

Template:
    write_term_to_chars(Term,Chars,Options)
Mode and number of proofs:
    write_term_to_chars(@term,-list(character),+list(write_option)) - one

write_term_to_chars/4

Writes a term to a list of characters with the given tail using the given write options. Valid options are those supported by the standard write_term/3 predicate.

Compilation flags:
    static, synchronized

Template:
    write_term_to_chars(Term,Chars,Tail,Options)
Mode and number of proofs:
    write_term_to_chars(@term,-list(character),@term,+list(write_option)) - one

---

write_to_chars/2

Writes a term to a list of characters using default write options. Shorthand for write_term_to_chars(Term, Chars,[],[]).

Compilation flags:
    static

Template:
    write_to_chars(Term,Chars)
Mode and number of proofs:
    write_to_chars(@term,-list(character)) - one

---

write_term_to_codes/3

Writes a term to a list of character codes using the given write options. Shorthand for write_term_to_codes(Term,Codes,[],Options). Valid options are those supported by the standard write_term/3 predicate.

Compilation flags:
    static

Template:
    write_term_to_codes(Term,Codes,Options)

Mode and number of proofs:
    write_term_to_codes(@term,-list(character_code),+list(write_option)) - one

---

write_term_to_codes/4

Writes a term to a list of character codes with the given tail using the given write options. Valid options are those supported by the standard write_term/3 predicate.

Compilation flags:
    static, synchronized

Template:
    write_term_to_codes(Term,Codes,Tail,Options)
Mode and number of proofs:
    write_term_to_codes(@term,-list(character_code),@term,+list(write_option)) - one

---

write_to_codes/2

Writes a term to a list of character codes using default write options. Shorthand for write_term_to_chars(Term,Codes,[],[]).

Compilation flags:
    static

Template:
    write_to_codes(Term,Codes)
Mode and number of proofs:
    write_to_codes(@term,-list(character_code)) - one

---

format_to_atom/3

Writes a list of arguments to an atom using the given format (specified as in the de facto standard format/2 predicate).

Compilation flags:
    static, synchronized

Template:
    format_to_atom(Format,Arguments,Atom)
Mode and number of proofs:
    format_to_atom(@atom,+list(term),-atom) - one

---

format_to_chars/3

Writes a list of arguments to a list of characters using the given format (specified as in the de facto standard format/2 predicate). Shorthand for format_to_chars(Format,Arguments,Chars,[]).

Compilation flags:
    static

Template:
    format_to_chars(Format,Arguments,Chars)
Mode and number of proofs:
    format_to_chars(@term,+list(term),-list(character)) - one

---

format_to_chars/4

Writes a term to a list of characters with the given tail using the given format (specified as in the de facto standard format/2 predicate).

Compilation flags:
    static, synchronized

Template:
    format_to_chars(Format,Arguments,Chars,Tail)
Mode and number of proofs:

format__to__chars(@term,+list(term),-list(character),@term) - one

format__to__codes/3

Writes a list of arguments to a list of character codes using the given format (specified as in the de facto standard format/2 predicate). Shorthand for format_to_codes(Format,Arguments,Codes,[]).

Compilation flags:
    static

Template:
    format__to__codes(Format,Arguments,Codes)
Mode and number of proofs:
    format__to__codes(@term,+list(term),-list(character__code)) - one

format__to__codes/4

Writes a list of arguments to a list of character codes with the given tail using the given format (specified as in the de facto standard format/2 predicate).

Compilation flags:
    static, synchronized

Template:
    format__to__codes(Format,Arguments,Codes,Tail)
Mode and number of proofs:
    format__to__codes(@term,+list(term),-list(character__code),@term) - one

with_output_to/2

Calls a goal deterministically with output to the given format: atom(Atom), chars(Chars), chars(Chars,Tail), codes(Codes), or codes(Codes,Tail).

Compilation flags:
    static, synchronized

Template:
    with_output_to(Output,Goal)
Meta-predicate template:
    with_output_to(*,0)
Mode and number of proofs:
    with_output_to(+compound,+callable) - zero_or_one

1.67 timeout

object

1.67.1 timeout

Predicates for calling goal with a time limit.

Availability:
    logtalk_load(timeout(loader))

Author: Paulo Moura
Version: 0:10:0

Date: 2022-06-15

Compilation flags:
    static, context_switching_calls

Dependencies:
    (none)

Remarks:

- Supported backend Prolog systems: B-Prolog, ECLiPSe, XVM, SICStus Prolog, SWI-Prolog, Trealla Prolog, XSB, and YAP.

Inherited public predicates:
    (none)

- Public predicates

- Protected predicates
- Private predicates
- Operators

Public predicates

call_with_timeout/2

Calls a goal deterministically with the given time limit (expressed in seconds). Note that the goal may fail or throw an error before exhausting the time limit.

Compilation flags:
    static

Template:
    call_with_timeout(Goal,Timeout)
Meta-predicate template:
    call_with_timeout(0,*)
Mode and number of proofs:
    call_with_timeout(+callable,+positive_number) - zero_or_one

---

Exceptions:

>Goal does not complete in the allowed time:
>>timeout(Goal)

---

call_with_timeout/3

Calls a goal deterministically with the given time limit (expressed in seconds) returning a reified result: true, fail, timeout, or error(Error).

Compilation flags:

>static

Template:

>call_with_timeout(Goal,Timeout,Result)

Meta-predicate template:

>call_with_timeout(0,*,*)

Mode and number of proofs:

>call_with_timeout(+callable,+positive_number,--atom) - one

Public predicates

read_file/3

Reads a TSV file saving the data as clauses for the specified object predicate. Fails if the file cannot be parsed.

Compilation flags:
   static

Template:
   read_file(File,Object,Predicate)
Mode and number of proofs:
   read_file(+atom,+object_identifier,+predicate_indicator) - zero_or_one

Exceptions:
   File is a variable:
      instantiation_error
   File is neither a variable nor an atom:
      type_error(atom,File)
   File is an atom but not an existing file:
      existence_error(file,File)
   File is an existing file but cannot be opened for reading:
      permission_error(open,source_sink,File)
   Object is a variable:
      instantiation_error
   Object is neither a variable nor an object identifier:
      type_error(object_identifier,Object)
   Object is a valid object identifier but not an existing object:
      existence_error(object,Object)
   Predicate is a variable:
      instantiation_error
   Predicate is neither a variable nor a predicate indicator:
      type_error(predicate_indicator,Predicate)
   Predicate is a valid predicate indicator but not an existing public predicate:
      existence_error(predicate,Predicate)

read_stream/3

Reads a TSV stream saving the data as clauses for the specified object predicate. Fails if the stream cannot be parsed.

Compilation flags:
	static

Template:
	read_stream(Stream,Object,Predicate)
Mode and number of proofs:
	read_stream(+stream_or_alias,+object_identifier,+predicate_indicator) - zero_or_one

Exceptions:
	Stream is a variable:
		instantiation_error
	Stream is neither a variable nor a stream-term or alias:
		domain_error(stream_or_alias,Stream)
	Stream is not an open stream:
		existence_error(stream,Stream)
	Stream is an output stream:
		permission_error(input,stream,Stream)
	Stream is a binary stream:
		permission_error(input,binary_stream,Stream)
	Object is a variable:
		instantiation_error
	Object is neither a variable nor an object identifier:
		type_error(object_identifier,Object)
	Object is a valid object identifier but not an existing object:
		existence_error(object,Object)
	Predicate is a variable:
		instantiation_error
	Predicate is neither a variable nor a predicate indicator:
		type_error(predicate_indicator,Predicate)
	Predicate is a valid predicate indicator but not an existing public predicate:
		existence_error(predicate,Predicate)

read_file/2

Reads a TSV file returning the data as a list of rows, each row a list of fields. Fails if the file cannot be parsed.

Compilation flags:
    static

Template:
    read_file(File,Rows)
Mode and number of proofs:
    read_file(+atom,-list(list)) - zero_or_one

Exceptions:
    File is a variable:
        instantiation_error
    File is neither a variable nor an atom:
        type_error(atom,File)
    File is an atom but not an existing file:
        existence_error(file,File)
    File is an existing file but cannot be opened for reading:
        permission_error(open,source_sink,File)

read_stream/2

Reads a TSV stream returning the data as a list of rows, each row a list of fields. Fails if the stream cannot be parsed.

Compilation flags:
    static

Template:
    read_stream(Stream,Rows)
Mode and number of proofs:
    read_stream(+stream_or_alias,-list(list)) - zero_or_one

Exceptions:
    Stream is a variable:
        instantiation_error
    Stream is neither a variable nor a stream-term or alias:

> > domain_error(stream_or_alias,Stream)
>
> Stream is not an open stream:
>
> > existence_error(stream,Stream)
>
> Stream is an output stream:
>
> > permission_error(input,stream,Stream)
>
> Stream is a binary stream:
>
> > permission_error(input,binary_stream,Stream)

---

read_file_by_line/3

Reads a TSV file saving the data as clauses for the specified object predicate. The file is read line by line. Fails if the file cannot be parsed.

Compilation flags:

> static

Template:

> read_file_by_line(File,Object,Predicate)

Mode and number of proofs:

> read_file_by_line(+atom,+object_identifier,+predicate_indicator) - zero_or_one

Exceptions:

> File is a variable:
>
> > instantiation_error
>
> File is neither a variable nor an atom:
>
> > type_error(atom,File)
>
> File is an atom but not an existing file:
>
> > existence_error(file,File)
>
> File is an existing file but cannot be opened for reading:
>
> > permission_error(open,source_sink,File)
>
> Object is a variable:
>
> > instantiation_error
>
> Object is neither a variable nor an object identifier:
>
> > type_error(object_identifier,Object)
>
> Object is a valid object identifier but not an existing object:
>
> > existence_error(object,Object)
>
> Predicate is a variable:
>
> > instantiation_error
>
> Predicate is neither a variable nor a predicate indicator:
>
> > type_error(predicate_indicator,Predicate)
>
> Predicate is a valid predicate indicator but not an existing public predicate:
>
> > existence_error(predicate,Predicate)

read_stream_by_line/3

Reads a TSV stream saving the data as clauses for the specified object predicate. The stream is read line by line. Fails if the stream cannot be parsed.

Compilation flags:
    static

Template:
    read_stream_by_line(Stream,Object,Predicate)
Mode and number of proofs:
    read_stream_by_line(+stream_or_alias,+object_identifier,+predicate_indicator) - zero_or_one

Exceptions:
    Stream is a variable:
        instantiation_error
    Stream is neither a variable nor a stream-term or alias:
        domain_error(stream_or_alias,Stream)
    Stream is not an open stream:
        existence_error(stream,Stream)
    Stream is an output stream:
        permission_error(input,stream,Stream)
    Stream is a binary stream:
        permission_error(input,binary_stream,Stream)
    Object is a variable:
        instantiation_error
    Object is neither a variable nor an object identifier:
        type_error(object_identifier,Object)
    Object is a valid object identifier but not an existing object:
        existence_error(object,Object)
    Predicate is a variable:
        instantiation_error
    Predicate is neither a variable nor a predicate indicator:
        type_error(predicate_indicator,Predicate)
    Predicate is a valid predicate indicator but not an existing public predicate:
        existence_error(predicate,Predicate)

read__file__by__line/2

Reads a TSV file returning the data as a list of rows, each row a list of fields. The file is read line by line. Fails if the file cannot be parsed.

Compilation flags:
    static

Template:
    read__file__by__line(File,Rows)
Mode and number of proofs:
    read__file__by__line(+atom,-list(list)) - zero__or__one

Exceptions:
    File is a variable:
        instantiation__error
    File is neither a variable nor an atom:
        type__error(atom,File)
    File is an atom but not an existing file:
        existence__error(file,File)
    File is an existing file but cannot be opened for reading:
        permission__error(open,source__sink,File)

---

read_stream_by_line/2

Reads a TSV stream returning the data as a list of rows, each row a list of fields. The stream is read line by line. Fails if the stream cannot be parsed.

Compilation flags:
    static

Template:
    read_stream_by_line(Stream,Rows)
Mode and number of proofs:
    read_stream_by_line(+stream_or_alias,-list(list)) - zero_or_one

Exceptions:
    Stream is a variable:
        instantiation__error
    Stream is neither a variable nor a stream-term or alias:

domain_error(stream_or_alias,Stream)

Stream is not an open stream:

existence_error(stream,Stream)

Stream is an output stream:

permission_error(input,stream,Stream)

Stream is a binary stream:

permission_error(input,binary_stream,Stream)

---

write_file/3

Writes a TSV file with the data represented by the clauses of the specified object predicate.

Compilation flags:

static

Template:

write_file(File,Object,Predicate)

Mode and number of proofs:

write_file(+atom,+object_identifier,+predicate_indicator) - one

Exceptions:

File is a variable:

instantiation_error

File is neither a variable nor an atom:

type_error(atom,File)

File is an atom but cannot be opened for writing:

permission_error(open,source_sink,File)

Object is a variable:

instantiation_error

Object is neither a variable nor an object identifier:

type_error(object_identifier,Object)

Object is a valid object identifier but not an existing object:

existence_error(object,Object)

Predicate is a variable:

instantiation_error

Predicate is neither a variable nor a predicate indicator:

type_error(predicate_indicator,Predicate)

Predicate is a valid predicate indicator but not an existing public predicate:

existence_error(predicate,Predicate)

---

write_stream/3

Writes a TSV stream with the data represented by the clauses of the specified object predicate.

Compilation flags:
> static

Template:
> write_stream(Stream,Object,Predicate)

Mode and number of proofs:
> write_stream(+stream_or_alias,+object_identifier,+predicate_indicator) - one

Exceptions:
> Stream is a variable:
>> instantiation_error
> Stream is neither a variable nor a stream-term or alias:
>> domain_error(stream_or_alias,Stream)
> Stream is not an open stream:
>> existence_error(stream,Stream)
> Stream is an input stream:
>> permission_error(output,stream,Stream)
> Stream is a binary stream:
>> permission_error(output,binary_stream,Stream)
> Object is a variable:
>> instantiation_error
> Object is neither a variable nor an object identifier:
>> type_error(object_identifier,Object)
> Object is a valid object identifier but not an existing object:
>> existence_error(object,Object)
> Predicate is a variable:
>> instantiation_error
> Predicate is neither a variable nor a predicate indicator:
>> type_error(predicate_indicator,Predicate)
> Predicate is a valid predicate indicator but not an existing public predicate:
>> existence_error(predicate,Predicate)

Public predicates

replace_sub_atom/4

Replaces all occurrences of Old by New in Input returning Output. Returns Input if Old is the empty atom. Fails when Output does not unify with the resulting atom.

Compilation flags:
    static

Template:
    replace_sub_atom(Old,New,Input,Output)
Mode and number of proofs:
    replace_sub_atom(+atom,+atom,+atom,?atom) - zero_or_one

split/3

Splits an atom at a given delimiter into a list of sub-atoms.

Compilation flags:
    static

Template:
    split(Atom,Delimiter,SubAtoms)
Mode and number of proofs:
    split(+atom,+atom,-list(atom)) - one

Protected predicates

is_ascii/1

True if the argument is an ASCII character.

Compilation flags:
    static

Template:
    is_ascii(Char)
Mode and number of proofs:
    is_ascii(+char) - zero_or_one

is_alphanumeric/1

True if the argument is an alphanumeric character.

Compilation flags:
    static

Template:
    is_alphanumeric(Char)
Mode and number of proofs:

is_alphanumeric(+char) - zero_or_one

---

is_alpha/1

True if the argument is a letter or an underscore.

Compilation flags:
    static

Template:
    is_alpha(Char)
Mode and number of proofs:
    is_alpha(+char) - zero_or_one

---

is_letter/1

True if the argument is a letter.

Compilation flags:
    static

Template:
    is_letter(Char)
Mode and number of proofs:
    is_letter(+char) - zero_or_one

---

is_bin_digit/1

True if the argument is a binary digit.

Compilation flags:
    static

Template:

is_bin_digit(Char)
Mode and number of proofs:
   is_bin_digit(+char) - zero_or_one

---

is_octal_digit/1

True if the argument is an octal digit.

Compilation flags:
   static

Template:
   is_octal_digit(Char)
Mode and number of proofs:
   is_octal_digit(+char) - zero_or_one

---

is_dec_digit/1

True if the argument is a decimal digit.

Compilation flags:
   static

Template:
   is_dec_digit(Char)
Mode and number of proofs:
   is_dec_digit(+char) - zero_or_one

---

is_hex_digit/1

True if the argument is an hexadecimal digit.

Compilation flags:
    static

Template:
    is_hex_digit(Char)
Mode and number of proofs:
    is_hex_digit(+char) - zero_or_one

---

is_lower_case/1

True if the argument is a lower case letter.

Compilation flags:
    static

Template:
    is_lower_case(Char)
Mode and number of proofs:
    is_lower_case(+char) - zero_or_one

---

is_upper_case/1

True if the argument is a upper case letter.

Compilation flags:
    static

Template:
    is_upper_case(Char)
Mode and number of proofs:
    is_upper_case(+char) - zero_or_one

---

is_vowel/1

True if the argument is a vowel.

Compilation flags:
    static

Template:
    is_vowel(Char)
Mode and number of proofs:
    is_vowel(+char) - zero_or_one

---

is_white_space/1

True if the argument is a white space character (a space or a tab) inside a line of characters.

Compilation flags:
    static

Template:
    is_white_space(Char)
Mode and number of proofs:
    is_white_space(+char) - zero_or_one

---

is_layout/1

True if the argument is a layout character.

Compilation flags:
    static

Template:
    is_layout(Char)
Mode and number of proofs:
    is_layout(+char) - zero_or_one

---

is_quote/1

True if the argument is a quote character.

Compilation flags:
    static

Template:
    is_quote(Char)
Mode and number of proofs:
    is_quote(+char) - zero_or_one

---

is_punctuation/1

True if the argument is a sentence punctuation character.

Compilation flags:
    static

Template:
    is_punctuation(Char)
Mode and number of proofs:
    is_punctuation(+char) - zero_or_one

---

is_period/1

True if the argument is a character that ends a sentence.

Compilation flags:
    static

Template:
    is_period(Char)
Mode and number of proofs:
    is_period(+char) - zero_or_one

---

is_control/1

True if the argument is an ASCII control character.

Compilation flags:
    static

Template:
    is_control(Char)
Mode and number of proofs:
    is_control(+char) - zero_or_one

---

is_newline/1

True if the argument is the ASCII newline character.

Compilation flags:
    static

Template:
    is_newline(Char)
Mode and number of proofs:
    is_newline(+char) - zero_or_one

---

is_end_of_line/1

True if the argument is the ASCII end-of-line character (either a carriage return or a line feed).

Compilation flags:
    static

Template:
    is_end_of_line(Char)
Mode and number of proofs:
    is_end_of_line(+char) - zero_or_one

---

parenthesis/2

Recognizes and converts between open and close parenthesis.

Compilation flags:
    static

Template:
    parenthesis(Char1,Char2)
Mode and number of proofs:
    parenthesis(?char,?char) - zero_or_more
    parenthesis(+char,?char) - zero_or_one
    parenthesis(?char,+char) - zero_or_one

---

lower_upper/2

Recognizes and converts between lower and upper case letters.

Compilation flags:
    static

Template:
    lower_upper(Char1,Char2)
Mode and number of proofs:
    lower_upper(?char,?char) - zero_or_more
    lower_upper(+char,?char) - zero_or_one
    lower_upper(?char,+char) - zero_or_one

- Public predicates
    - between/3
    - plus/3
    - succ/2
    - sequence/3
    - sequence/4
- Protected predicates
- Private predicates
- Operators

Public predicates

between/3

Returns integers in the interval defined by the two first arguments.

Compilation flags:
> static

Template:
> between(Lower,Upper,Integer)

Mode and number of proofs:
> between(+integer,+integer,+integer) - zero_or_one
> between(+integer,+integer,-integer) - zero_or_more

plus/3

Reversible integer sum. At least two of the arguments must be instantiated to integers.

Compilation flags:
    static

Template:
    plus(I,J,Sum)
Mode and number of proofs:
    plus(+integer,+integer,?integer) - zero_or_one
    plus(+integer,?integer,+integer) - zero_or_one
    plus(?integer,+integer,+integer) - zero_or_one

---

succ/2

Successor of a natural number. At least one of the arguments must be instantiated to a natural number.

Compilation flags:
    static

Template:
    succ(I,J)
Mode and number of proofs:
    succ(+integer,?integer) - zero_or_one
    succ(?integer,+integer) - zero_or_one

---

sequence/3

Generates a list with the sequence of all integers in the interval [Lower,Upper]. Assumes Lower =< Upper and fails otherwise.

Compilation flags:
    static

Template:
    sequence(Lower,Upper,List)

Mode and number of proofs:
    sequence(+integer,+integer,-list(integer)) - zero_or_one

---

sequence/4

Generates a list with the sequence of integers in the interval [Lower,Upper] by Step. Assumes Lower =< Upper, Step >= 1 and fails otherwise.

Compilation flags:
    static

Template:
    sequence(Lower,Upper,Step,List)
Mode and number of proofs:
    sequence(+integer,+integer,+integer,-list(integer)) - zero_or_one

---

protocol

1.71.13 listp

List protocol.

Availability:
    logtalk_load(types(loader))

Author: Paulo Moura
Version: 1:18:0
Date: 2024-05-24

Compilation flags:
    static

Dependencies:
    (none)

Remarks:
    (none)

Inherited public predicates:
    (none)

- Public predicates
    - append/2
    - append/3

Public predicates

append/2

Appends all lists in a list of lists.

Compilation flags:
    static

Template:
    append(Lists,Concatenation)
Mode and number of proofs:
    append(+list(list),?list) - zero_or_one

append/3

Appends two lists.

Compilation flags:
    static

Template:
    append(List1,List2,List)
Mode and number of proofs:
    append(?list,?list,?list) - zero_or_more

---

delete/3

Deletes from a list all occurrences of an element returning the list of remaining elements. Uses ==/2 for element comparison.

Compilation flags:
    static

Template:
    delete(List,Element,Remaining)
Mode and number of proofs:
    delete(@list,@term,?list) - one

---

delete_matches/3

Deletes all matching elements from a list, returning the list of remaining elements. Uses =/2 for element comparison.

Compilation flags:
    static

Template:
    delete_matches(List,Element,Remaining)
Mode and number of proofs:
    delete_matches(@list,@term,?list) - one

empty/1

True if the argument is an empty list.

Compilation flags:
    static

Template:
    empty(List)
Mode and number of proofs:
    empty(@list) - zero_or_one

flatten/2

Flattens a list of lists into a list.

Compilation flags:
    static

Template:
    flatten(List,Flatted)
Mode and number of proofs:
    flatten(+list,-list) - one

hamming_distance/3

Calculates the Hamming distance between two lists (using equality to compare list elements). Fails if the two lists are not of the same length.

Compilation flags:
    static

Template:
    hamming_distance(List1,List2,Distance)

Mode and number of proofs:
    hamming_distance(+list,+list,-integer) - zero_or_one

---

keysort/2

Sorts a list of key-value pairs in ascending order.

Compilation flags:
    static

Template:
    keysort(List,Sorted)
Mode and number of proofs:
    keysort(+list(pair),-list(pair)) - one

---

last/2

List last element (if it exists).

Compilation flags:
    static

Template:
    last(List,Last)
Mode and number of proofs:
    last(?list,?term) - zero_or_more

---

length/2

List length.

Compilation flags:
    static

Template:
 length(List,Length)
Mode and number of proofs:
 length(?list,?integer) - zero_or_more

max/2

Determines the list maximum value using standard order. Fails if the list is empty.

Compilation flags:
 static

Template:
 max(List,Maximum)
Mode and number of proofs:
 max(+list,-term) - zero_or_one

member/2

Element is a list member.

Compilation flags:
 static

Template:
 member(Element,List)
Mode and number of proofs:
 member(?term,?list) - zero_or_more

memberchk/2

Checks if a term is a member of a list.

Compilation flags:
    static

Template:
    memberchk(Element,List)
Mode and number of proofs:
    memberchk(?term,?list) - zero_or_one

---

min/2

Determines the minimum value in a list using standard order. Fails if the list is empty.

Compilation flags:
    static

Template:
    min(List,Minimum)
Mode and number of proofs:
    min(+list,-term) - zero_or_one

---

msort/2

Sorts a list in ascending order (duplicated elements are not removed).

Compilation flags:
    static

Template:
    msort(List,Sorted)
Mode and number of proofs:
    msort(+list,-list) - one

---

msort/3

Sorts a list using a user-specified comparison predicate modeled on the standard compare/3 predicate (duplicated elements are not removed).

Compilation flags:
    static

Template:
    msort(Closure,List,Sorted)
Meta-predicate template:
    msort(3,*,*)
Mode and number of proofs:
    msort(+callable,+list,-list) - one

---

nextto/3

X and Y are consecutive elements in List.

Compilation flags:
    static

Template:
    nextto(X,Y,List)
Mode and number of proofs:
    nextto(?term,?term,?list) - zero_or_more

---

nth0/3

Nth element of a list (counting from zero).

Compilation flags:
    static

Template:
    nth0(Nth,List,Element)
Mode and number of proofs:

nth0(?integer,?list,?term) - zero_or_more

nth0/4

Nth element of a list (counting from zero). Rest is a list of all the other elements. Can be used to either select the nth element of List or to insert an element before the nth element in Rest.

Compilation flags:
    static

Template:
    nth0(Nth,List,Element,Rest)
Mode and number of proofs:
    nth0(?integer,?list,?term,?list) - zero_or_more

nth1/3

Nth element of a list (counting from one).

Compilation flags:
    static

Template:
    nth1(Nth,List,Element)
Mode and number of proofs:
    nth1(?integer,?list,?term) - zero_or_more

nth1/4

Nth element of a list (counting from one). Rest is a list of all the other elements. Can be used to either select the nth element of List or to insert an element before the nth element in Rest.

Compilation flags:
    static

Template:
    nth1(Nth,List,Element,Rest)
Mode and number of proofs:
    nth1(?integer,?list,?term,?list) - zero_or_more

---

sequential_occurrences/2

Counts the number of sequential occurrences of each List element, unifying Occurrences with a list of Element-Count pairs. Uses term equality for element comparison.

Compilation flags:
    static

Template:
    sequential_occurrences(List,Occurrences)
Mode and number of proofs:
    sequential_occurrences(@list,-list(pair(term,positive_integer))) - one

---

sequential_occurrences/3

Counts the number of sequential occurrences of each List element, unifying Occurrences with a list of Element-Count pairs. Uses Closure for element comparison.

Compilation flags:
    static

Template:
    sequential_occurrences(List,Closure,Occurrences)
Mode and number of proofs:
    sequential_occurrences(@list,@callable,-list(pair(term,positive_integer))) - one

---

occurrences/2

Counts the number of occurrences of each List element, unifying Occurrences with a sorted list of Element-Count pairs. Uses term equality for element comparison.

Compilation flags:
    static

Template:
    occurrences(List,Occurrences)
Mode and number of proofs:
    occurrences(@list,-list(pair(term,positive_integer))) - one

---

occurrences/3

Counts the number of occurrences of each List element, unifying Occurrences with a sorted list of Element-Count pairs. Uses Closure for element comparison.

Compilation flags:
    static

Template:
    occurrences(List,Closure,Occurrences)
Meta-predicate template:
    occurrences(*,2,*)
Mode and number of proofs:
    occurrences(@list,@callable,-list(pair(term,positive_integer))) - one

---

partition/5

Partitions a list in lists with values less, equal, and greater than a given value (using standard order).

Compilation flags:
    static

Template:
    partition(List,Value,Less,Equal,Greater)

Mode and number of proofs:
    partition(+list,+number,-list,-list,-list) - one

---

permutation/2

The two lists are a permutation of the same list.

Compilation flags:
    static

Template:
    permutation(List,Permutation)
Mode and number of proofs:
    permutation(?list,?list) - zero_or_more

---

prefix/2

Prefix is a prefix of List.

Compilation flags:
    static

Template:
    prefix(Prefix,List)
Mode and number of proofs:
    prefix(?list,+list) - zero_or_more

---

prefix/3

Prefix is a prefix of length Length of List.

Compilation flags:
    static

Template:
      prefix(Prefix,Length,List)
Mode and number of proofs:
      prefix(?list,+integer,+list) - zero_or_one
      prefix(?list,-integer,+list) - zero_or_more

---

proper_prefix/2

Prefix is a proper prefix of List.

Compilation flags:
      static

Template:
      proper_prefix(Prefix,List)
Mode and number of proofs:
      proper_prefix(?list,+list) - zero_or_more

---

proper_prefix/3

Prefix is a proper prefix of length Length of List.

Compilation flags:
      static

Template:
      proper_prefix(Prefix,Length,List)
Mode and number of proofs:
      proper_prefix(?list,+integer,+list) - zero_or_one
      proper_prefix(?list,-integer,+list) - zero_or_more

---

remove_duplicates/2

Removes duplicated list elements using equality (==/2) for comparison and keeping the left-most element when repeated.

Compilation flags:
    static

Template:
    remove_duplicates(List,Set)
Mode and number of proofs:
    remove_duplicates(+list,-list) - one

---

reverse/2

Reverses a list.

Compilation flags:
    static

Template:
    reverse(List,Reversed)
Mode and number of proofs:
    reverse(+list,?list) - zero_or_one
    reverse(?list,+list) - zero_or_one
    reverse(-list,-list) - one_or_more

---

same_length/2

The two lists have the same length.

Compilation flags:
    static

Template:
    same_length(List1,List2)
Mode and number of proofs:

same_length(+list,?list) - zero_or_one
same_length(?list,+list) - zero_or_one
same_length(-list,-list) - one_or_more

---

same_length/3

The two lists have the same length.

Compilation flags:
    static

Template:
    same_length(List1,List2,Length)
Mode and number of proofs:
    same_length(+list,?list,?integer) - zero_or_one
    same_length(?list,+list,?integer) - zero_or_one
    same_length(-list,-list,-integer) - one_or_more

---

select/3

Selects an element from a list, returning the list of remaining elements.

Compilation flags:
    static

Template:
    select(Element,List,Remaining)
Mode and number of proofs:
    select(?term,?list,?list) - zero_or_more

---

selectchk/3

Checks that an element can be selected from a list, returning the list of remaining elements.

Compilation flags:
    static

Template:
    selectchk(Element,List,Remaining)
Mode and number of proofs:
    selectchk(?term,?list,?list) - zero_or_one

---

select/4

Selects an element from a list, replacing it by a new element and returning the resulting list.

Compilation flags:
    static

Template:
    select(Old,OldList,New,NewList)
Mode and number of proofs:
    select(?term,?list,?term,?list) - zero_or_more

---

selectchk/4

Checks that an element from a list can be replaced by a new element, returning the resulting list.

Compilation flags:
    static

Template:
    selectchk(Old,OldList,New,NewList)
Mode and number of proofs:
    selectchk(?term,?list,?term,?list) - zero_or_one

---

sort/2

Sorts a list in ascending order (duplicated elements are removed).

Compilation flags:
    static

Template:
    sort(List,Sorted)
Mode and number of proofs:
    sort(+list,-list) - one

---

sort/3

Sorts a list using a user-specified comparison predicate modeled on the standard compare/3 predicate (duplicated elements are removed).

Compilation flags:
    static

Template:
    sort(Closure,List,Sorted)
Meta-predicate template:
    sort(3,*,*)
Mode and number of proofs:
    sort(+callable,+list,-list) - one

---

sort/4

Sorts a list using the given key and order. Uses the standard term comparison operators for the order. The key selects the argument in each element in the list to use for comparisons. A key value of zero uses the whole element for comparisons.

Compilation flags:
    static

Template:

sort(Key,Order,List,Sorted)

Mode and number of proofs:

sort(+non_negative_integer,+atom,+list,-list) - one

Remarks:

- Removing duplicates: Use one of the @< or @> orders.
- Keeping duplicates: Use one of the @=< or @>= orders.
- Sorting in ascending order: Use one of the @< or @=< orders.
- Sorting in descending order: Use one of the @> or @>= orders.

split/4

Splits a list into sublists of a given length. Also returns a list with the remaining elements. Fails if the length is zero or negative.

Compilation flags:

static

Template:

split(List,Length,Sublists,Remaining)

Mode and number of proofs:

split(+list,+integer,-list(list),-list) - zero_or_one

sublist/2

The first list is a sublist of the second.

Compilation flags:

static

Template:

sublist(Sublist,List)

Mode and number of proofs:

sublist(?list,+list) - zero_or_more

subsequence/3

List is an interleaving of Subsequence and Remaining. Element order is preserved.

Compilation flags:
    static

Template:
    subsequence(List,Subsequence,Remaining)
Mode and number of proofs:
    subsequence(?list,?list,?list) - zero_or_more

---

subsequence/4

Generates subsequences of a given length from a list. Also returns the remaining elements. Element order is preserved.

Compilation flags:
    static

Template:
    subsequence(List,Length,Subsequence,Remaining)
Mode and number of proofs:
    subsequence(+list,+integer,?list,?list) - zero_or_more

---

substitute/4

Substitutes all occurrences of Old in List by New, returning NewList. Uses term equality for element comparison.

Compilation flags:
    static

Template:
    substitute(Old,List,New,NewList)
Mode and number of proofs:
    substitute(@term,@list,@term,-list) - one

subtract/3

Removes all elements in the second list from the first list, returning the list of remaining elements.

Compilation flags:
    static

Template:
    subtract(List,Elements,Remaining)
Mode and number of proofs:
    subtract(+list,+list,-list) - one

suffix/2

Suffix is a suffix of List.

Compilation flags:
    static

Template:
    suffix(Suffix,List)
Mode and number of proofs:
    suffix(?list,+list) - zero_or_more

suffix/3

Suffix is a suffix of length Length of List.

Compilation flags:
    static

Template:
    suffix(Suffix,Length,List)
Mode and number of proofs:

suffix(?list,+integer,+list) - zero_or_one
suffix(?list,-integer,+list) - zero_or_more

---

proper_suffix/2

Suffix is a proper suffix of List.

Compilation flags:
    static

Template:
    proper_suffix(Suffix,List)
Mode and number of proofs:
    proper_suffix(?list,+list) - zero_or_more

---

proper_suffix/3

Suffix is a proper suffix of length Length of List.

Compilation flags:
    static

Template:
    proper_suffix(Suffix,Length,List)
Mode and number of proofs:
    proper_suffix(?list,+integer,+list) - zero_or_one
    proper_suffix(?list,-integer,+list) - zero_or_more

---

take/3

Takes the first N elements of a list. Fails if the list have fewer than N elements.

Compilation flags:
    static

Template:
    take(N,List,Elements)
Mode and number of proofs:
    take(+integer,+list,-list) - zero_or_one

---

drop/3

Drops the first N elements of a list. Fails if the list have fewer than N elements.

Compilation flags:
    static

Template:
    drop(N,List,Remaining)
Mode and number of proofs:
    drop(+integer,+list,-list) - zero_or_one

Public predicates

approximately_equal/2

Compares two numbers for approximate equality given the epsilon arithmetic constant value using the de facto standard formula abs(Number1 - Number2) =< max(abs(Number1), abs(Number2)) * epsilon. No type-checking.

Compilation flags:
    static

Template:
    approximately_equal(Number1,Number2)
Mode and number of proofs:
    approximately_equal(+number,+number) - zero_or_one

approximately_equal/3

Compares two numbers for approximate equality given a user-defined epsilon value using the de facto standard formula abs(Number1 - Number2) =< max(abs(Number1), abs(Number2)) * Epsilon. No type-checking.

Compilation flags:
    static

Template:

approximately_equal(Number1,Number2,Epsilon)

Mode and number of proofs:

approximately_equal(+number,+number,+number) - zero_or_one

Remarks:

- Epsilon range: Epsilon should be the epsilon arithmetic constant value or a small multiple of it. Only use a larger value if a greater error is expected.

- Comparison with essential equality: For the same epsilon value, approximate equality is weaker requirement than essential equality.

---

essentially_equal/3

Compares two numbers for essential equality given an epsilon value using the de facto standard formula abs(Number1 - Number2) =< min(abs(Number1), abs(Number2)) * Epsilon. No type-checking.

Compilation flags:

static

Template:

essentially_equal(Number1,Number2,Epsilon)

Mode and number of proofs:

essentially_equal(+number,+number,+number) - zero_or_one

Remarks:

- Comparison with approximate equality: For the same epsilon value, essential equality is a stronger requirement than approximate equality.

---

tolerance_equal/4

Compares two numbers for close equality given relative and absolute tolerances using the de facto standard formula abs(Number1 - Number2) =< max(RelativeTolerance * max(abs(Number1), abs(Number2)), AbsoluteTolerance). No type-checking.

Compilation flags:

static

Template:

tolerance_equal(Number1,Number2,RelativeTolerance,AbsoluteTolerance)

Mode and number of proofs:
    tolerance_equal(+number,+number,+number,+number) - zero_or_one

---

=~= / 2

Compares two floats (or lists of floats) for approximate equality using 100*epsilon for the absolute error and, if that fails, 99.999% accuracy for the relative error. Note that these precision values may not be adequate for all cases. No type-checking.

Compilation flags:
    static

Template:
    =~=(Float1,Float2)
Mode and number of proofs:
    =~=(+number,+number) - zero_or_one
    =~=(+list(number),+list(number)) - zero_or_one

Public predicates

min/2

Determines the minimum value in a list using arithmetic order. Fails if the list is empty.

Compilation flags:
    static

Template:
    min(List,Minimum)
Mode and number of proofs:
    min(+list(number),-number) - zero_or_one

---

max/2

Determines the list maximum value using arithmetic order. Fails if the list is empty.

Compilation flags:
    static

Template:
    max(List,Maximum)
Mode and number of proofs:
    max(+list(number),-number) - zero_or_one

---

min_max/3

Determines the minimum and maximum values in a list using arithmetic order. Fails if the list is empty.

Compilation flags:
    static

Template:
    min_max(List,Minimum,Maximum)
Mode and number of proofs:
    min_max(+list(number),-number,-number) - zero_or_one

---

product/2

Calculates the product of all list numbers. Fails if the list is empty.

Compilation flags:
    static

Template:
    product(List,Product)
Mode and number of proofs:
    product(+list(number),-number) - zero_or_one

sum/2

Calculates the sum of all list numbers. Returns the integer zero if the list is empty.

Compilation flags:
    static

Template:
    sum(List,Sum)
Mode and number of proofs:
    sum(+list(number),-number) - one

average/2

Calculates the average (i.e., arithmetic mean) of a list of numbers. Fails if the list is empty.

Compilation flags:
    static

Template:
    average(List,Average)
Mode and number of proofs:

average(+list(number),-float) - zero_or_one

---

median/2

Calculates the median of a list of numbers. Fails if the list is empty.

Compilation flags:
    static

Template:
    median(List,Median)
Mode and number of proofs:
    median(+list(number),-float) - zero_or_one

---

modes/2

Returns the list of modes of a list of numbers in ascending order. Fails if the list is empty.

Compilation flags:
    static

Template:
    modes(List,Modes)
Mode and number of proofs:
    modes(+list(number),-list(number)) - zero_or_one

---

euclidean_norm/2

Calculates the Euclidean norm of a list of numbers. Fails if the list is empty.

Compilation flags:
    static

Template:

euclidean_norm(List,Norm)

Mode and number of proofs:

euclidean_norm(+list(number),-float) - zero_or_one

---

chebyshev_norm/2

Calculates the Chebyshev norm of a list of numbers. Fails if the list is empty.

Compilation flags:

static

Template:

chebyshev_norm(List,Norm)

Mode and number of proofs:

chebyshev_norm(+list(integer),-integer) - zero_or_one

chebyshev_norm(+list(float),-float) - zero_or_one

---

manhattan_norm/2

Calculates the Manhattan norm of a list of numbers. Fails if the list is empty.

Compilation flags:

static

Template:

manhattan_norm(List,Norm)

Mode and number of proofs:

manhattan_norm(+list(integer),-integer) - zero_or_one

manhattan_norm(+list(float),-float) - zero_or_one

---

euclidean_distance/3

Calculates the Euclidean distance between two lists of numbers. Fails if the two lists are empty or not of the same length.

Compilation flags:
    static

Template:
    euclidean_distance(List1,List2,Distance)
Mode and number of proofs:
    euclidean_distance(+list(number),+list(number),-float) - zero_or_one

---

chebyshev_distance/3

Calculates the Chebyshev distance between two lists of numbers. Fails if the two lists are empty or not of the same length.

Compilation flags:
    static

Template:
    chebyshev_distance(List1,List2,Distance)
Mode and number of proofs:
    chebyshev_distance(+list(integer),+list(integer),-integer) - zero_or_one
    chebyshev_distance(+list(float),+list(float),-float) - zero_or_one

---

manhattan_distance/3

Calculates the Manhattan distance between two lists of numbers. Fails if the two lists are empty or not of the same length.

Compilation flags:
    static

Template:
    manhattan_distance(List1,List2,Distance)

Mode and number of proofs:
>   manhattan_distance(+list(integer),+list(integer),-integer) - zero_or_one
>   manhattan_distance(+list(float),+list(float),-float) - zero_or_one

---

scalar_product/3

Calculates the scalar product of two lists of numbers. Fails if the two lists are empty or not of the same length.

Compilation flags:
>   static

Template:
>   scalar_product(List1,List2,Product)

Mode and number of proofs:
>   scalar_product(+list(integer),+list(integer),-integer) - zero_or_one
>   scalar_product(+list(float),+list(float),-float) - zero_or_one

---

normalize_range/2

Normalizes a list of numbers into the [0.0,1.0] range. Caller must handle arithmetic exceptions if the input list if not normalizable.

Compilation flags:
>   static

Template:
>   normalize_range(List,NormalizedList)

Mode and number of proofs:
>   normalize_range(+list(number),-list(float)) - one

---

normalize_range/4

Normalizes a list of numbers into the given range. Caller must handle arithmetic exceptions if the input list if not normalizable.

Compilation flags:
    static

Template:
    normalize_range(List,Minimum,Maximum,NormalizedList)
Mode and number of proofs:
    normalize_range(+list(number),+number,+number,-list(float)) - one

---

normalize_unit/2

Normalizes a list of numbers returning its unit vector (i.e., a list with Euclidean norm equal to one). Caller must handle arithmetic exceptions if the input list if not normalizable.

Compilation flags:
    static

Template:
    normalize_unit(List,NormalizedList)
Mode and number of proofs:
    normalize_unit(+list(number),-list(float)) - one

---

normalize_scalar/2

Normalizes a list of numbers such that the sum of all numbers is equal to one. Caller must handle arithmetic exceptions if the input list if not normalizable.

Compilation flags:
    static

Template:
    normalize_scalar(List,NormalizedList)
Mode and number of proofs:

normalize_scalar(+list(number),-list(float)) - one

---

rescale/3

Rescales all numbers in a list by the given factor.

Compilation flags:
    static

Template:
    rescale(List,Factor,RescaledList)
Mode and number of proofs:
    rescale(+list(integer),+integer,-list(integer)) - one
    rescale(+list(number),+float,-list(float)) - one

---

least_common_multiple/2

Computes the least common multiple of a list of two or more positive integers. Fails if the list is empty or contains a single element. Fails also if any of the elements is zero. May require backend support for unbound integer arithmetic.

Compilation flags:
    static

Template:
    least_common_multiple(Integers,LeastCommonMultiple)
Mode and number of proofs:
    least_common_multiple(+list(positive_integer),-positive_integer) - zero_or_one

---

- Operators

Public predicates

keys_values/3

Converts between a list of pairs and lists of keys and values. When converting to pairs, this predicate fails if the list of keys and the list of values have different lengths.

Compilation flags:

    static

Template:

    keys_values(Pairs,Keys,Values)

Mode and number of proofs:

    keys_values(+list(pair),-list,-list) - one
    keys_values(-list(pair),+list,+list) - zero_or_one

keys/2

Returns a list of keys from a list of pairs.

Compilation flags:
    static

Template:
    keys(Pairs,Keys)
Mode and number of proofs:
    keys(+list(pair),-list) - one

---

key/2

Enumerates by backtracking all keys from a list of pairs.

Compilation flags:
    static

Template:
    key(Pairs,Key)
Mode and number of proofs:
    key(+list(pair),-term) - zero_or_more

---

values/2

Returns a list of values from a list of pairs.

Compilation flags:
    static

Template:
    values(Pairs,Values)
Mode and number of proofs:
    values(+list(pair),-list) - one

---

value/3

Returns a value addressed by the given path (a key or a list of keys in the case of nested list of pairs). Fails if path does not exist.

Compilation flags:
    static

Template:
    value(Pairs,Path,Value)
Mode and number of proofs:
    value(+list(pair),+term,-term) - zero_or_one
    value(+list(pair),+list,-term) - zero_or_one

---

transpose/2

Transposes a list of pairs by swapping each pair key and value. The relative order of the list elements is kept.

Compilation flags:
    static

Template:
    transpose(Pairs,TransposedPairs)
Mode and number of proofs:
    transpose(+list(pair),-list(pair)) - one

---

group_sorted_by_key/2

Groups pairs by key by sorting them and then constructing new pairs by grouping all values for a given key in a list. Keys are compared using equality. Relative order of values per key is kept. Resulting list of pairs is sorted by key.

Compilation flags:
    static

Template:

group_sorted_by_key(Pairs,Groups)
Mode and number of proofs:
    group_sorted_by_key(+list(pair),-list(pair)) - one

---

group_consecutive_by_key/2

Groups pairs by constructing new pairs by grouping all values for consecutive key in a list. Keys are compared using equality. The relative order of the values for the same key is kept.

Compilation flags:
    static

Template:
    group_consecutive_by_key(Pairs,Groups)
Mode and number of proofs:
    group_consecutive_by_key(+list(pair),-list(pair)) - one

---

group_by_key/2

Same as the group_sorted_by_key/2 predicate. Deprecated.

Compilation flags:
    static

Template:
    group_by_key(Pairs,Groups)
Mode and number of proofs:
    group_by_key(+list(pair),-list(pair)) - one

---

map/3

Maps a list into pairs using a closure that applies to each list element to compute its key.

Compilation flags:
    static

Template:
    map(Closure,List,Pairs)
Meta-predicate template:
    map(2,*,*)
Mode and number of proofs:
    map(@callable,+list,-list(pair)) - one

  - valid/1
  - check/1
  - variant/2
  - variables/2
  - singletons/2
  - numbervars/3
  - numbervars/1

Public predicates

depth/2

True if the depth of Term is Depth. The depth of atomic terms is zero; the depth of a compound term is one plus the maximum depth of its sub-terms.

Compilation flags:
    static

Template:
    depth(Term,Depth)

Mode and number of proofs:
    depth(@term,?integer) - zero_or_one

ground/1

True if the argument is ground. Deprecated. Use the ground/1 standard predicate instead.

Compilation flags:
    static

Template:
    ground(Term)

Mode and number of proofs:
    ground(@term) - zero_or_one

new/1

Creates a new term instance (if meaningful).

Compilation flags:
    static

Template:
    new(Term)
Mode and number of proofs:
    new(-nonvar) - zero_or_one

---

occurs/2

True if the variable occurs in the term.

Compilation flags:
    static

Template:
    occurs(Variable,Term)
Mode and number of proofs:
    occurs(@var,@term) - zero_or_one

---

subsumes/2

The first term subsumes the second term. Deprecated. Use the subsumes_term/2 standard predicate instead.

Compilation flags:
    static

Template:
    subsumes(General,Specific)
Mode and number of proofs:
    subsumes(@term,@term) - zero_or_one

---

subterm/2

The first term is a subterm of the second term.

Compilation flags:
    static

Template:
    subterm(Subterm,Term)
Mode and number of proofs:
    subterm(?term,+term) - zero_or_more

---

valid/1

Term is valid.

Compilation flags:
    static

Template:
    valid(Term)
Mode and number of proofs:
    valid(@nonvar) - zero_or_one

---

check/1

Checks if a term is valid. Throws an exception if the term is not valid.

Compilation flags:
    static

Template:
    check(Term)
Mode and number of proofs:
    check(@nonvar) - one

---

variant/2

Each term is a variant of the other (i.e., they are structurally equivalent).

Compilation flags:
    static

Template:
    variant(Term1,Term2)
Mode and number of proofs:
    variant(@term,@term) - zero_or_one

---

variables/2

Returns a list of all term variables (ordered as found when doing a depth-first, left-to-right traversal of Term). Deprecated. Use the standard term_variables/2 predicate instead.

Compilation flags:
    static

Template:
    variables(Term,List)
Mode and number of proofs:
    variables(@term,-list) - one

---

singletons/2

Returns a list of all term singleton variables (ordered as found when doing a depth-first, left-to-right traversal of Term).

Compilation flags:
    static

Template:
    singletons(Term,Singletons)
Mode and number of proofs:
    singletons(@term,-list) - one

numbervars/3

Grounds a term by replacing all variables with `'$VAR'(N)` terms with N starting at From. The Next argument is unified with the next value for N after binding all variables.

Compilation flags:
    static

Template:
    numbervars(Term,From,Next)
Mode and number of proofs:
    numbervars(?term,+integer,?integer) - zero_or_one

numbervars/1

Grounds a term by replacing all variables with `'$VAR'(N)` terms with N starting at 0.

Compilation flags:
    static

Template:
    numbervars(Term)
Mode and number of proofs:
    numbervars(?term) - zero_or_one

varnumbers/3

Replaces all `'$VAR'(N)` sub-terms in a term with fresh variables for all values of N grater or equal to From. Variables in Term are shared with Copy.

Compilation flags:
    static

Template:

varnumbers(Term,From,Copy)

Mode and number of proofs:

varnumbers(@term,+integer,?term) - zero_or_one

---

varnumbers/2

Replaces all '$VAR'(N) sub-terms in a term with fresh variables for all values of N grater or equal to 0. Variables in Term are shared with Copy.

Compilation flags:

static

Template:

varnumbers(Term,Copy)

Mode and number of proofs:

varnumbers(@term,?term) - zero_or_one

object

1.71.21 type

Type checking predicates. User extensible. New types can be defined by adding clauses for the type/1 and check/2 multifile predicates.

Availability:
    logtalk_load(types(loader))

Author: Paulo Moura
Version: 2:5:1
Date: 2024-09-26

Compilation flags:
    static, context_switching_calls, complements(restrict)

Uses:
    list

Remarks:

- Logtalk specific types: entity, object, protocol, category, entity_identifier, object_identifier, protocol_identifier, category_identifier, event, predicate.

- Prolog module related types (when the backend compiler supports modules): module, module_identifier, qualified_callable.

- Prolog base types: term, var, nonvar, atomic, atom, number, integer, float, compound, callable, ground.

- Atom derived types: non_quoted_atom, non_empty_atom, boolean, character, in_character, char, operator_specifier, hex_char.

- Atom derived parametric types: atom(CharSet), atom(CharSet,Length), non_empty_atom(CharSet), character(CharSet), in_character(CharSet), char(CharSet).

- Number derived types: positive_number, negative_number, non_positive_number, non_negative_number.

- Float derived types: positive_float, negative_float, non_positive_float, non_negative_float, probability.

- Integer derived types: positive_integer, negative_integer, non_positive_integer, non_negative_integer, byte, in_byte, character_code, in_character_code, code, operator_priority, hex_code.

- Integer derived parametric types: character_code(CharSet), in_character_code(CharSet), code(CharSet).

- List types (compound derived types): list, non_empty_list, partial_list, list_or_partial_list, list(Type), list(Type,Length), list(Type,Min,Max), list(Type,Length,Min,Max), non_empty_list(Type), codes, chars.

- Difference list types (compound derived types): difference_list, difference_list(Type).

- Other compound derived types: compound(Name,Types), predicate_indicator, non_terminal_indicator, predicate_or_non_terminal_indicator, clause, grammar_rule, pair, pair(KeyType,ValueType), cyclic, acyclic.

- Stream types: stream, stream_or_alias, stream(Property), stream_or_alias(Property).

- Other types: Object::Closure, between(Type,Lower,Upper), property(Type,LambdaExpression), one_of(Type,Set), var_or(Type), ground(Type), types(Types), constrain(Type,Closure), type.

- Type predicate notes: This type is used to check for an object public predicate specified as Object::Functor/Arity.

- Type boolean notes: The two value of this type are the atoms true and false.

- Stream types notes: In the case of the stream(Property) and stream_or_alias(Property) types, Property must be a valid stream property.

- Type order notes: The three possible values of this type are the single character atoms <, =, and >.

- Type character_code notes: This type takes into account Unicode support by the backend compiler. When Unicode is supported, it distinguishes between BMP and full support. When Unicode is not supported, it assumes a byte representation for characters.

- Type Object::Closure notes: Allows calling a public object predicate for type-checking. The predicate should provide valid/2 predicate semantics and assume called with a bound argument. The Closure closure is extended with a single argument, the value to be checked.

- Type compound(Name,Types) notes: This type verifies that a compound term have the given Name and its arguments conform to Types.

- Type between(Type, Lower, Upper) notes: The type argument allows distinguishing between numbers and other types. It also allows choosing between mixed integer/float comparisons and strict float or integer comparisons. The term is type-checked before testing for interval membership.

- Type property(Type, Lambda) notes: Verifies that Term satisfies a property described using a lambda expression of the form [Parameter]>>Goal. The lambda expression is applied in the context of user. The term is type-checked before calling the goal.

- Type one_of(Type, Set) notes: For checking if a given term is an element of a set. The set is represented using a list. The term is type-checked before testing for set membership.

- Type var_or(Type) notes: Allows checking if a term is either a variable or a valid value of the given type.

- Type ground(Type) notes: Allows checking if a term is ground and a valid value of the given type.

- Type types(Types) notes: Allows checking if a term is a valid value for one of the types in a list of types.

- Type constrain(Type,Closure) notes: Allows checking if a term is a valid value for the given type and satisfies the given closure.

- Type type notes: Allows checking if a term is a valid type.

- Type qualified_callable notes: Allows checking if a term is a possibly module-qualified callable term. When the term is qualified, it also checks that the qualification modules are type correct. When the term is not qualified, its semantics are the same as the callable type.

- Design choices: The main predicates are valid/2 and check/3. These are defined using the predicate check/2. Defining clauses for check/2 instead of valid/2 gives the user full control of exception terms without requiring an additional predicate.

- Error context: The built-in execution-context method context/1 can be used to provide the calling context for errors when using the predicate check/3.

- Registering new types: New types can be registered by defining clauses for the type/1 and check/2 multifile predicates. Clauses for both predicates must have a bound first argument to avoid introducing spurious choice-points when type-checking terms.

- Meta-types: Meta-types are types that have one or more sub-type arguments. E.g. var_or(Type). The sub-types of a meta-type can be enumerated by defining a clause for the meta_type/3 multifile predicate.

- Character sets: When testing character or character code based terms (e.g., atom), it is possible to choose a character set (ascii_identifier, ascii_printable, ascii_full, byte, unicode_bmp, or unicode_full) using the parameterizable types.

- Caveats: The type argument (and any type parameterization) to the predicates is not type-checked (or checked for consistency) for performance reasons.

- Unicode limitations: Currently, correct character/code type-checking is only ensured for XVM and SWI-Prolog as other backends do not provide support for querying a Unicode code point category.

Inherited public predicates:

arbitrary/1 arbitrary/2 edge_case/2 get_seed/1 max_size/1 mutation/3 set_seed/1 shrink/3 shrink_sequence/3 shrinker/1

- Public predicates
    - type/1
    - meta_type/3
    - valid/2
    - check/3
    - check/2
- Protected predicates
- Private predicates
- Operators

Public predicates

type/1

Table of defined types. A new type can be registered by defining a clause for this predicate and adding a clause for the check/2 multifile predicate.

Compilation flags:

static, multifile

Template:

type(Type)

Mode and number of proofs:
    type(?callable) - zero_or_more

---

meta_type/3

Table of defined meta-types. A registered type that is a meta-type can be described by defining a clause for this predicate to enumerate its sub-types and optional values in case of a single sub-type.

Compilation flags:
    static, multifile

Template:
    meta_type(MetaType,SubTypes,Values)
Mode and number of proofs:
    meta_type(?callable,-list,-list) - zero_or_more

---

valid/2

True if the given term is of the specified type. Fails otherwise.

Compilation flags:
    static

Template:
    valid(Type,Term)
Mode and number of proofs:
    valid(@callable,@term) - zero_or_one

---

check/3

True if the given term is of the specified type. Throws an error otherwise using the format error(Error, Context). For the possible values of Error see the check/2 predicate.

Compilation flags:
    static

Template:
    check(Type,Term,Context)
Mode and number of proofs:
    check(@callable,@term,@term) - one_or_error

---

check/2

True if the given term is of the specified type. Throws an error otherwise. A new type can be added by defining a clause for this predicate and registering it by adding a clause for the type/1 multifile predicate.

Compilation flags:
    static, multifile

Template:
    check(Type,Term)
Meta-predicate template:
    check(::,*)
Mode and number of proofs:
    check(@callable,@term) - one_or_error

Exceptions:
    Term is not bound as required:
        instantiation_error
    Term is bound but not of the specified type:
        type_error(Type,Term)
    Term is the of the correct type but not in the specified domain:
        domain_error(Domain,Term)
    Term is the of the correct type and domain but the resource it represents does not exist:
        existence_error(Type,Term)

Public predicates

append/3

Appends two lists.

Compilation flags:
    static

Template:
    append(List1,List2,List)
Mode and number of proofs:
    append(?list,?list,?list) - zero_or_more

---

delete/3

Deletes from a list all occurrences of an element returning the list of remaining elements.

Compilation flags:
    static

Template:
    delete(List,Element,Remaining)
Mode and number of proofs:
    delete(@list,@term,?list) - one

---

empty/1

True if the argument is an empty list.

Compilation flags:
    static

Template:
    empty(List)
Mode and number of proofs:
    empty(@list) - zero_or_one

---

flatten/2

Flattens a list of lists into a list.

Compilation flags:
    static

Template:
    flatten(List,Flatted)
Mode and number of proofs:
    flatten(@list,-list) - one

---

last/2

List last element (if it exists).

Compilation flags:
    static

Template:
    last(List,Last)
Mode and number of proofs:
    last(@list,@var) - zero_or_one

---

length/2

List length.

Compilation flags:
    static

Template:
    length(List,Length)
Mode and number of proofs:
    length(@list,?integer) - zero_or_one

---

memberchk/2

Checks if a variable is a member of a list.

Compilation flags:
    static

Template:
    memberchk(Element,List)
Mode and number of proofs:
    memberchk(@var,@list) - zero_or_one

---

nextto/3

X and Y are consecutive elements in List.

Compilation flags:
    static

Template:
    nextto(X,Y,List)
Mode and number of proofs:
    nextto(@var,@var,?list) - zero_or_more

---

nth0/3

Nth element of a list (counting from zero).

Compilation flags:
    static

Template:
    nth0(Nth,List,Element)
Mode and number of proofs:
    nth0(?integer,+list,@var) - zero_or_more

---

nth0/4

Nth element of a list (counting from zero). Rest is a list of all the other elements. Can be used to either select the nth element of List or to insert an element before the nth element in Rest.

Compilation flags:
    static

Template:
    nth0(Nth,List,Element,Rest)
Mode and number of proofs:
    nth0(?integer,+list,@var,?list) - zero_or_more

---

nth1/3

Nth element of a list (counting from one).

Compilation flags:
    static

Template:
    nth1(Nth,List,Element)
Mode and number of proofs:
    nth1(?integer,+list,@var) - zero_or_more

nth1/4

Nth element of a list (counting from zero). Rest is a list of all the other elements. Can be used to either select the nth element of List or to insert an element before the nth element in Rest.

Compilation flags:
    static

Template:
    nth1(Nth,List,Element,Rest)
Mode and number of proofs:
    nth1(?integer,+list,@var,?list) - zero_or_more

permutation/2

The two lists are a permutation of the same list.

Compilation flags:
    static

Template:
    permutation(List,Permutation)
Mode and number of proofs:
    permutation(@list,@list) - zero_or_one

prefix/2

Prefix is a prefix of List.

Compilation flags:
    static

Template:
    prefix(Prefix,List)

Mode and number of proofs:
      prefix(?list,@list) - zero_or_more

---

remove_duplicates/2

Removes duplicated variables and keeping the left-most variable when repeated.

Compilation flags:
      static

Template:
      remove_duplicates(List,Set)
Mode and number of proofs:
      remove_duplicates(+list,-list) - one

---

reverse/2

Reverses a list.

Compilation flags:
      static

Template:
      reverse(List,Reversed)
Mode and number of proofs:
      reverse(@list,?list) - zero_or_one
      reverse(?list,@list) - zero_or_one
      reverse(-list,-list) - one_or_more

---

same_length/2

The two lists have the same length.

Compilation flags:
    static

Template:
    same_length(List1,List2)
Mode and number of proofs:
    same_length(@list,?list) - zero_or_one
    same_length(?list,@list) - zero_or_one
    same_length(-list,-list) - one_or_more

---

select/3

Selects an element from a list, returning the list of remaining elements.

Compilation flags:
    static

Template:
    select(Element,List,Remaining)
Mode and number of proofs:
    select(@var,?list,?list) - zero_or_more

---

sublist/2

The first list is a sublist of the second.

Compilation flags:
    static

Template:
    sublist(Sublist,List)
Mode and number of proofs:
    sublist(?list,@list) - zero_or_more

subtract/3

Removes all elements in the second list from the first list, returning the list of remaining elements.

Compilation flags:
    static

Template:
    subtract(List,Elements,Remaining)
Mode and number of proofs:
    subtract(@list,@list,-list) - one

suffix/2

Suffix is a suffix of List.

Compilation flags:
    static

Template:
    suffix(Suffix,List)
Mode and number of proofs:
    suffix(?list,@list) - zero_or_more

valid/1

Term is a valid list of variables.

Compilation flags:
    static

Template:
    valid(Term)
Mode and number of proofs:

valid(@nonvar) - zero_or_one

---

check/1

Checks if a term is a valid list of variables. Throws an exception if the term is not valid.

Compilation flags:
    static

Template:
    check(Term)
Mode and number of proofs:
    check(@nonvar) - one

Public predicates

generate/1

Generates a new ULID.

Compilation flags:
  static

Template:
  generate(ULID)
Mode and number of proofs:
  generate(--ulid) - one

generate/2

Generates a new ULID from a timestamp (number of milliseconds since the Unix epoch: 00:00:00 UTC on January 1, 1970).

Compilation flags:
    static

Template:
    generate(Milliseconds,ULID)
Mode and number of proofs:
    generate(+integer,--ulid) - one

---

generate/8

Generates a new ULID from a timestamp discrete components.

Compilation flags:
    static

Template:
    generate(Year,Month,Day,Hours,Minutes,Seconds,Milliseconds,ULID)
Mode and number of proofs:
    generate(+integer,+integer,+integer,+integer,+integer,+integer,+integer,--ulid) - one

---

timestamp/2

Returns the given ULID timestamp (number of milliseconds since the Unix epoch: 00:00:00 UTC on January 1, 1970).

Compilation flags:
    static

Template:
    timestamp(ULID,Milliseconds)
Mode and number of proofs:
    timestamp(++ulid,-integer) - one

timestamp/8

Decodes a ULID into its timestamp discrete components.

Compilation flags:
    static

Template:
    timestamp(ULID,Year,Month,Day,Hours,Minutes,Seconds,Milliseconds)
Mode and number of proofs:
    timestamp(++ulid,-integer,-integer,-integer,-integer,-integer,-integer,-integer) - one

protocol

1.73.2 union_find_protocol

Union-find data structure protocol.

Availability:
    logtalk_load(union_find(loader))

Author: José Antonio Riaza Valverde; adapted to Logtalk by Paulo Moura
Version: 1:0:0
Date: 2022-02-17

Compilation flags:
    static

Dependencies:
    (none)

Remarks:
    (none)

Inherited public predicates:
    (none)

- Public predicates
    - new/2
    - make_set/3
    - union/4
    - union_all/3
    - find/4
    - find/5
    - disjoint_sets/2
- Protected predicates
- Private predicates
- Operators

Public predicates

new/2

Creates a new union-find data structure with a list of elements as keys.

Compilation flags:
    static

Template:
    new(Elements,UnionFind)
Mode and number of proofs:
    new(+list(element),?union_find) - zero_or_one

---

make_set/3

Makes a new set by creating a new element with a unique key Element, a rank of 0, and a parent pointer to itself. The parent pointer to itself indicates that the element is the representative member of its own set.

Compilation flags:
    static

Template:
    make_set(UnionFind,Element,NewUnionFind)

Mode and number of proofs:
    make_set(+union_find,+element,?union_find) - zero_or_one

---

union/4

Merges the two trees, if distinct, that contain the given elements. The trees are joined by attaching the shorter tree (by rank) to the root of the taller tree. Fails if any of the elements is not found.

Compilation flags:
    static

Template:
    union(UnionFind,Element1,Element2,NewUnionFind)

Mode and number of proofs:
    union(+union_find,+element,+element,?union_find) - zero_or_one

---

union_all/3

Merges the distinct trees for all the given elements returning the resulting union-find data structure. Fails if any of the elements is not found.

Compilation flags:
    static

Template:
    union_all(UnionFind,Elements,NewUnionFind)

Mode and number of proofs:

union_all(+union_find,+list(element),?union_find) - zero_or_one

---

find/4

Finds the root element of a set by following the chain of parent pointers from the given element. Root is the representative member of the set to which the element belongs, and may be element itself. Fails if the element is not found.

Compilation flags:
    static

Template:
    find(UnionFind,Element,Root,NewUnionFind)
Mode and number of proofs:
    find(+union_find,+element,?element,?union_find) - zero_or_one

Remarks:

• Path compression: The structure of the tree containing the element is flattened by making every node point to the root whenever this predicate is used on it.

---

find/5

Same as the find/4 predicate, but returning also the rank of the root. Fails if the element is not found.

Compilation flags:
    static

Template:
    find(UnionFind,Element,Root,Rank,UnionFindOut)
Mode and number of proofs:
    find(+union_find,+element,?element,?rank,?union_find) - zero_or_one

Remarks:

• Path compression: The structure of the tree containing the element is flattened by making every node point to the root whenever this predicate is used on it.

---

disjoint_sets/2

Returns the list of disjoint sets in the given union-find data structure.

Compilation flags:
    static

Template:
    disjoint_sets(UnionFind,Sets)
Mode and number of proofs:
    disjoint_sets(+union_find,?sets) - zero_or_one

Public predicates

uuid_v1/2

Returns a version 1 UUID for the given MAC address (a list of six bytes). The MAC address can be replaced by a random 6 bytes node identifier as per RFC 4122 when the MAC address is not available or should not be disclosed.

Compilation flags:
> static

Template:
> uuid_v1(MAC,UUID)

Mode and number of proofs:
> uuid_v1(+list(byte),--ground) - one

uuid_v4/1

Returns a version 4 UUID.

Compilation flags:
    static

Template:
    uuid_v4(UUID)
Mode and number of proofs:
    uuid_v4(--ground) - one

---

uuid_null/1

Returns the null UUID.

Compilation flags:
    static

Template:
    uuid_null(UUID)
Mode and number of proofs:
    uuid_null(--ground) - one

---

random_node/1

Generates a list with six random bytes that can be used in alternative to a MAC address when generating version 1 UUIDs.

Compilation flags:
    static

Template:
    random_node(Node)
Mode and number of proofs:
    random_node(--list(byte)) - one

Protected predicates

1.76 wrapper

object

1.76.1 wrapper

Adviser tool for porting and wrapping plain Prolog applications.

Availability:

logtalk_load(wrapper(loader))

Author: Paulo Moura
Version: 0:12:2
Date: 2024-05-10

Compilation flags:
    static, context_switching_calls

Implements:
    public expanding
Provides:
    logtalk::message_hook/4
    logtalk::message_prefix_stream/4
    logtalk::message_tokens//2
Uses:
    logtalk
    os

Remarks:

- prolog_extensions(Extensions) option: List of file name extensions used to recognize Prolog source files (default is ['.pl','.pro','.prolog']).

- logtalk_extension(Extension) option: Logtalk file name extension to be used for the generated wrapper files (default is '.lgt').

- exclude_files(Files) option: List of Prolog source files names to exclude (default is []).

- exclude_directories(Files) option: List of sub-directory names to exclude (default is []).

- include_wrapped_files(Boolean): Generate include/1 directives for the wrapped Prolog source files (default is true).

Inherited public predicates:

Public predicates

rdirectory/2

Advises the user on missing directives for converting all plain Prolog files in a directory and its sub-directories to Logtalk objects using the specified options.

Compilation flags:
    static

Template:
    rdirectory(Directory,Options)
Mode and number of proofs:
    rdirectory(+atom,+list(compound)) - one

rdirectory/1

Advises the user on missing directives for converting all plain Prolog files in a directory and its sub-directories to Logtalk objects using default options.

Compilation flags:
    static

Template:
    rdirectory(Directory)
Mode and number of proofs:
    rdirectory(+atom) - one

---

directory/2

Advises the user on missing directives for converting all plain Prolog files in a directory to Logtalk objects using the specified options.

Compilation flags:
    static

Template:
    directory(Directory,Options)
Mode and number of proofs:
    directory(+atom,+list(compound)) - one

---

directory/1

Advises the user on missing directives for converting all plain Prolog files in a directory to Logtalk objects using default options.

Compilation flags:
    static

Template:
    directory(Directory)
Mode and number of proofs:

directory(+atom) - one

---

directories/2

Advises the user on missing directives for converting all Prolog files in a set of directories to Logtalk objects using the specified options.

Compilation flags:
    static

Template:
    directories(Directories,Options)
Mode and number of proofs:
    directories(+list(atom),+list(compound)) - one

---

directories/1

Advises the user on missing directives for converting all Prolog files in a set of directories to Logtalk objects using default options.

Compilation flags:
    static

Template:
    directories(Directories)
Mode and number of proofs:
    directories(+list(atom)) - one

---

files/2

Advises the user on missing directives for converting a list of plain Prolog files to Logtalk objects using the specified options.

Compilation flags:
    static

Template:
    files(Files,Options)
Mode and number of proofs:
    files(+list(atom),+list(compound)) - one

---

files/1

Advises the user on missing directives for converting a list of plain Prolog files to Logtalk objects using default options.

Compilation flags:
    static

Template:
    files(Files)
Mode and number of proofs:
    files(+list(atom)) - one

---

file/2

Advises the user on missing directives for converting a plain Prolog file to Logtalk objects using the specified options.

Compilation flags:
    static

Template:
    file(File,Options)
Mode and number of proofs:

file(+atom,+list(compound)) - one

---

file/1

Advises the user on missing directives for converting a plain Prolog file to Logtalk objects using default options.

Compilation flags:
    static

Template:
    file(File)
Mode and number of proofs:
    file(+atom) - one

---

save/1

Saves the generated wrapper objects (plus a loader file per directory) for all advised files using the specified options. The wrapper objects are saved to the same directories that contain the wrapped Prolog files.

Compilation flags:
    static

Template:
    save(Options)
Mode and number of proofs:
    save(+list(compound)) - one

---

save/0

Saves the generated wrapper objects (plus a loader file per directory) for all advised files using default options. The wrapper objects are saved to the same directories that contain the wrapped Prolog files.

Compilation flags:
     static

Mode and number of proofs:
     save - one

default_option/1

Enumerates by backtracking the default options used when generating the wrapper objects.

Compilation flags:
     static

Template:
     default_option(DefaultOption)
Mode and number of proofs:
     default_option(?compound) - zero_or_more

default_options/1

Returns a list of the default options used when generating the wrapper objects.

Compilation flags:
     static

Template:
     default_options(DefaultOptions)
Mode and number of proofs:
     default_options(-list(compound)) - one

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

merge_options/2

Merges the user options with the default options, returning the list of options used when generating the wrapper objects.

Compilation flags:
    static

Template:
    merge_options(UserOptions,Options)
Mode and number of proofs:
    merge_options(+list(compound),-list(compound)) - one

---

predicate_called_but_not_defined_/2

Table of called object predicates that are not locally defined.

Compilation flags:
    dynamic

Template:
    predicate_called_but_not_defined_(Object,Predicate)
Mode and number of proofs:
    predicate_called_but_not_defined_(?atom,?predicate_indicator) - zero_or_more

---

object_predicate_called_/3

Table of called object predicates.

Compilation flags:
    dynamic

Template:
    object_predicate_called_(Object,Other,Predicate)
Mode and number of proofs:
    object_predicate_called_(?atom,?atom,?predicate_indicator) - zero_or_more

---

module_predicate_called_/3

Table of called module predicates.

Compilation flags:
    dynamic

Template:
    module_predicate_called_(Object,Module,Predicate)
Mode and number of proofs:
    module_predicate_called_(?atom,?atom,?predicate_indicator) - zero_or_more

---

unknown_predicate_called_/2

Table of predicates called but not defined.

Compilation flags:
    dynamic

Template:
    unknown_predicate_called_(Object,Predicate)
Mode and number of proofs:
    unknown_predicate_called_(?atom,?predicate_indicator) - zero_or_more

---

missing_predicate_directive_/3

Table of missing predicate directives.

Compilation flags:
    dynamic

Template:
    missing_predicate_directive_(Object,Directive,Predicate)
Mode and number of proofs:
    missing_predicate_directive_(?atom,?predicate_indicator,?predicate_indicator) - zero_or_more

---

non_standard_predicate_call_/2

Table of called non-standard predicates.

Compilation flags:
    dynamic

Template:
    non_standard_predicate_call_(Object,Predicate)
Mode and number of proofs:
    non_standard_predicate_call_(?atom,?predicate_indicator) - zero_or_more

---

dynamic_directive_/3

Table of declared dynamic predicates.

Compilation flags:
    dynamic

Template:
    dynamic_directive_(Object,Line,Predicate)
Mode and number of proofs:
    dynamic_directive_(?atom,?integer,?predicate_indicator) - zero_or_more

---

multifile_directive__/3

Table of declared multifile predicates.

Compilation flags:
    dynamic

Template:
    multifile_directive__(Object,Line,Predicate)
Mode and number of proofs:
    multifile_directive__(?atom,?integer,?predicate_indicator) - zero_or_more

---

add_directive_before_entity__/2

Table of directives to be added before the entity opening directive.

Compilation flags:
    dynamic

Template:
    add_directive_before_entity__(Object,Directive)
Mode and number of proofs:
    add_directive_before_entity__(?atom,?predicate_indicator) - zero_or_more

---

add_directive__/2

Table of directives to be added.

Compilation flags:
    dynamic

Template:
    add_directive__(Object,Directive)
Mode and number of proofs:
    add_directive__(?atom,?predicate_indicator) - zero_or_more

---

add_directive_/3

Table of directives to be added to complement existing directives.

Compilation flags:
    dynamic

Template:
    add_directive_(Object,Directive,NewDirective)
Mode and number of proofs:
    add_directive_(?atom,?predicate_indicator,?predicate_indicator) - zero_or_more

---

remove_directive_/2

Table of directives to be removed.

Compilation flags:
    dynamic

Template:
    remove_directive_(Object,Directive)
Mode and number of proofs:
    remove_directive_(?atom,?predicate_indicator) - zero_or_more

---

file_being_advised_/4

Table of files being advised are respective directories and names (basename without extension).

Compilation flags:
    dynamic

Template:
    file_being_advised_(File,Path,Directory,Name)
Mode and number of proofs:
    file_being_advised_(?atom,?atom,?atom,?atom) - zero_or_more

---

Operators

(none)

1.77 xml_parser

object

1.77.1 xml

Bi-directional XML parser.

Availability:
    logtalk_load(xml_parser(loader))

Author: John Fletcher; adapted to Logtalk by Paulo Moura.
Version: 3:8:4
Date: 2024-03-14

Copyright: Copyright (C) 2001-2005 Binding Time Limited, Copyright (C) 2005-2013 John Fletcher
License: This program is offered free of charge, as unsupported source code. You may use it, copy it, distribute it, modify it or sell it without restriction, but entirely at your own risk.

Compilation flags:
    static, context_switching_calls

Uses:
    list
    term

Remarks:

- On-line documentation: https://binding-time.co.uk/index.php/Parsing_XML_with_Prolog

- Compliance: This XML parser supports a subset of XML suitable for XML Data and Worldwide Web applications. It is neither as strict nor as comprehensive as the XML 1.0 Specification mandates.

- Compliance-strictness: It is not as strict, because, while the specification must eliminate ambiguities, not all errors need to be regarded as faults, and some reasonable examples of real XML usage would have to be rejected if they were.

- Compliance-comprehensive: It is not as comprehensive, because, where the XML specification makes provision for more or less complete DTDs to be provided as part of a document, xml.pl actions the local definition of ENTITIES only. Other DTD extensions are treated as commentary.

- Bi-directional conversions: Conversions are not fully symmetrical as weaker XML is accepted than can be generated. Notably, in-bound (Codes -> Document) parsing does not require strictly well-formed XML. If Codes does not represent well-formed XML, Document is instantiated to the term malformed(<attributes>,<content>).

Inherited public predicates:

(none)

- Public predicates
  - parse/2

  - exception/4
  - document_generation//2
  - pcdata_7bit//1
  - character_data_format/3
  - cdata_generation//1
- Operators

Public predicates

parse/2

Parses a list of character codes to/from a data structure of the form xml(<atts>,<content>).

Compilation flags:

static

Template:

 parse(Codes,Document)

Mode and number of proofs:

 parse(+list(character_code),?nonvar) - zero_or_one

 parse(?list(character_code),+nonvar) - zero_or_one

---

parse/3

Parses a list of character codes to/from a data structure of the form xml(<atts>,<content>) using the given list of options.

Compilation flags:

 static

Template:

 parse(Options,Codes,Document)

Mode and number of proofs:

 parse(++list(compound),+list(character_code),?nonvar) - zero_or_one

 parse(++list(compound),?list(character_code),+nonvar) - zero_or_one

Remarks:

- extended_characters(Boolean) option: Use the extended character entities for XHTML (default true).
- format(Boolean) option: For parsing, strip layouts when no character data appears between elements (default true). For generating, indent the element content (default true).
- remove_attribute_prefixes(Boolean) option: Remove namespace prefixes from attributes when it's the same as the prefix of the parent element (default false).
- allow_ampersand(Boolean) option: Allow unescaped ampersand characters (&) to occur in PCDATA (default false).

---

subterm/2

Unifies Subterm with a sub-term of XMLTerm. Note that XMLTerm is a sub-term of itself.

Compilation flags:

 static

Template:

subterm(XMLTerm,Subterm)

Mode and number of proofs:

subterm(+nonvar,?nonvar) - zero_or_one

---

pp/1

Pretty prints a XML document on the current output stream.

Compilation flags:

static

Template:

pp(XMLDocument)

Mode and number of proofs:

pp(+nonvar) - zero_or_one

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

xml_to_document/3

Translates the list of character codes XML into the Prolog term Document. Options is a list of terms controlling the treatment of layout characters and character entities.

Compilation flags:

static

Template:

xml_to_document(Options,XML,Document)

Mode and number of proofs:

xml_to_document(+nonvar,+nonvar,?nonvar) - zero_or_one

---

empty_map/1

True if Map is a null map.

Compilation flags:
    static

Template:
    empty_map(Map)
Mode and number of proofs:
    empty_map(?nonvar) - zero_or_one

---

map_member/3

True if Map is a ordered map structure which records the pair Key-Data. Key must be ground.

Compilation flags:
    static

Template:
    map_member(Key,Map,Data)
Mode and number of proofs:
    map_member(+nonvar,+nonvar,?nonvar) - zero_or_one

---

map_store/4

True if Map0 is an ordered map structure, Key must be ground, and Map1 is identical to Map0 except that the pair Key-Data is recorded by Map1.

Compilation flags:
    static

Template:
    map_store(Map0,Key,Data,Map1)
Mode and number of proofs:
    map_store(+nonvar,+nonvar,+nonvar,?nonvar) - zero_or_one

pp_string/1

Prints String onto the current output stream. If String contains only 7-bit chars it is printed in shorthand quoted format, otherwise it is written as a list.

Compilation flags:
   static

Template:
   pp_string(String)

Mode and number of proofs:
   pp_string(+nonvar) - zero_or_one

fault/5

Identifies SubTerm as a sub-term of Term which cannot be serialized after Indentation. Message is an atom naming the type of error; Path is a string encoding a list of SubTerm's ancestor elements in the form <tag>{(id)}* where <tag> is the element tag and <id> is the value of any attribute __named__ id.

Compilation flags:
   static

Template:
   fault(Term,Indentation,SubTerm,Path,Message)

Mode and number of proofs:
   fault(+nonvar,+nonvar,?nonvar,?nonvar,?nonvar) - zero_or_one

exception/4

Hook to raise an exception to be raised in respect of a fault in the XML Term Document.

Compilation flags:
   static

Template:

exception(Message,Document,Culprit,Path)

Mode and number of proofs:

    exception(+atom,+nonvar,+nonvar,+nonvar) - one

---

document_generation//2

DCG generating Document as a list of character codes. Format is true|false defining whether layouts, to provide indentation, should be added between the element content of the resultant "string". Note that formatting is disabled for elements that are interspersed with pcdata/1 terms, such as XHTML's 'inline' elements. Also, Format is over-ridden, for an individual element, by an explicit 'xml:space'="preserve" attribute.

Compilation flags:

    static

Template:

    document_generation(Format,Document)

Mode and number of proofs:

    document_generation(+nonvar,+nonvar) - zero_or_one

---

pcdata_7bit//1

Represents the ASCII character set in its simplest format, using the character entities &, ", <, and > which are common to both XML and HTML. The numeric entity ' is used in place of ' because browsers don't recognize it in HTML.

Compilation flags:

    static

Template:

    pcdata_7bit(Code)

Mode and number of proofs:

    pcdata_7bit(?nonvar) - zero_or_one

---

character__data__format/3

Holds when Format0 and Format1 are the statuses of XML formatting before and after Codes - which may be null.

Compilation flags:
>   static

Template:
>   character__data__format(Codes,Format0,Format1)

Mode and number of proofs:
>   character__data__format(+nonvar,+nonvar,?nonvar) - zero__or__one

---

cdata__generation//1

Holds when Format0 and Format1 are the statuses of XML formatting before and after Codes - which may be null.

Compilation flags:
>   static

Template:
>   cdata__generation(Codes)

Mode and number of proofs:
>   cdata__generation(+list) - zero__or__one

Operators

(none)

1.78 zippers

protocol

1.78.1 zipperp

Zipper protocol.

Availability:

Public predicates

zip/2

Adds a zipper to a compound term holding a sequence of elements. Fails if the sequence is empty.

Compilation flags:
    static

Template:
    zip(Sequence,Zipper)
Mode and number of proofs:
    zip(+sequence,--zipper) - zero_or_one

---

zip/3

Adds a zipper to a compound term holding a sequence of elements. Also returns the first element. Fails if the sequence is empty.

Compilation flags:
    static

Template:
    zip(Sequence,Zipper,First)
Mode and number of proofs:
    zip(+sequence,--zipper,--term) - zero_or_one

---

unzip/2

Removes a zipper from a sequence.

Compilation flags:
    static

Template:
    unzip(Zipper,Sequence)
Mode and number of proofs:
    unzip(@zipper,--sequence) - one

---

current/2

Current element.

Compilation flags:
    static

Template:
    current(Zipper,Current)
Mode and number of proofs:
    current(+zipper,?term) - zero_or_one

---

next/2

Moves to the next element. Fails if already at the last elements.

Compilation flags:
    static

Template:
    next(Zipper,NewZipper)
Mode and number of proofs:
    next(+zipper,--zipper) - zero_or_one

---

next/3

Moves to and returns the next element. Fails if already at the last elements.

Compilation flags:
    static

Template:
    next(Zipper,NewZipper,Next)
Mode and number of proofs:
    next(+zipper,--zipper,-term) - zero_or_one

---

previous/2

Moves to the previous element. Fails if already at the first elements.

Compilation flags:
    static

Template:
    previous(Zipper,NewZipper)
Mode and number of proofs:
    previous(+zipper,--zipper) - zero_or_one

---

previous/3

Moves to and returns the previous element. Fails if already at the first element.

Compilation flags:
    static

Template:
    previous(Zipper,NewZipper,Previous)
Mode and number of proofs:
    previous(+zipper,--zipper,-term) - zero_or_one

---

rewind/2

Rewinds the zipper so that the first element becomes the current element.

Compilation flags:
    static

Template:
    rewind(Zipper,NewZipper)
Mode and number of proofs:
    rewind(+zipper,--zipper) - one

---

rewind/3

Rewinds the zipper so that the first element becomes the current element. Also returns the first element.

Compilation flags:
    static

Template:
    rewind(Zipper,NewZipper,First)
Mode and number of proofs:
    rewind(+zipper,--zipper,?term) - zero_or_one

---

forward/2

Forward the zipper so that the last element becomes the current element.

Compilation flags:
    static

Template:
    forward(Zipper,NewZipper)
Mode and number of proofs:
    forward(+zipper,--zipper) - one

---

forward/3

Forward the zipper so that the last element becomes the current element. Also returns the last element.

Compilation flags:
    static

Template:
    forward(Zipper,NewZipper,Last)
Mode and number of proofs:
    forward(+zipper,--zipper,?term) - zero_or_one

---

apply/2

Applies a closure to the current element.

Compilation flags:
    static

Template:
    apply(Closure,Zipper)
Meta-predicate template:
    apply(1,*)
Mode and number of proofs:
    apply(+callable,+zipper) - zero_or_more

insert_before/3

Inserts an element before the current one.

Compilation flags:
    static

Template:
    insert_before(Zipper,Element,NewZipper)
Mode and number of proofs:
    insert_before(+zipper,?term,--zipper) - zero_or_one

insert_after/3

Inserts an element after the current one.

Compilation flags:
    static

Template:
    insert_after(Zipper,Element,NewZipper)
Mode and number of proofs:
    insert_after(+zipper,?term,--zipper) - zero_or_one

replace/3

Replaces the current element with a new element.

Compilation flags:
    static

Template:
    replace(Zipper,NewCurrent,NewZipper)
Mode and number of proofs:

replace(+zipper,?term,--zipper) - one

---

delete_and_previous/2

Deletes the current element and moves to the previous element. Fails if no previous element exists.

Compilation flags:
    static

Template:
    delete_and_previous(Zipper,NewZipper)
Mode and number of proofs:
    delete_and_previous(+zipper,--zipper) - zero_or_one

---

delete_and_next/2

Deletes the current element and moves to the next element. Fails if no next element exists.

Compilation flags:
    static

Template:
    delete_and_next(Zipper,NewZipper)
Mode and number of proofs:
    delete_and_next(+zipper,--zipper) - zero_or_one

---

delete_and_unzip/2

Deletes the current element and removes the zipper returning the resulting sequence.

Compilation flags:
    static

Template:

delete_and_unzip(Zipper,Sequence)

Mode and number of proofs:

delete_and_unzip(+zipper,--sequence) - one

---

delete_all_before/2

Deletes all elements before the current element.

Compilation flags:

static

Template:

delete_all_before(Zipper,NewZipper)

Mode and number of proofs:

delete_all_before(+zipper,--zipper) - one

---

delete_all_before_and_unzip/2

Deletes all elements before the current element and removes the zipper returning the resulting sequence.

Compilation flags:

static

Template:

delete_all_before_and_unzip(Zipper,NewZipper)

Mode and number of proofs:

delete_all_before_and_unzip(+zipper,--sequence) - one

---

delete_all_after/2

Deletes all elements after the current element.

Compilation flags:
    static

Template:
    delete_all_after(Zipper,NewZipper)
Mode and number of proofs:
    delete_all_after(+zipper,--zipper) - one

---

delete_all_after_and_unzip/2

Deletes all elements after the current element and removes the zipper returning the resulting sequence.

Compilation flags:
    static

Template:
    delete_all_after_and_unzip(Zipper,NewZipper)
Mode and number of proofs:
    delete_all_after_and_unzip(+zipper,--sequence) - one

Public predicates

zip_at_index/4

Adds a zipper to a list opened at the given index and also returns the element at the index. Fails if the list is empty or the index (starting at 1) does not exist.

Compilation flags:
    static

Template:
    zip_at_index(Index,List,Zipper,Element)
Mode and number of proofs:
    zip_at_index(+natural,+list,--zipper,--term) - zero_or_one

Protected predicates

(no local declarations; see entity ancestors if any)

Private predicates

(no local declarations; see entity ancestors if any)

Operators

(none)

DIRECTORIES

To load an entity, always load the library that includes it using the goal logtalk_load(library_name(loader)) instead of using its path. The library loader file ensures that all the required dependencies are also loaded and that any required flags are used. The loading goal can be found in the entity documentation.

ENTITIES

To load an entity, always load the library that includes it using the goal logtalk_load(library_name(loader)) instead of loading just the entity. The library loader file ensures that all the required dependencies are also loaded and that any required flags are used. The loading goal can be found in the entity documentation.

3.1 Categories

3.2 Objects

3.3 Protocols

PREDICATES

This index lists all entities declaring a given predicate. To load an entity providing the predicate that you want to call, always load the library that includes it using the goal logtalk_load(library_name(loader)) instead of loading just the entity. The library loader file ensures that all the required dependencies are also loaded and that any required flags are used. The loading goal can be found in the entity documentation.
